## Acknowledgments

Many persons participated in the diverse activities of the 1980 census. These acknowledgments generally reflect staff during the post-census data publication process. The Bureau was guided by Director, **Bruce Chapman** and Deputy Director, **C. L. Kincannon**. Primary direction of the data publication program was performed by **William P. Butz**, Associate Director for Demographic Fields, assisted by **Peter A. Bounpane**, Assistant Director for Demographic Census, in conjunction with **Barbara A. Bailar**, Associate Director for Statistical Standards and Methodology, **Howard N. Hamilton**, Acting Associate Director for Information Technology, **James D. Lincoln**, then Associate Director for Administration, and **Stanley D. Moore**, Associate Director for Field Operations. The Director's staff was assisted by **Sherry L. Courtland**. Direction of the census enumeration and early processing activities was provided by **Vincent P. Barabba**, former Director; **Daniel B. Levine**, former Deputy Director; and **George E. Hall**, former Associate Director.

Responsibility for the overall planning, coordinating, processing, and publication of the 1980 census was in the Decennial Census Division under the direction of **Stanley D. Matchett**, Chief, assisted by **Rachel F. Brown** and **Roger O. Lepage**, Assistant Division Chiefs. The following Branch Chiefs were responsible for support services: **Donald R. Dalzell**, **Stephen E. Goldman**, **Judith A. McKay**, **Dennis W. Stoudt**, and **Richard R. Warren**. The Outlying Areas Branch was under the direction of **Irma F. Harahush**, Acting Chief.

Responsibility for developing the housing portion of the 1980 census questionnaire content, designing the tabulations, and preparing this report was in the Housing Division under the supervision of **Arthur F. Young**, Chief, **Leonard J. Norry**, Assistant Chief, and **William A. Downs**, Branch Chief. This report was prepared by **Robert W. Bonnette**, **Sherry A. Briscoe**, and **Higinio Feliciano**. Important contributions were made by **Carmina F. Young**, Special Assistant.

Administration support was provided by the Administrative Services Division, **Robert L.**

**Kirkland**, Chief, and **William C. Fanning**, Assistant Chief.

Computer processing was performed in the Computer Operations Division, **C. Thomas DiNenna**, Chief, **James E. Steed**, **George M. Bowden**, and **Joseph J. Sferrella**, Assistant Chiefs.

Questionnaire processing procedures were developed in the Decennial Processing Staff, **James S. Werking**, then Chief, under the direction of **Harry O'Haver**, then Assistant Chief. The clerical coding and microfilming of the sample questionnaires were performed at the Laguna Niguel Processing Office, **Robert N. Scheller**, Chief.

User services were provided by the Data User Services Division under the supervision of **Michael G. Garland**, Chief, **Marshall L. Turner, Jr.**, and **Paul T. Zeisset**, Assistant Chiefs.

Data collection activities were supervised in the Field Division by **Lawrence T. Love**, Chief, under the direction of **Richard Blass**, **Charles Hancock**, and **George T. Reiner**, Assistant Chiefs, with the assistance of the directors and assistant directors of the Bureau's regional offices.

Geographic programs and plans were developed in the Geography Division under the direction of **Robert W. Marx**, Chief; **Joseph J. Knott** and **Silla G. Tomasi**, Assistant Chiefs; and **Donald I. Hirschfeld**, Special Assistant.

Publications editing, design, composition, and printing procurement were performed by the staff of the Publications Services Division, **Raymond J. Koski**, Chief; **Milton S. Andersen**, **Arlene C. Duckett**, and **Gerald A. Mann**, Branch Chiefs.

The Statistical Methods Division was largely responsible for weighting sample data and producing variance estimates. This work was supervised by **Charles D. Jones**, Chief; **Susan M.**

**Miskura** and **Robert T. O'Reagan**, Assistant Chiefs. Important contributions were made by **David H. Diskin**, **Milton C. Fan**, **Thomas W. Harahush**, **Robert S. Jewett**, **J. Kim**, **Teresa A. Passalacqua**, **John H. Thompson**, and **Henry F. Woltman**.

The system design, technical specifications, assembly, and installation of the FOSDIC and Automated Camera Technology System were the responsibility of the Technical Services Division, **C. Thomas DiNenna**, Acting Chief, and **Robert J. Varson**, Branch Chief.

Many other persons participated in the various activities of the 1980 census. For a list of key personnel, refer to the *History of the 1980 Census of Population and Housing*, (PHC80-R2).

### GENERAL

This report is part of the *Detailed Housing Characteristics* series and presents sample data from the 1980 Census of Population and Housing on detailed characteristics of housing units for Puerto Rico, classified by urban and rural residence and by size of place, its municipios, places of 2,500 or more inhabitants, standard consolidated statistical areas, standard metropolitan statistical areas, urbanized areas, and certain other geographic areas. The abbreviated identification for this report is HC80-1-B (i.e., Housing Census, 1980-Volume 1-Chapter B) followed by the number 53 representing Puerto Rico. Legal provision for this census, which was conducted as of April 1, 1980, was made in the Act of Congress of August 31, 1954 (amended August 1957, December 1975, and October 1976), which codified Title 13, United States Code.

A large portion of the Housing information compiled from the 1980 Census of Population and Housing will appear in Volume 1, *Characteristics of Housing Units*, of which this report is part.

The total housing unit and population counts for the various geographic entities shown here may differ from those shown in the *Advance Reports*, PHC80-V. The differences reflect correction of errors found after the PHC80-V reports were prepared. The changes may affect any

geographic area shown in this report. Small differences may also result from the weighting techniques used to inflate the sample figures shown in this report to 100-percent totals. For further discussion of the estimation procedure, see appendix D.

The content and procedures of the 1980 census were determined after evaluation of the results of the 1970 census, consultation with a wide variety of users of census data, and extensive field testing. A number of changes were introduced in 1980 to improve the usefulness of the census results. The changes do not, however, affect to any appreciable extent the comparability between the 1980 census data and the 1970 census data shown for most characteristics. Further information on comparability appears in Appendix B, "Definitions and Explanations of Subject Characteristics."

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233. Such information will also appear in other publications of the 1980 census.

### CONTENTS OF THE REPORT

This report contains text (this introduction and 5 appendixes), a table of contents, 26 detailed tables, and 3 allocation tables.

A map of Puerto Rico appears after the table of contents and shows municipio names and boundaries, the names and boundaries of standard consolidated statistical areas (SCSA's) and standard metropolitan statistical areas (SMSA's), the names and locations of all places with a population of 25,000 or more, and

SMSA central cities with fewer than 25,000 inhabitants. Then follow the detailed tables and the tables covering allocations. The first table in this report is table 18; tables 1 to 17 appear in the *General Housing Characteristics*, HC80-1-A, report for Puerto Rico.

Each table is identified by a table number and title. The "stubhead" at the left under the title defines the types of geographic areas for which data are shown in the particular table and is considered part of the table title.

A table finding guide lists the characteristics covered in this report and shows the tables in which the various types of statistics appear.

The amount of detail presented in this report is generally greater for larger places than for smaller ones. The greatest amount of detail is shown for Puerto Rico and its urban and rural parts and for SCSA's, SMSA's, urbanized areas, places with a population of 10,000 or more, and municipios. Somewhat less detail is shown for places of 2,500 to 10,000 and for rural and rural farm portions of municipios.

Appearing last in the report are the appendixes. Appendix A describes the various area classifications (e.g., urban and rural residence, census designated places, and urbanized areas). Appendix B provides definitions and explanations for the subjects covered in this report. Appendix C briefly explains the residence rules used in counting the population and describes the data collection and processing procedures. Appendix D presents information on the sources of error in the data, editing procedures, and a description of allocation tables B-1, B-2, and B-2a. Appendix E contains facsimiles of the 1980 census questionnaire pages showing the population and housing questions.

### DERIVED FIGURES (Medians and Percents)

This report presents medians and percents as well as certain ratios. The median—a type of average—is the middle value in a distribution; i.e., the median divides the distribution into two equal parts: one-half of the cases fall below the median and one-half of the cases exceed the median. Percents and other derived measures which round to less than 0.1 are not shown but indicated as zero (i.e., “-”).

Medians for rooms are rounded to the nearest tenth, for persons to the nearest hundredth, for value to the nearest hundred dollar and for income, selected monthly owner costs, contract rent, and gross rent to the nearest dollar. In computing medians for rooms and persons in unit, the whole number is used as the midpoint of the interval so that, for example, the category “3 rooms” is treated as an interval ranging from 2.5 to 3.5 rooms. In computing median rent, units reported as “No cash rent” are excluded.

The median is computed on the basis of the distribution as tabulated, which is sometimes more detailed than the distribution shown in this report. When the median falls in the lower terminal category of an open-ended distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus, for example, if the median falls in the category “Less than \$2,000,” it is shown as “\$2,000-.” When the median falls in the upper terminal category of an open-ended distribu-

tion, the initial value of the terminal category is given followed by a plus sign; thus, for example, if the median falls in the category “\$100,000 or more,” it is shown as “\$100,000+.”

### SYMBOLS AND GEOGRAPHIC ABBREVIATIONS

The following symbols and geographic abbreviations are used in the tables:

- A dash “-” represents zero or a percent which rounds to less than 0.1.
- Three dots “...” mean not applicable, or that the data are being withheld to avoid disclosure of information for individual housing units. (For further information on disclosure, see the section below on “Suppression of Data for Confidentiality.”)
- (NA) means not available.
- SCSA is standard consolidated statistical area.
- SMSA is standard metropolitan statistical area.

### SUPPRESSION OF DATA FOR CONFIDENTIALITY

To maintain the confidentiality promised respondents and required by law, the Census Bureau takes precautions that its published data do not disclose information about specific individuals and housing units. To accomplish this, the Census Bureau suppresses data for characteristics which are based on a small number of persons and/or housing units in the geo-

graphic areas. Under certain conditions, both primary and complementary suppression, as defined below, may take place.

The general rules of primary suppression of sample data are as follows: estimates of total population are never suppressed; other characteristics for persons are shown only if there are 30 or more persons in the geographic area; estimates of total housing units, vacant housing units, year-round housing units, and occupied housing units are never suppressed; characteristics of year-round housing units which are not classified by occupancy status are shown only when there are 10 or more year-round housing units in the geographic area; characteristics of families, households, or occupied housing units are shown only if there are at least 10 occupied housing units within the geographic area; and distributions of data for owners or renters are shown only where the number of owners is at least 10 and the number of renters is also at least 10. These primary suppression criteria are applied independently of one another. The comparable figures for complete count (100-percent) data are 15 or more persons and 5 or more housing units of the specified type.

Finally, complementary suppression is applied to prevent the derivation of primary suppressed data by subtraction. For example, housing unit data shown by tenure may require complementary suppression when the number of owner-occupied or renter-occupied housing units is less than 10.

U.S. Department of Commerce BUREAU OF THE CENSUS

Standard Consolidated Statistical Area, Standard Metropolitan Statistical Areas, Municipios, and Selected Places

#### CORRECTION NOTE

Corrections to the 1980 census counts of the total population and total housing units have been made to some of the areas shown in this report. These corrections can be found in the correction note in the PC80-1-B, General Population Characteristics and the HC80-1-A, General Housing Characteristics reports for Puerto Rico. Any additional corrections made after these reports were printed are available by writing to Data User Services Division, Customer Services (Corrections), Bureau of the Census, Washington, D.C. 20233.

Median income figures for occupied housing units in this report were calculated using linear interpolation. This differs from the methodology used in other 1980 census reports. In the other reports median income figures less than \$20,000 were derived through linear interpolation; median income values of \$20,000 or more were derived using Pareto interpolation.

### PUERTO RICO

The 78 municipios are the constituent units of Puerto Rico.

### MUNICIPIOS

In Puerto Rico, the primary divisions are termed municipios. Each municipio has legally established boundaries and constitutes a governmental unit. Two municipios have been created since 1970, Canóvanas and Florida, which were separated from Loíza and Barceloneta municipios, respectively. Each municipio, with the exception of Florida, contains a ciudad or pueblo in which the seat of government is located. Florida municipio has its seat of government in the Florida Adentro barrio.

### MUNICIPIO SUBDIVISIONS

Statistics are presented for subdivisions of municipios called: ciudades and pueblos.

Barrios are the primary subdivisions of municipios. The barrios have legally established boundaries, but do not constitute a governmental unit. "Ciudad" or "pueblo" is the name given to the barrio or group of barrios which identifies the municipio center of government. Ciudades, pueblos, and barrios essentially serve as election districts and as the basis for apportionment of the Puerto Rico legislature. Many municipio subdivisions have been redefined since 1970 to reflect their legal boundaries, which were not used in many instances in 1970 census reports. There are two ciudades in Puerto Rico, Ponce and San Juan, which consist of groups of barrios.

### PLACES

The Puerto Rico census reports recognize one type of place—the census designated places. These places are identified as zonas urbanas and aldeas.

In this report, central cities of standard metropolitan statistical areas, regardless of population, are shown only in the tables designated ". . . for Areas and Places." Thus, a central city with a population between 10,000 and 50,000 will not appear in the tables for places of 10,000 to 50,000. Places with a 1980 population below 2,500 are not shown in this report.

The stateside census reports recognize, in addition to the census designated places, the incorporated places. Incorporated places recognized in the stateside census reports are those which are incorporated under the laws of their respective States as cities, boroughs, towns, and villages. There are no incorporated places in Puerto Rico. Although ciudades and pueblos in Puerto Rico have legally established limits, they are not incorporated and are recognized for census purposes as municipio subdivisions rather than places.

### Census Designated Places

As in the 1950, 1960, and 1970 censuses, the Census Bureau, in cooperation with

the Puerto Rico government, delineated boundaries for closely settled population centers without corporate limits. In 1980, such places are referred to as "census designated places" (CDP's). In Puerto Rico, the CDP's are identified as "zonas urbanas" and "aldeas." To be recognized for the 1980 census, aldeas must have a minimum 1980 population of 1,000; however, zonas urbanas are recognized regardless of population size.

Census designated place boundaries change with changes in the settlement pattern; a place which has the same name as in previous censuses does not necessarily have the same boundaries. Boundary outlines for CDP's appear on the municipio subdivision map in the HC80-1-A, *General Housing Characteristics* report for Puerto Rico. Detailed maps are available for purchase from the Census Bureau.

**Zonas urbanas**—Zonas urbanas are composed of the municipio seat of government and the adjacent built-up area. Zonas urbanas are delineated by the Puerto Rico Planning Board under authorization of the Puerto Rico Planning Act of 1975. Figures are published for all zonas urbanas regardless of the number of inhabitants. In 1970, zonas urbanas were incorrectly referred to as ciudades and pueblos, and the legal ciudad/pueblo boundaries were not recognized. Zonas urbanas had not been recognized prior to the 1970 census.

**Aldeas**—Aldeas are closely settled population centers with no legally defined limits. The aldea boundaries were delineated by the Puerto Rico Planning Board following procedures established by the Census Bureau.

### URBAN AND RURAL RESIDENCE

As defined for the 1980 census, urban housing comprises all housing units in urbanized areas and in places of 2,500 or more inhabitants outside urbanized areas.

More specifically, urban housing consists of all housing units in (1) places of 2,500 or more inhabitants identified as *zonas urbanas* and *aldeas*; and (2) other territories included in urbanized areas. Housing units not classified as urban constitute rural housing. Information on the historical development of the urban-rural residence definition appears in the 1980 Census of Population Report, *Characteristics of the Population, Number of Inhabitants*, PC80-1-A.

### Farm-Nonfarm Residence

In rural areas, occupied housing units are subdivided into rural-farm housing, which comprises all rural units on farms, and rural-nonfarm housing, which comprises the remaining rural units. Occupied housing units are classified as farm units if they are located on places of 3 *cuerdas* or more on which there are agricultural operations, or on places of less than 3 *cuerdas* from which sales of farm products amounted to \$100 or more in 1979. (See questions H13a and H13b in Appendix E, "Facsimiles of Questionnaire Pages.") The definition of farm for Puerto Rico has remained unchanged since the 1970 census.

Occupied units in rural territory which do not meet the definition for farm housing are classified as nonfarm. All vacant units in rural areas also are classified as nonfarm. Information on nonfarm housing units is not shown separately in this report. It may, however, be obtained by subtracting rural farm from rural.

## URBANIZED AREAS

### Definition

The major objective of the Census Bureau in delineating urbanized areas is to provide a better separation of urban and rural population and housing in the vicinity of large cities. An urbanized area consists of a central city or cities and surrounding closely settled territory or "urban fringe."

The following criteria are used in determining the eligibility and definition of the 1980 urbanized areas:<sup>1</sup>

An urbanized area comprises a place and adjacent densely settled surrounding area that together have a minimum popu-

lation of 50,000.<sup>2</sup> The densely settled surrounding area consists of:

1. Contiguous census designated places having:
  - a. A population of 2,500 or more; or,
  - b. A population of fewer than 2,500 but having a population density of 1,000 persons per square mile, a closely settled area containing a minimum of 50 percent of the population, or a cluster of at least 100 housing units.
2. Contiguous area which is connected by road and has a population density of at least 1,000 persons per square mile.<sup>3</sup>
3. Other contiguous area with a density of less than 1,000 persons per square mile, provided that it:
  - a. Eliminates an enclave of less than 5 square miles which is surrounded by built-up area.
  - b. Closes an indentation in the boundary of the densely settled area that is no more than 1 mile across the open end and encompasses no more than 5 square miles.
  - c. Links an outlying area of qualifying density, provided that the outlying area is:
    - (1) Connected by road to, and is not more than 1½ miles from, the main body of the urbanized area.
    - (2) Separated from the main body of the urbanized area by water or other undevelopable area, is connected by road to the main body of the urbanized area, and is not more than 5 miles from the main body of the urbanized area.
4. Large concentrations of nonresidential urban area (such as industrial parks, office areas, and major airports), which have at least one-quarter of their boundary contiguous to an urbanized area.

A map of each urbanized area in Puerto Rico appears in the 1980 Census of Housing Report for Puerto Rico, HC80-1-A, *General Housing Characteristics*.

<sup>2</sup> For an urbanized area to be recognized, it must include a population of at least 25,000 that does not reside on a military base.

<sup>3</sup> Any area of extensive nonresidential urban land use, such as airports, factories, parks, golf courses, and cemeteries, is excluded in computing the population density.

### Urbanized Area Titles

1. The titles of urbanized areas existing prior to the 1980 Census of Population and Housing are retained unchanged except for mergers and for those areas meeting item 4 of the titling criteria.
2. The titles of new urbanized areas qualifying as the result of the 1980 census are determined as follows:
  - a. The name of the place with the largest population in the urbanized area is always listed.
  - b. The names of up to two additional places may be listed, with eligibility determined as follows:
    - (1) Those with a population of at least 250,000.
    - (2) Those with a population of 15,000 to 250,000, provided that they are at least one-third the population of the largest place in the urbanized area.
3. Area titles that include the names of more than one place start with the name of the largest and list the others in descending order of their population.
4. Regional titles may be used to identify urbanized areas with populations over 1 million, in which case only the largest city of the urbanized area is included in the title.

### Urbanized Area Central Cities

The central cities of urbanized areas are those named in the titles except where regional titles are used. In such cases, the central cities are those that have qualified under items 1 or 2 of the titling criteria.

Counts and data for central cities of urbanized areas refer to the urban portion of these cities.

## STANDARD METROPOLITAN STATISTICAL AREAS

### Definition

The general concept of a metropolitan area is one of a large population nucleus, together with adjacent communities which have a high degree of economic

<sup>1</sup> All references to population counts and densities relate to data from the 1980 census.

and social integration with that nucleus. The standard metropolitan statistical area (SMSA) classification is a statistical standard developed for use by Federal agencies in the production, analysis, and publication of data on metropolitan areas. The SMSA's are designated and defined by the Office of Management and Budget, following a set of official published standards developed by the interagency Federal Committee on Standard Metropolitan Statistical Areas.

Each SMSA in Puerto Rico has one or more central municipios containing the area's main population concentration: an urbanized area with at least 50,000 inhabitants. An SMSA may also include outlying municipios which have close economic and social relationships with the central municipios. The outlying municipios must have a specified level of commuting to the central municipios and must also meet certain standards regarding metropolitan character, such as population density, urban population, and population growth.

The housing units in SMSA's may also be referred to as the metropolitan housing. The housing in SMSA's is subdivided into "inside central city (or cities)" and "outside central city (or cities)." The housing units outside SMSA's constitute the nonmetropolitan housing.

### SMSA Titles

Most SMSA's have at least one central city. The titles of SMSA's include up to three city names. For the 1980 census, central cities of SMSA's are those named in the titles of the SMSA's. In Puerto Rico where there are no incorporated places recognized by the Bureau of the Census, zonas urbanas and aldeas may be recognized as central cities.

In this report, central cities of SMSA's, regardless of population, are shown only in the tables designated "... for Areas and Places." Thus, a central city with a population between 10,000 and 50,000 will not appear in the tables for places of 10,000 to 50,000.

### New SMSA Standards

New standards for designating and defining metropolitan statistical areas were published in the *Federal Register* on January 3, 1980. The SMSA's recognized for the 1980 census comprise (1) all

areas, including four in Puerto Rico, as defined on January 1, 1980, except for one area in the United States which was defined provisionally during the 1970's on the basis of population estimates but whose qualification was not confirmed by 1980 census counts; and (2) 36 new areas, including one in Puerto Rico, defined on the basis of 1980 census counts and the new standards that were published on January 3, 1980.

The new standards will not be applied to the areas existing on January 1, 1980, until after data on commuting flows become available from 1980 census tabulations. At that time, the boundaries, definitions, and titles for all SMSA's will be reviewed.

To aid users who want to become familiar with the SMSA standards and how they are applied, documents are available from the Office of Management and Budget, Washington, D.C. 20503.

### STANDARD CONSOLIDATED STATISTICAL AREAS

In some parts of the country, metropolitan development has progressed to the point that adjoining SMSA's are themselves socially and economically interrelated. These areas are designated standard consolidated statistical areas (SCSA's) by the Office of Management and Budget, and are defined using standards included as part of the new SMSA standards described above.

### RELATIONSHIP BETWEEN URBANIZED AREAS AND METROPOLITAN AREAS

Although the urbanized area and the metropolitan area are closely related in concept, there are important differences. The urbanized area has a more limited territorial extent. The urbanized area consists of the physically continuously built-up territory around each central city and thus corresponds generally to the core of high and medium population density at the heart of the metropolitan area. In concept, a metropolitan area is always larger than its core urbanized area, even if the metropolitan area is defined in terms of small building blocks, because it includes discontinuous urban and suburban development beyond the periphery of the continuously built-up

area. The metropolitan area may also include some rural territory whose residents commute to work in the city or its immediate environs, while the urbanized area does not include such territory. In practice, because the SMSA definitions use municipios as building blocks, considerable amounts of rural territory with few commuters are often included.

Occasionally, a portion of the urbanized area extends across the SMSA boundary into a nonmetropolitan municipio or another SMSA. However, such portions are usually quite small in area and population.

The new SMSA standards provide that each SMSA be associated with an urbanized area. However, the reverse is not true—there are some urbanized areas that are not in any SMSA. This situation occurs when an urbanized area does not qualify as an SMSA of at least 100,000 population and the urbanized area has no city with at least 50,000 population.

In addition, some SMSA's contain more than one urbanized area. This occurs when:

1. Two or more urban concentrations not far apart and of generally similar size have separate urbanized areas but qualify as a single SMSA. Often the SMSA title includes the name of the largest city of each of the component urbanized areas.
2. A very large SMSA includes a large urbanized area and one or more smaller separate urbanized areas within its boundaries.

### BOUNDARY CHANGES

The boundaries of some of the areas shown in this report have changed between an earlier census and January 1, 1980. Information on boundary changes for municipio and municipio subdivisions is presented in table 4 of the 1980 Census of Population Report, *Characteristics of the Population, Number of Inhabitants*, PC80-1-A. For information on boundary changes prior to 1970, see the *Number of Inhabitants* report for each census.

### AREA MEASUREMENTS

Area measurement figures for municipios are available in table 2 of the PC80-1-A report for Puerto Rico.

### GENERAL

The 1980 census of Puerto Rico was conducted through a combination of self-enumeration and personal interview. The principal determinant for the responses was, therefore, the questionnaire and its accompanying instructions. Furthermore, census takers were instructed, in their personal-visit interviews, to read the questions directly from the questionnaire. The definitions and explanations given below for each subject are drawn largely from various technical and procedural materials used in the collection of the data. These materials helped the census interviewers to understand more fully the intent of each question, and thus to resolve problems or unusual cases in a manner consistent with this intent. Also, included is certain explanatory information to assist the user in the proper utilization of the statistics.

Facsimiles of the questionnaire pages containing the population and housing questions used to produce the data shown

in this report are presented in Appendix E, "Facsimiles of Questionnaire Pages."

### LIVING QUARTERS

Living quarters are classified in the census as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, boarding house, mobile home or trailer). However, living quarters may also be in structures intended for non-residential use (e.g., the rooms in a warehouse where a night guard lives), as well as in boats, tents, vans, etc.

**Housing Units**—A housing unit is a house, an apartment, a group of rooms, or a single room, occupied as a separate living quarters or, if vacant, intended for occupancy as a separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the next section on Group Quarters). For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing unit inventory except that boats, tents, vans, caves, and the like, are included only if they are occupied as someone's usual place of residence. Vacant mobile homes are included, provided they are intended for occupancy on the site where

they stand. Vacant mobile homes on dealers' sales lots or in storage are excluded from the housing inventory.

**Comparability With 1970 Census Housing Unit Data**—Although the 1980 census data are generally comparable with 1970 census data, certain changes were introduced for 1980. The part of the 1970 housing unit definition that required a unit to have either (1) direct access or (2) cooking facilities for exclusive use was modified. For 1980, the cooking facilities for exclusive use alternative was dropped, and direct access was required of all housing units. In 1970, vacant mobile homes were not counted as housing units. For 1980, they were included in the housing inventory provided they were intended for occupancy on the site where they stood.

**Group Quarters**—Group quarters are any living quarters which are not classified as housing units. There are two types of group quarters: (1) institutional group quarters, and (2) noninstitutional group quarters. Institutional group quarters are living quarters occupied by one or more persons under care or custody, such as children in an orphanage, persons in a nursing home, and prisoners in a penitentiary. Noninstitutional group quarters include living quarters such as college-owned and/or operated dormitories, fraternity and sorority houses, nurses' dormitories, and boarding houses. In addition, noninstitutional group quarters include any living quarters (other than those classified as institutional group quarters) which are occupied by 9 or more persons unrelated to the person listed in column 1 of the census questionnaire, or by 10 or more unrelated persons. Information on the housing characteristics of group quarters was not collected in the census.

**Comparability With 1970 Census Group Quarters Data**—In 1970, a unit was classified as group quarters if it was shared by the person in charge and five or more persons unrelated to him or her, or if there was no person in charge by six or more unrelated persons. For 1980, that requirement was raised to 9 or more persons unrelated to the person listed in column 1 of the census questionnaire or 10 or more unrelated persons.

**Rules for Hotels, Rooming Houses, Etc.**—Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; i.e., persons who consider the hotel as their usual place of residence or who have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have direct access, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain eight or fewer roomers unrelated to the householder, they are classified as one housing unit. If the combined quarters contain nine or more roomers unrelated to the householder or person in charge, they are classified as group quarters.

**Staff Living Quarters**—The living quarters occupied by staff personnel within any group quarters are separate housing units if they satisfy the housing unit criteria of separateness and direct access; otherwise, they are considered as group quarters.

**Year-Round Housing Units**—Data on housing characteristics in the 1980 census reports are limited to year-round housing units; i.e., all occupied units plus vacant units available or intended for year-round use. Vacant units intended for seasonal occupancy are excluded because of the difficulty of obtaining reliable data on their characteristics.

### OCCUPANCY AND VACANCY CHARACTERISTICS

**Occupied Housing Units**—A housing unit is classified as occupied if it is the usual place of residence of the person or group of persons living in it at the time of enumeration, or if the occupants are only temporarily absent; e.g., away on vacation. If all the persons staying in the unit at the time of the census have their usual place of residence elsewhere, the unit is classified as vacant. A household includes all the persons who occupy a housing unit as their usual place of residence. By

definition, therefore, the number of occupied housing units equals the number of households in the 1980 Census of Population reports. In this report the numbers shown for occupied housing units are estimates based on a sample. In some cases there may be small differences in the number shown for households in the Census of Population reports. These differences may result from processing procedures used to inflate the population and housing sample data.

**Householder**—One person in each household is designated as the "householder." In most cases, this is the person, or one of the persons, in whose name the home is owned or rented and who is listed in column 1 of the census questionnaire. If there is no such person in the household, any adult household member could be designated as the "householder."

**Persons in Occupied Housing Units**—"Persons in occupied housing units" is the total population less those persons living in group quarters. "Persons per occupied housing unit" is computed by dividing the population living in housing units by the number of occupied housing units. Data are also presented separately for the population in owner-occupied and in renter-occupied housing units.

**Year Householder Moved Into Unit**—Data presented for this item are based on the information reported for the householder and refer to the year of the latest move. If the householder moved back into a unit the person previously occupied, the year of the latest move was reported. If the householder moved from one apartment to another in the same building, the year the householder moved into the present apartment was reported. The intent is to establish the year the present occupancy by the householder began. The year in which a householder moved is not necessarily the same year as the year other members of the household moved, although in the majority of cases, the entire household moved at the same time. (See question H17 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Vacant Housing Units**—A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. Units temporarily occupied at the time of

Appendix B.—Definitions and Explanations of Subject Characteristics

enumeration entirely by persons who have a usual residence elsewhere are also classified as vacant.

New units not yet occupied are classified as vacant housing units if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Vacant units are excluded if they are open to the elements; i.e., the roof, walls, windows, and/or doors no longer protect the interior from the elements, or if there is positive evidence (such as a sign on the house or in the block) that the unit is to be demolished or is condemned. Also excluded are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory, machinery, or agricultural products.

**Type of Vacant Unit**—Vacant housing units are classified in this report as either "Seasonal" or "Year-round." "Seasonal" units are intended for occupancy during only certain seasons of the year. Included are units intended for recreational use, such as beach cottages and summer cabins, as well as units offered to vacationers in the summer for summer sports. "Year-round" vacant housing units are available or intended for occupancy at any time of the year. A unit in a resort area which is usually occupied on a year-round basis is considered as year-round. A unit used only occasionally throughout the year is also considered as year-round.

**Vacancy Status**—The data on "Vacancy status" were tabulated from responses to questionnaire item C. (See item C in Appendix E, "Facsimiles of Questionnaire Pages.") Year-round vacant units are subdivided according to their vacancy status as follows:

*For sale only.* Vacant year-round units being offered "For sale only," including individual units in cooperatives and condominium projects if the individual units are offered "For sale only."

*For rent.* Vacant year-round units offered "For rent," and vacant units offered either for rent or for sale.

*Other vacants.* If a vacant year-round unit is not "For sale only" or "For

rent," it is classified in the category "Other vacants" in this report. This category includes units held for settlement of an estate, units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner, as well as units rented or sold, awaiting occupancy, and units held for occasional use.

**Duration of Vacancy**—The statistics on "Duration of vacancy" refer to the length of time (in months) from the date the last occupants moved from the unit to the date of enumeration. (See item D in Appendix E, "Facsimiles of Questionnaire Pages.") The data, therefore, do not provide a direct measure of the total length of time units remain vacant. For newly constructed units which have never been occupied, the duration of vacancy is counted from the date construction was completed. For recently converted or merged units, the time is reported from the date conversion or merger was completed.

**Tenure**—A housing unit is "Owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. All other occupied units are classified as "Renter occupied," including units rented for cash rent and those occupied without payment of cash rent. (See question H7 in Appendix E, "Facsimiles of Questionnaire Pages.")

UTILIZATION CHARACTERISTICS

**Persons**—All persons occupying the housing unit are included. These persons include not only occupants related to the householder but also any lodgers, roomers, boarders, roommates, wards, foster children, and resident employees who share the living quarters of the householder. The data on "Persons in unit" show the number of housing units occupied by the specified number of persons.

**Rooms**—The statistics on "Rooms" are in terms of the number of housing units with a specified number of rooms. (See question H6 in Appendix E, "Facsimiles of Questionnaire Pages.") The intent of this question is to count the number of whole rooms used for living purposes.

For each unit they include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, and lodger's rooms. Excluded are strip or pullman kitchens, bathrooms, balconies, halls, laundry rooms, and unfinished space used for storage. A partially divided room is a separate room only if there is a partition from floor to ceiling.

**Persons Per Room**—"Persons per room" is a derived measure obtained by dividing the number of persons in each occupied housing unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of occupied housing units having the specified ratio of persons per room.

**Bedrooms**—The number of "Bedrooms" in the unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping, such as guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a sofa bed, are not considered bedrooms. A housing unit consisting of only one room, such as a one-room efficiency apartment, is classified, by definition, as having no bedroom. (See question H23 in Appendix E, "Facsimiles of Questionnaire Pages.")

STRUCTURAL CHARACTERISTICS

**Year Structure Built**—"Year structure built" refers to when the building was first constructed, not when it was remodeled, added to, or converted. For a houseboat or mobile home or trailer, the manufacturer's model year is assumed to be the year built. The figures shown in this report relate to the number of units in structures built during the specified periods and in existence at the time of enumeration. (See question H16 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Units in Structure**—A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. In the determination of the number of units in a structure,

all housing units, both occupied and vacant, were counted. The statistics are presented for the number of housing units in structures of specified type and size, not for the number of residential buildings. Structures containing only one housing unit are further classified as detached or attached. The category "Mobile home or trailer, etc." includes mobile homes, trailers, boats, tents, vans, etc. (See question H9 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Type of Construction**—Housing units are classified according to the construction of the major part of the structure. Masonry walls refers to walls of poured concrete, concrete or ornamental blocks, stone, brick, or other masonry material. Units in structure with masonry walls are classified by type of roof over the main part of the structure: (1) a "Concrete slab roof" or (2) a "Wood frame roof." A concrete slab roof may be covered with waterproof roofing material. A wood frame roof may be covered by sheet metal, wood with asphalt shingles, or other materials.

In units with wood frame walls, the basic supporting material of the outer walls is wood, which may be covered with wood boards, plywood, or other materials. A "Masonry foundation" most commonly is poured concrete or concrete blocks; it may be stone or other masonry material, or concrete posts or columns. A "Wood stilt foundation" ordinarily consists of wooden posts. "Mixed masonry and wood walls" refers to outer walls with masonry and wood.

"Other type of construction" is anything not described above. It includes makeshift construction and buildings of mixed types of construction. (See question H29 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Condition of Housing Unit**—This item serves as an indicator of the quality of housing. The answers to this question indicate how many living quarters may not provide adequate shelter and, in their present condition, endanger the health, safety, or well-being of their occupants.

The enumerators judged the condition by observation, on the basis of instructions regarding the extent, degree and type of visible defects. The criteria dealt mainly with weather tightness, extent of disrepair, hazards to physical safety of the occupants, and inadequate or make-

shift construction. Defects which would be revealed only by a more thorough inspection than is possible during a census, or would be recognized only by a person with fairly thorough knowledge of construction, were not included in the standards by which condition was rated.

The enumerators were instructed to judge each unit on the basis of its own physical characteristics, regardless of the neighborhood, the attractiveness or dreariness of the unit, the degree of crowding, the house-keeping standards of the occupants, or other considerations unrelated to physical condition.

All living quarters were classified as either of adequate or inadequate original construction. A living quarters is considered to be of adequate original construction if it was initially built with traditional materials (wood, poured concrete, etc.), and it had no serious structural deficiencies or it did not endanger the safety of the occupants. Living quarters classified as of adequate original construction were further classified as either sound, deteriorating, or dilapidated.

"Sound" housing was defined as having no defects or only slight defects of a type normally corrected in the course of regular maintenance. These defects do not affect the weather tightness of the living quarters nor do they endanger the safety or health of the occupants. Examples are: slight damage to doors or shutters, moderately rusted roof, slight wear on floors, doorsills, door-frames, windowsills, or window frames, small cracks in walls and lack of paint.

"Deteriorating" housing has intermediate defects which need repairs beyond the scope of ordinary maintenance. Intermediate defects indicate the need of repairs so that the living quarters will continue to provide safe and adequate shelter. Examples include rotted, broken, or missing material over a small area of the walls or roof; rotted or unsafe steps or balconies; deeply worn floors, door-frames, or stairs; a badly rusted or leaking roof; and loose or broken shutters or doors.

A "dilapidated" unit no longer provides safe and adequate shelter. It has one or more critical defects, such as broken or missing material over a large area of the foundation, exterior walls, roof, floors, etc.; a badly sagging roof, wall, or floors; extensive termite damage;

or has a large number of intermediate defects.

"Inadequate original construction" applies to units built largely of makeshift or scrap materials (scrap lumber or sheet metal, packing boxes, etc.) or having no foundation with walls resting directly on the ground, or having a dirt floor. The term also applies to shacks, huts, sheds, tents, and similar buildings not suitable for residential use, but used as a place of residence. (See question H30 in Appendix E, "Facsimiles of Questionnaire Pages.")

### PLUMBING CHARACTERISTICS

**Plumbing Facilities**—The category "Complete plumbing for exclusive use" consists of units which have piped water (either hot and cold or only cold), a flush toilet, and a bathtub or shower inside the building for the exclusive use of the occupants of the unit. "Lacking complete plumbing for exclusive use" includes those conditions when (1) all three specified plumbing facilities are present inside the building, but are also used by another household; (2) some but not all the facilities are present; or (3) none of the three specified plumbing facilities is present. (See question H5 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Comparability With 1970 Census Plumbing Facilities Data**—Both in 1970 and 1980, there were separate questions asked in Puerto Rico on the presence of hot and cold piped water, a bathtub or shower, and a flush toilet. For 1980, as in 1970, the tabulations on complete plumbing facilities required that the facilities be inside the same building as the unit being enumerated. In addition for 1980, if the unit did not have a flush toilet, the respondents were asked to identify their toilet facilities as follows: privy, other or none. In 1970, only a sample of the units was asked to provide that identification.

**Bathrooms**—A complete bathroom is a room with a flush toilet, bathtub or shower, and a wash basin with piped hot and cold or only cold water for the exclusive use of the occupants of the housing unit. A half-bathroom has at least a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

## Appendix B.—Definitions and Explanations of Subject Characteristics

The equipment must be inside the same building as the unit being enumerated. The category "None" consists of units with no bathroom facilities, and units with bathroom facilities which are also for the use of the occupants of other housing units. (See question H24 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Source of Water**—Housing units may receive their water supply from a number of sources. A common source supplying water to six or more units is classified as a "Public system." In the great majority of cases in Puerto Rico, the water is supplied by the Puerto Rico Aqueduct and Sewer Authority, but it may also be obtained from a well which supplies water to six or more housing units. If the water is supplied from a well serving five or fewer housing units, the units are classified as having water supplied by an "Individual well." A source of water may be "Cistern, tanks, or drums" in which rain water is collected. The category "Spring or some other source" includes water obtained from springs, creeks, rivers, lakes, irrigation canals, etc. (See question H14 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Sewage Disposal**—Housing units are either connected to a public sewer, to a septic tank or cesspool, or they dispose of sewage by other means. In Puerto Rico, a public sewer is part of the Puerto Rico Aqueduct and Sewer Authority System. A housing unit is considered to be connected to a septic tank or cesspool when the unit is provided with an underground pit or tank for sewage disposal. The category "Other means" includes housing units which dispose of sewage in some other way. (See question H15 in Appendix E, "Facsimiles of Questionnaire Pages.")

### EQUIPMENT AND FUELS

**Electric Lighting**—A housing unit is classified as having electric lighting if it is wired for such lighting, even though the current has been shut off at the time of enumeration because the unit is vacant or the electric bills have not been paid. (See question H18 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Kitchen Facilities**—A unit has complete kitchen facilities when it has all of the following: (1) an installed sink with piped water, (2) a range or cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An ice box is not considered to be a mechanical refrigerator. (See question H22 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Air-Conditioning**—"Air-conditioning" is defined as the cooling of air by a refrigeration unit. It does not include evaporative coolers, fans, or blowers which are not connected to a refrigeration unit; however, it does include heat pumps. A central system is an installation which air-conditions a number of rooms. In an apartment building, such a system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems, each providing central air-conditioning for a group of apartments. A system with individual room controls is a central system. A room unit is an individual air-conditioner which is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room. (See question H26 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Vehicles Available**—Data for this item refer to the number of households with vehicles available at home for the use of the members of the household. Included in this item are passenger cars, pickup trucks, small panel trucks of 1-ton capacity or less, as well as station wagons, company cars, and taxicabs kept at home for use of household members. Cars rented or leased for 1 month or more; police and government cars kept at home; and company vans and trucks of 1-ton capacity or less are also included if kept at home and used for nonbusiness purposes. Dismantled cars, immobile cars used as a source of power for some piece of machinery, and vans and trucks kept at home but used only for business purposes are excluded. The statistics do not reflect the number of vehicles privately owned or the number of house-

holds owning vehicles. (See questions H27 and H28 in Appendix E, "Facsimiles of Questionnaire Pages.")

In this report, selected tables present the number of households with automobiles available separately from the number of households with trucks or vans. The figures do not add to the total number of vehicles available because a household may be counted in both categories. For example, a household may have an automobile as well as a truck or van available for use by household members and, thus, be included in the count of households with automobiles and in the count of households with trucks or vans available.

**Comparability With 1970 Census Automobiles Available Data**—In 1970, only data on the number of households with automobiles which were owned or regularly used by members of the household were obtained. Taxicabs, pickups, or large trucks were not counted. In 1980, the data on automobiles available include taxicabs if kept at home for use of household members but exclude pickups or larger trucks. Separate data were obtained in 1980 on the number of households with vans or trucks of 1-ton capacity or less kept at home for use of members of the household.

**Telephone in Housing Unit**—A unit is classified as having a telephone if there is a telephone in the living quarters. Units where the respondent uses a telephone located inside the building but not in the respondent's living quarters are classified as having no telephone. (See question H25 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Comparability With 1970 Census Telephone Available Data**—In 1970, the question on telephone availability was collected on a 100-percent basis. A housing unit was classified as having a telephone if the household had a telephone on which it could be called, whether it was in another unit, in a common hall, in another building, or shared by another household. For 1980, for a housing unit to be classified as having a telephone, the telephone had to be inside the respondent's living quarters.

**Energy Used by Tank-Type Water Heater**—Data presented for this item refer to the primary type of energy used by a tank-type water heater. The categories for types of energy used are: (1) "Electricity;" (2) "Solar energy;" if the primary type of energy is a system which utilizes the energy available in sunlight to gain and store heat; or (3) "Other fuels" such as gas, fuel oil, etc. The category "No tank-type water heater" includes housing units which do not have a tank-type water heater, units in buildings without hot piped water, units which have hot water supplied by an electric faucet attachment at the kitchen sink or an electric shower attachment, and units with no piped water in the building. (See question H19 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Fuels Used for Cooking**—"Utility gas" is gas piped through underground pipes from a central system that serves the neighborhood. "Bottled, tank, or LP gas" is stored in tanks or bottles which are refilled or exchanged when empty. The category "Other" includes fuel oil, kerosene, gasoline, alcohol, charcoal, wood, as well as coal dust, briquettes, etc. (See question H20 in Appendix E, "Facsimiles of Questionnaire Pages.")

### FINANCIAL CHARACTERISTICS

**Value**—Value is the respondent's estimate of how much the property (house and lot) would sell for, if it were for sale. (See question H11 in Appendix E, "Facsimiles of Questionnaire Pages.")

Value statistics are presented for "Specified owner-occupied" housing units. These "specified" housing units include only one-family houses on less than 3 cuerdas (a cuerda is approximately 0.97 acres) without a commercial establishment or medical office on the property. The data exclude owner-occupied condominium housing units, mobile homes, trailers, boats, tents, or vans occupied as a usual residence, as well as owner-occupied noncondominium units in multi-family buildings. The "Specified owner-occupied" universes are the same for the value tabulation and the mortgage status and selected monthly owner costs tabulation.

**Mortgage Status and Selected Monthly Owner Costs**—The data are presented

for "Specified owner-occupied" housing units. These "specified" housing units include only one-family houses on less than 3 cuerdas (a cuerda is approximately 0.97 acres) without a commercial establishment or medical office on the property. The data exclude owner-occupied condominium housing units, mobile homes, trailers, boats, tents, or vans occupied as a usual residence, as well as owner-occupied noncondominium units in multi-family buildings. Separate distributions are shown for units "With a mortgage" and for units "Not mortgaged." Selected monthly owner costs is the sum of payments for mortgages, deeds of trust, or similar debts on the property; real estate taxes; fire and hazard insurance on the property; utilities (electricity, gas, and water); and fuels (oil, charcoal, kerosene, wood, etc.). (See questions H33, H34, H35 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Rent**—This report presents statistics on rent for "Specified renter-occupied" housing units which include renter occupied units except one-family houses on 3 or more cuerdas (a cuerda is approximately 0.97 acres). Respondents were asked to report rent only for the housing unit enumerated and to exclude any rent paid for additional units or for business premises.

**Contract Rent.** In this report, only median contract rent for specified renter-occupied housing units in rural areas are shown. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. (See question H12 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Gross Rent.** The computed rent termed "Gross rent" is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, and water) and fuels (oil, charcoal, kerosene, wood, etc.) if these are paid for by the renter (or paid for the renter by someone else) in addition to rent. Gross rent is intended to eliminate differentials which result from varying practices with respect to the inclusion of utilities and fuels as part of the rental payment. The estimated cost of fuels is reported on a yearly

basis but is converted to monthly figures in the computation process. Renter units occupied without payment of cash rent are shown separately as "No cash rent" in the tabulations. (See questions H12 and H21 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Land Tenure**—This item is tabulated for owner-occupied housing units, according to the tenure of the land on which the unit is located. "Land owned" is when the owner of the housing unit owns the land outright or is buying the land even if it is not fully paid for. "Land rented" is when any money rent is paid or contracted for the land by the owner of the unit. "Land rent-free" is when the land is not owned or being bought by the owner of the unit and if no money rent is contracted or paid. The owner of the housing unit may have authorized or unauthorized use of the land. (See question H31 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Monthly Land Rent**—This item is tabulated for owner-occupied housing units on rented land. (See question H32 in Appendix E, "Facsimiles of Questionnaire Pages.")

**Income in 1979**—In this report, only median household income is presented. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median and the other having incomes below the median. The median income is based on the distribution of the total number of households including those with no income. All median income figures in this report are calculated using linear interpolation. In other 1980 census reports for Puerto Rico, median income figures of \$20,000 or less are generally calculated using linear interpolation; all other median income amounts are derived through Pareto interpolation.

The data on income in 1979 were derived from answers to questions 32 and 33. Information on money income received in the calendar year 1979 was requested from persons 15 years old and over. "Total income" is the algebraic sum of the amounts reported separately for wage and salary income; nonfarm net self-employment income; farm net self-employment income; interest, dividend,

net rental or royalty income; Social Security or Railroad Retirement income; public assistance or welfare income; and all other income. The figures represent the amount of income received regularly before deductions for personal income taxes, Social Security, bond purchases, union dues, medicare deductions, etc.

Receipts from the following sources were not included as income: money received from the sale of property (unless the recipient was engaged in the business of selling such property); the value of income "in kind" from sources such as food stamps, public housing subsidies, medical care, employers' contributions for pensions, etc.; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts.

Although the income statistics cover the calendar year 1979, the characteristics of persons and the composition of households and families refer to the time of enumeration (April 1, 1980). However, the composition of most families was the same during 1979 as in April 1980.

There may be differences between the data on household income in 1979 in this report and similar data shown in the PHC80-3, *Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas* report. Any such differences are the result of errors corrected after the release of the PHC80-3 report.

**Comparability With 1970 Census Income Data**—In 1970, the statistics on income related to the income of the family or primary individual occupying the housing unit; that is, the sum of the income of the head of the family and all other members of the family 14 years old and over or the income of the primary individual. Income of persons living in the unit but not related to the head of household was not included. In 1980, the statistics on income relate to the income of the household; that is, the sum of the income of all persons 15 years old and over occupying a housing unit, including persons not related to the householder.

A discussion on comparability of income data from other sources including earlier censuses may be found in the 1980 Census of Population Report,

*General Social and Economic Characteristics, PC80-1-C.*

**Poverty Status in 1979**—Households are classified below the poverty level when the total 1979 income of the family or of the nonfamily householder is below the appropriate poverty threshold. The income of persons living in the household who are unrelated to the householder is not considered when determining the poverty status of a household. The poverty thresholds vary by size of family, number of children, and age of the family householder or unrelated individual. The thresholds used in the 1980 census differ slightly from those used in the 1970 census, which took into account the same three factors as well as sex of the family householder or unrelated individual and farm-nonfarm residence. In addition, for the 1980 census the thresholds by size of family were extended from 7 or more persons to 9 or more persons. The income cutoffs are undated each year to reflect the change in the Consumer Price Index. A more detailed explanation of the poverty definition may be found in the 1980 Census of Population Report, *General Social and Economic Characteristics, PC80-1-C.*

PROCEDURES. . . . .	C-2
PROCESSING PROCEDURES. . . .	C-2

### USUAL PLACE OF RESIDENCE

In accordance with census practice dating back to the first U.S. census in 1790, each person enumerated in the 1980 census was counted as an inhabitant of his or her "usual place of residence," which is generally construed to mean the place where the person lives and sleeps most of the time. This place is not necessarily the same as the person's legal residence or voting residence. In the vast majority of cases, however, the use of these different bases of classification would produce substantially the same statistics, although there might be appreciable differences for a few areas.

The implementation of this practice has resulted in the establishment of residence rules for certain categories of persons whose usual place of residence is not immediately apparent. Furthermore, this practice means that persons were not always counted as residents of the place where they happened to be staying on Census Day (April 1). Persons without a usual place of residence, however, were counted where they happened to be staying.

### U.S. Armed Forces

Members of the U.S. Armed Forces living on a military installation were counted, as in every previous census, as residents of the area in which the installation was located; members of the U.S. Armed Forces not living on a military installation were counted as residents of the area in which they were living. Persons in families with U.S. Armed Forces personnel were counted where they were living on Census Day (i.e., the military installation or "off base," as the case might be).

Each Navy ship was attributed to the location that the Department of the Navy designated as its homeport, except for those ships which were deployed to the 6th or 7th Fleet on Census Day. Naval personnel aboard deployed ships were defined in the 1980 census as part of the overseas population, because deployment to the 6th or 7th Fleet implies a long-term overseas assignment.

In homeports with fewer than 1,000 naval personnel assigned to ships, the crews were counted aboard the ship. In homeports with 1,000 or more naval personnel assigned to ships, the naval personnel who indicated that they had a usual residence within 50 miles of the homeport of their ship were attributed to that residence.

When a homeport designated by the Navy was contained in more than one geographic entity, ships homeported and berthed there on Census Day were assigned by the Bureau of the Census to the entity in which the land immediately adjacent to the dock or pier was actually located. Other ships attributed by the Navy to that homeport, but which were not physically present and not deployed to the 6th or 7th Fleet on Census Day, were allocated to the location named on the Navy's homeport list.

### Crews of Merchant Vessels

Shipboard Census Reports were mailed to crews of merchant vessels through the ships' respective owner-operators based on lists of U.S. flag merchant vessels obtained from the Maritime Administration, U.S. Department of Commerce.

If the ship was berthed in a U.S. port, including Puerto Rico, on Census Day, the crew was enumerated as of that port. If the ship was not berthed in a U.S. port but was inside the territorial waters of the United States, the crew was enumerated as of (a) the port of destination if that port was inside the United States, including Puerto Rico, or (b) the homeport of the ship, including Puerto Rico, if its port of destination was outside the United States. Crews of U.S. flag vessels which were outside U.S. territorial waters on Census Day and crews of vessels flying a foreign flag were not enumerated in the 1980 census.

### Persons Away at School

College students were counted as residents of the area in which they were living while attending college, as they have been since 1950. However, children in boarding schools below the college level were counted at their parental home.

### Persons in Institutions

Inmates of institutions, who ordinarily live there for considerable periods of time, were counted as residents of the area where the institution was located. Patients in short-term wards (general, maternity, etc.) of hospitals were counted at their usual place of residence; if they had no usual place of residence, they were counted at the hospital.

### Persons Away From Their Residence on Census Day

Persons in hotels, motels, etc., on the night of March 31, 1980, were requested to fill out a census form for assignment of their census information back to their homes if they indicated that no one was at home to report them in the census. A similar approach was used for persons visiting in private residences, as well as for persons who left Puerto Rico during March 1980 via major intercontinental air or ship carriers for temporary travel abroad. In addition, information on persons away from their usual place of residence was obtained from other members of their families, resident managers, neighbors, etc. If an entire household was expected to be away during the whole period of the enumeration, information on that household was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away from their usual residence and who were also reported at this usual residence by someone else.

A special enumeration was conducted in such facilities as missions, jails, detention centers, etc., on the night of April 8, 1980, and persons enumerated therein were counted as residents of the area in which the establishment was located.

### Residents Abroad

Residents of Puerto Rico who were abroad for an extended period (in the U.S. Armed Forces, working at civilian jobs, studying in universities, etc.) were not included in the population of Puerto Rico. On the other hand, residents of Puerto Rico who were temporarily abroad on vacations, business trips, and the like, were counted at their usual residence in Puerto Rico.

### Citizens of Other Countries

Citizens of other countries having their usual residence (legally or illegally) in Puerto Rico on Census Day, including those working here or attending school (but not living at a chancellery or consulate) were included in the enumeration,

as were members of their families living with them. However, citizens of other countries temporarily visiting or traveling in Puerto Rico or living on the premises of a chancellery or consulate were not enumerated in the 1980 census.

### DATA COLLECTION PROCEDURES

The 1980 Census of Puerto Rico was conducted through a combination of self-enumeration and personal interview. In areas with postal delivery service, an advance census questionnaire which contained explanatory information and the same questions as the short-form questionnaire was delivered by postal carrier to every housing unit on his or her route several days before Census Day, April 1, 1980. The householder was requested to fill out the questionnaire and give it to the enumerator when he or she visited the household. Incomplete, inconsistent, and unfilled forms were completed by interview during the enumerator's visit. In areas without carrier delivery service, questionnaires were made available where people picked up their mail, and all households were enumerated through personal interview. Data for vacant units were obtained by a personal visit and observation.

Data for each housing unit in Puerto Rico were obtained using one of two versions of the census questionnaire: a short-form questionnaire containing a limited number of basic population and housing questions or a long-form questionnaire containing these basic questions as well as a number of additional questions. A sampling procedure was used to determine those units which were to receive the long-form questionnaire, at the time of the enumerator's visit. About one in every six housing units (approximately 17 percent) received the long form or sample questionnaire. Census questionnaires were available in Spanish and in English. Special questionnaires were used for the enumeration of persons in group quarters such as colleges and universities, hospitals, prisons, military installations, and ships. These forms contained the population questions but did not include any housing questions.

### PROCESSING PROCEDURES

The Puerto Rico 1980 census questionnaires were processed in a manner similar to that for the 1970 census. They were designed to be processed electronically by the Film Optical Sensing Device for Input to Computer (FOSDIC). For most items on the questionnaire, the information supplied by the respondent or obtained by the enumerator was indicated by marking the answers in predesignated positions that would be "read" by FOSDIC from a microfilm copy of the questionnaire and transferred onto computer tape with no intervening manual processing. The computer tape did not include information on individual names and addresses.

The data processing was performed in two stages. For 100-percent data, all short forms, and pages 2 and 3 of the long forms (which have the same questions as the short form), were microfilmed, "read" by FOSDIC, and transferred onto computer tape for tabulation. For the sample data, the long form (or sample) questionnaires were processed through manual coding operations since some questions required the respondent to provide write-in entries which could not be read by FOSDIC. Census Bureau coders assigned alphabetical or numerical codes to the write-in answers in FOSDIC readable code boxes on each questionnaire. After all coding was completed, the long forms were microfilmed, and the film was "read" by FOSDIC and transferred onto computer tape.

The tape containing the information from the questionnaires was processed on the Census Bureau's computers through a number of editing and tabulation steps. Among the products of this operation were computer tapes from which the tables in this report (and most others in the 1980 census publications) were prepared on phototypesetting equipment at the Government Printing Office.

A more detailed description of the data collection and processing procedures can be obtained from the 1980 Census of Population and Housing, *Users' Guide*, PHC80-R1.

### INTRODUCTION

The data presented in this publication are based on the 1980 census sample. The data are estimates of the actual figures that would have resulted from a complete count. Estimates can be expected to vary from the complete-count result because they are subject to two basic types of error—sampling and nonsampling. The sampling error in the data arises from the selection of persons and housing units to be included in the sample. The nonsampling error is the result of all other errors that may occur during the collection and processing phases of the census. Nonsampling error, therefore, affects the data in this publication. A more detailed discussion of both sampling and nonsampling error and a description of the estimation procedure are given in this appendix.

### SAMPLE DESIGN

While every person and housing unit in Puerto Rico was enumerated on a

questionnaire that requested certain basic demographic information (e.g., age, number of rooms, units in structure, monthly rent), a sample of persons and housing units was enumerated on a questionnaire that requested additional information. The basic sampling unit for the 1980 census was the housing unit, including all occupants. For persons living in group quarters, the sampling unit was the person. One-sixth of the housing units or persons in group quarters were sampled.

The census of Puerto Rico was conducted through a combination of self-enumeration and personal interview. In areas with postal delivery service, an advance census questionnaire, which contained explanatory information and the same questions as the short-form questionnaire, was delivered by postal carrier to every housing unit on his or her route several days before Census Day. In areas without postal carrier delivery service, questionnaires were available where people picked up their mail. A blank listing book with designated sample lines (every sixth line) was prepared for the enumerator. Beginning about Census Day, the enumerator systematically canvassed the area and listed all housing units in the listing book in the order they were encountered. Completed questionnaires, including sample information for any housing unit which was listed on a designated sample line, were collected.

An enumerator was responsible for a small geographic area known as an enumeration district, or ED. An ED usually represented the average workload area for one enumerator.

### ERRORS IN THE DATA

Since the data in this publication are based on a sample, they may differ somewhat from complete-count figures that would have been obtained if all housing units, persons within those

housing units, and persons living in group quarters had been enumerated using the same questionnaires, instructions, enumerators, etc. The deviation of a sample estimate from the average of all possible samples is called the sampling error. The standard error of a survey estimate is a measure of the variation among the estimates from the possible samples and thus is a measure of the precision with which an estimate from a particular sample approximates the average result of all possible samples. The sample estimate and its estimated standard error permit the construction of interval estimates with prescribed confidence that the interval includes the average result of all possible samples. The method of calculating standard errors and confidence intervals for the data in this report is given below.

In addition to the variability which arises from the sampling procedures, both sample data and complete-count data are subject to nonsampling error. Nonsampling error may be introduced during each of the many extensive and complex operations used to collect and process census data. For example, operations such as editing, reviewing, or handling questionnaires may introduce error into the data. A more detailed discussion of the sources of nonsampling error is given in the section "Control of Nonsampling Error" in this appendix.

Nonsampling error may affect the data in two ways. Errors that are introduced randomly will increase the variability of the data and should therefore be reflected in the standard error. Errors that tend to be consistent in one direction will make both sample and complete-count data biased in that direction. For example, if respondents consistently tend to over-report their monthly owner costs, then the resulting estimates of households by monthly owner costs categories will be skewed toward the upper monthly owner costs categories. Such biases are not reflected in the standard error.

## Calculation of Standard Errors

**Totals and Percentages**—Tables A through C in this appendix contain the information necessary to calculate the standard errors of sample estimates in this report. In order to perform this calculation, it is necessary to know the unadjusted standard error for the characteristic, given in table A or B, that would result under a simple random sample design (of persons, families, or housing units) and estimation technique; and the adjustment factor for the particular characteristic estimated, given in table C. The adjustment factors reflect the effects of the actual sample design and complex ratio estimation procedure used for the 1980 census.

To calculate the approximate standard error of an estimate for an area, follow the steps given below:

- a. Obtain the unadjusted standard error from table A or B (or from the formula given below the table) for the estimated total or percentage, respectively.
- b. Use table C to obtain the factor for the characteristic (e.g., air conditioning, year structure built) which you are working. If the estimate is a cross-tabulation of more than one characteristic, use the largest factor. Multiply the unadjusted standard error by this factor.

As is evident from the formulas below tables A and B, the unadjusted standard errors of zero estimates or of very small estimated totals or percentages approach zero. This is also the case for very large percentages or estimated totals that are close to the size of the tabulation areas to which they correspond. These estimated totals and percentages are, nevertheless, still subject to sampling and nonsampling variability, and an estimated standard error of zero (or a very small standard error) is not appropriate.

For estimated percentages that are less than 2 or greater than 98, use the *unadjusted* standard errors in table B that appear in the "2 or 98" row. For an estimated total that is less than 50 or within 50 of the total size of the tabulation area, use an *unadjusted* standard error of 16.

An illustration of the use of the tables

will be given in a later section of this appendix.

**Differences**—The standard errors estimated from these tables are not directly applicable to differences between two sample estimates. In order to estimate the standard error of a difference, the tables are to be used somewhat differently in the following three situations:

- a. For the difference between a sample estimate and a complete-count value, use the standard error of the sample estimate.
- b. For the difference between (or sum of) two sample estimates, the appropriate standard error is approximately the square root of the sum of the two individual standard errors squared; that is, for standard errors  $Se_x$  and  $Se_y$  of estimates  $x$  and  $y$ :

$$Se_{(x+y)} = Se_{(x-y)} = \sqrt{(Se_x)^2 + (Se_y)^2}$$

This method, however, will underestimate (overestimate) the standard error if the two items in a sum are highly positively (negatively) correlated or if the two items in a difference are highly negatively (positively) correlated. This method may also be used for the difference between (or sum of) sample estimates from two censuses or between a census sample and another survey. The standard error for estimates not based on the 1980 census sample must be obtained from an appropriate source outside of this publication.

- c. For the difference between two estimates, one of which is a subclass of the other, use the tables directly where the calculated difference is the estimate of interest.

**Medians**—For the standard error of a median of a characteristic, it is necessary to examine the distribution from which the median is derived, as the size of the base and the distribution itself affect the standard error. An approximate method is given here. As the first step, compute one-half of the number on which the median is based (refer to this result as

$N/2$ ). Treat  $N/2$  as if it were an ordinary estimate and obtain its standard error as instructed above using tables A and C. Compute the desired confidence interval about  $N/2$ . Starting with the lowest value of the characteristic, cumulate the frequencies in each category of the characteristic until the sum equals or first exceeds the lower limit of the confidence interval about  $N/2$ . By linear interpolation, obtain a value of the characteristic corresponding to this sum. This is the lower limit of the confidence interval of the median. In a similar manner, cumulate frequencies starting from the highest value of the characteristic until the sum equals or exceeds the count in excess of the upper limit of the interval about  $N/2$ . Interpolate as before to obtain the upper limit of the confidence interval for the estimated median.

## Confidence Intervals

A sample estimate and its estimated standard error may be used to construct confidence intervals about the estimate. These intervals are ranges that will contain the average value of the estimated characteristic that results over all possible samples, with a known probability. For example, if all possible samples that could result under the 1980 census sample design were independently selected and surveyed under the same conditions, and if the estimate and its estimated standard error were calculated for each of these samples, then:

- (1) Approximately 68 percent of the intervals from one estimated standard error below the estimate to one estimated standard error above the estimate would contain the average result from all possible samples; and
- (2) Approximately 95 percent of the intervals from two estimated standard errors below the estimate to two estimated standard errors above the estimate would contain the average result from all possible samples.

The intervals are referred to as 68-percent and 95-percent confidence intervals, respectively.

The average value of the estimated

characteristic that could be derived from all possible samples is or is not contained in any particular computed interval. Thus, we cannot make the statement that the average value has a certain probability of falling between the limits of the calculated confidence interval. Rather, one can say with a specified probability or confidence that the calculated confidence interval includes the average estimate from all possible samples (approximately the complete count value).

Confidence intervals may also be constructed for the difference between two sample figures. This is done by computing the difference between these figures, obtaining the standard error of the difference (using the formula given earlier), and then forming a confidence interval for this estimated difference as above. One can then say with specified confidence that this interval include the difference that would have been obtained by averaging the results from all possible samples.

The estimated standard errors given in this report do not include all portions of the variability due to nonsampling error that may be present in the data. The standard errors reflect the effect of simple response variance, but not the effect of correlated errors introduced by enumerators, coders, or other field or processing personnel. Thus, the standard errors calculated represent a lower bound of the total error. As a result, confidence intervals formed using these estimated standard errors may not meet the stated levels of confidence (i.e., 68 or 95 percent). Thus, some care must be exercised in the interpretation of the data in this publication based on the estimated standard errors.

For more information on confidence intervals and nonsampling error, see any standard sampling theory text.

### Use of Tables to Compute Standard Errors

Table 23 shows that for Carolina zona urbana, 27,746 housing units out of all 46,989 year-round housing units had no air-conditioning. Table C shows the adjustment factor for the characteristic "Air-conditioning" to be 1.0.

The unadjusted standard error for the estimated total 27,746 is obtained from table A or from the formula given below table A. In order to avoid interpolation,

the use of the formula will be demonstrated here. The formula for the unadjusted standard error,  $Se$ , is:

$$Se = \sqrt{5 (27,746) \left(1 - \frac{27,746}{47,758}\right)}$$

= 241 housing units

Note: The total count of housing units for Carolina zona urbana is 47,758.

The standard error of the estimated 27,746 year-round housing units with no air-conditioning is found by multiplying the unadjusted standard error 241 by the adjustment factor which was determined to be 1.0. This yields the estimated standard error of 241 for the total number of year-round housing units in Carolina zona urbana with no air-conditioning.

The estimated percent of year-round housing units with no air-conditioning is 59.0. From table B, the unadjusted standard error is found to be 0.52. Thus, the standard error for the estimated 59.0 percent of year-round housing units with no air-conditioning is  $0.52 \times 1.0 = 0.52$ .

A note of caution concerning numerical values is necessary. Standard errors of percentages derived in this manner are approximate. Calculations can be expressed to several decimal places, but to do so would indicate more precision in the data than is justifiable. Final results should contain no more than one decimal place when the estimated standard error is one percentage point (i.e., 1.0) or more.

In the previous example, the standard error of the 27,746 year-round housing units with no air-conditioning in Carolina zona urbana was found to be 241. Thus, a 95-percent confidence interval for this estimated total is found to be:

$$[27,746 - 2(241)] \text{ to } [27,746 + 2(241)]$$

or

$$27,264 \text{ to } 28,228$$

The calculation of standard errors and confidence intervals will be illustrated when a difference of two sample estimates is obtained. For example, in table 23 the number of year-round housing units in Ponce zona urbana with no air-conditioning was 37,828 and the total number of year-round housing units

was 47,035. Thus, the percentage of year-round housing units with no air-conditioning was 80.4 percent. The unadjusted standard error from table B is 0.42. Table C shows the adjustment factor to be 1.0 for "Air-conditioning." Thus, the approximate standard error of the percentage (80.4 percent) is  $0.42 \times 1.0 = 0.42$ .

Suppose that one wishes to obtain the standard error of the difference between Ponce and Carolina zona urbanas of the percentages of year-round housing units with no air-conditioning. The difference in the percentages of interest for the two zona urbanas is:

$$80.4 - 59.0 = 21.4 \text{ percent}$$

Using the results of the previous example:

$$\begin{aligned} Se (21.4) &= \sqrt{(Se (80.4))^2 + (Se (59.0))^2} \\ &= \sqrt{(0.42)^2 + (0.52)^2} \\ &= 0.67 \text{ percent.} \end{aligned}$$

The 95-percent confidence interval for the difference is formed as before:

$$[21.4 - 2(0.67)] \text{ to } [21.4 + 2(0.67)]$$

or

$$20.1 \text{ to } 22.7$$

### ESTIMATION PROCEDURE

The estimates which appear in this publication were obtained from an iterative ratio estimation procedure which resulted in the assignment of a weight to each sample person or housing unit record. For any given tabulation area, a characteristic total was estimated by summing the weights assigned to the persons or housing units in the tabulation area which possessed the characteristic. Estimates of family characteristics were based on the weights assigned to the family members designated as householders. Each sample person or housing unit record was assigned exactly one weight to be used to produce estimates of all characteristics. For example, if the weight given to a sample person or housing unit had the value five, all characteristics of that person or housing unit would be tabulated with a weight of

five. The estimation procedure, however, did assign weights which vary from person to person or housing unit to housing unit.

The estimation procedure used to assign the weights was performed in geographically defined "weighting areas." Weighting areas were generally formed of adjoining portions of geography, which closely agreed with census tabulation areas within municipios. Weighting areas were required to have a minimum sample of 400 persons. Weighting areas were never allowed to cross municipio boundaries. In small municipios with a sample count of less than 400 persons, the minimum required sample condition was relaxed to permit the entire municipio to become a weighting area.

Within a weighting area, the ratio estimation procedure for persons was performed in three stages. For persons, the first stage employed 17 household-type groups. The second stage used two groups: householders and nonhouseholders. The third stage could potentially use 16 age-sex groups. The stages were as follows:

PERSONS

Stage I—Type of Household

Group	Persons in Housing Units With a Family With Own Children Under 18
1	2 persons in housing unit
2	3 persons in housing unit
3	4 persons in housing unit
4	5 to 7 persons in housing unit
5	8 or more persons in housing unit
Persons in Housing Units With a Family Without Own Children Under 18	
6-10	2 persons in housing unit through 8 or more persons in housing unit
Persons in All Other Housing Units	
11	1 person in housing unit
12-16	2 persons in housing unit through 8 or more persons in housing unit
17	Persons in group quarters

Stage II—Householder/Nonhouseholder

Group	
1	Householder
2	Nonhouseholder (including persons in group quarters)

Stage III—Age/Sex

Group	Male
1	0 to 4 years of age
2	5 to 14 years of age
3	15 to 19 years of age
4	20 to 24 years of age
5	25 to 34 years of age
6	35 to 44 years of age
7	45 to 64 years of age
8	65 years of age or older
Female	
9-16	Same age categories as groups 1 to 8

Within a weighting area, the first step in the estimation procedure was to assign each sample person record an initial weight. This weight was approximately equal to the inverse of the probability of selecting a person for the census sample.

The next step in the estimation procedure was to combine, if necessary, the groups in each of the three stages prior to the repeated ratio estimation in order to increase the reliability of the ratio estimation procedure. For each stage, any group that did not meet certain criteria concerning the unweighted sample count or the ratio of the complete count to the initially weighted sample count was combined or collapsed with another group in the same stage according to a specified collapsing pattern.

As the final step, the initial weights underwent three stages of ratio adjustment which used the groups listed above. At the first stage, the ratio of the complete census count to the sum of the initial weights for each sample person was computed for each stage I group. The initial weight assigned to each person in a group was then multiplied by the stage I group ratio to produce an adjusted weight. In stage II, the stage I adjusted weights were again adjusted by the ratio of the complete census count to the sum of the stage I weights for sample persons in each stage II group. Finally,

the stage II weights were adjusted at stage III by the ratio of the complete census count to the sum of stage II weights for sample persons in each stage III group. The three stages of adjustment were performed twice (two iterations) in the order given above. The weights obtained from the second iteration for stage III were assigned to the sample person records. However, to avoid complications in rounding for tabulated data, only whole number weights were assigned. For example, if the final weight for the persons in a particular group was 7.2, then one-fifth of the sample persons in this group were randomly assigned a weight of 8 and the remaining four-fifths received a weight of 7.

The ratio estimation procedure for housing units was essentially the same as that for persons. The major difference was that the occupied housing unit ratio estimation procedure was done in two stages and the vacant housing unit ratio estimation procedure was done in one stage. The first stage for occupied housing units employed 16 household-type categories and the second stage could potentially use 19 tenure/value or rent groups. For vacant housing units, three groups were utilized. The stages for the ratio estimation for housing units were as follows:

OCCUPIED HOUSING UNITS

Stage I—Type of Household

Group	Housing Units With a Family With Own Children Under 18
1	2 persons in housing unit
2	3 persons in housing unit
3	4 persons in housing unit
4	5 to 7 persons in housing unit
5	8 or more persons in housing unit
Housing Units With a Family Without Own Children Under 18	
6-10	2 persons in housing unit through 8 or more persons in housing unit
All Other Housing Units	
11	1 person in housing unit
12-16	2 persons in housing unit through 8 or more persons in housing unit

## Stage II—Tenure/Value or Rent

## Group Owner

## Value of House

1	\$0 to \$1,999
2	\$2,000 to \$4,999
3	\$5,000 to \$9,999
4	\$10,000 to \$19,999
5	\$20,000 to \$49,999
6	\$50,000 to \$74,999
7	\$75,000+
8	Other Owners

## Renter

## Rent Categories

9	\$1 to \$29
10	\$30 to \$59
11	\$60 to \$99
12	\$100 to \$149
13	\$150 to \$199
14	\$200 to \$249
15	\$250 to \$299
16	\$300 to \$399
17	\$400+
18	Other Renter
19	No Cash Rent

## VACANT HOUSING UNITS

## Group

1	Vacant for Rent
2	Vacant for Sale
3	Other Vacant

The estimates produced by this procedure realize some of the gains in sampling efficiency that would have resulted if the population had been stratified into the ratio estimation groups before sampling, and the sampling rate had been applied independently to each group. The net effect is a reduction in both the standard error and the possible bias of most estimated characteristics to levels below what would have resulted from simply using the initial (unadjusted) weight. A by-product of this estimation procedure is that the estimates from the sample will, for the most part, be consistent with the complete-count figures for the population and housing unit groups used in the estimation procedure.

## CONTROL OF NONSAMPLING ERROR

As mentioned above, nonsampling error is present in both sample and complete-

count data. If left unchecked, this error could introduce serious bias into the data, the variability of which could increase dramatically over that which would result purely from sampling. While it is impossible to completely eliminate nonsampling error from an operation as large and complex as the 1980 Census of Puerto Rico, the Bureau of the Census attempted to control the sources of such error during the collection and processing operations. The primary sources of nonsampling error and the programs instituted for control of this error are described below. The success of these programs, however, was contingent upon how well the instructions were actually carried out during the census. To the extent possible, both the effects of these programs and the amount of error remaining after their application will be evaluated.

**Undercoverage**—It is possible for some housing units or persons to be entirely missed by the census. This undercoverage of persons and housing units can introduce biases into the data. Two extensive programs that were developed to focus on this important problem are explained below:

- Enumerators filled an address card for each housing unit they listed. The cards were delivered to the post offices where carriers reviewed the cards and noted instances where there were addresses to which mail was delivered but for which there was no card. Missing addresses were added to the census list of housing units and were later enumerated.
- A recheck of housing units initially classified as vacant or non-existent was utilized to further reduce the undercoverage of persons.

More extensive discussions of programs developed to reduce undercoverage will be published as the analyses of those programs are completed.

**Respondent and Enumerator Error**—The person answering the questionnaire or responding to the questions posed by an enumerator could serve as a source of error by offering incorrect or incomplete information. To reduce this source of error, questions were phrased as clearly as possible based on precensus tests and

detailed instructions for completing the short-form questionnaire were provided to each housing unit. In addition, respondents' answers were edited for completeness and consistency and followed up as necessary. For example, if the source of water item was incomplete for a housing unit, long-form field edit procedures would recognize the situation and a followup attempt to obtain the information would be made.

The enumerator may misinterpret or otherwise incorrectly record information given by a respondent; may fail to collect some of the information for a person or housing unit; or may collect data for housing units that were not designated as part of the sample. To control these problems, the work of enumerators was carefully monitored. Field staff were prepared for their tasks by using standardized training packages which included experience in using census materials. Also, the estimation procedure was designed to control for biases that would result from the collection of data from housing units not designated for the sample.

**Processing Error**—The many phases of processing the census represent potential sources for the introduction of nonsampling error. The processing of the census questionnaires includes the field editing, followup, and transmittal of completed questionnaires; the manual coding of write-in responses; and the electronic data processing. The various field, coding, and computer operations undergo a number of quality control checks to insure their accurate application.

**Nonresponse**—Nonresponse to particular questions on the census questionnaire allows for the introduction of bias into the data, since the characteristics of the nonrespondents have not been observed and may differ from those reported by respondents. As a result, any allocation procedure using respondent data may not completely reflect this difference either at the element level (individual person or housing unit) or on the average. Some protection against the introduction of large biases is afforded by minimizing nonresponse. In the census, nonresponse was substantially reduced during the field operations by the various edit and follow-up operations aimed at obtaining a

response for every question. Characteristics for the nonresponses remaining after this operation were allocated by the computer using reported data for a person or housing unit with similar characteristics. The allocation procedure is described below.

**EDITING OF UNACCEPTABLE DATA**

The objective of the processing operation is to produce a set of statistics that describes Puerto Rico's housing inventory as accurately and clearly as possible. To meet this objective, certain unacceptable entries were edited.

In the field, questionnaires were reviewed for omissions and certain inconsistencies by a census clerk or an enumerator and, if necessary, a followup was made to obtain missing information. In addition, a similar review of questionnaires was done in the central processing office. As a rule, however, editing was performed by hand only when it could not be done effectively by machine.

As one of the first steps in com-

puterized editing, the configuration of marks on the questionnaire was scanned electronically to determine whether it contained information for a person or a housing unit or merely spurious marks. If any characteristic was still missing when the questionnaires reached the central processing office, it was supplied by allocation. Allocation, or assignments of acceptable codes in place of unacceptable entries, was needed most often when an entry for a given item was lacking or when the information reported for a particular item was inconsistent with another item for the same housing unit. As in previous censuses, the general procedure for changing unacceptable entries was to assign an entry for a housing unit that was consistent with entries for other housing units with similar characteristics. For example, if a unit was reported as rented but the amount of rent was missing, the computer automatically assigned the rent that was reported for the preceding renter-occupied unit. The assignment of acceptable codes in place of blanks or unacceptable entries is designed to enhance the usefulness of the data.

Specific tolerances were established for the number of computer allocations that would be permitted. If the number of corrections was beyond tolerance, the questionnaires in which the errors occurred were clerically reviewed. If it was found that the errors resulted from damaged questionnaires, from improper microfilming, from faulty reading by FOSDIC of undamaged questionnaires, or from other types of machine failure, the questionnaires were reprocessed.

**ALLOCATION TABLES**

The extent of allocation in the editing process and their effect on each of the subjects are shown in tables B-1, B-2 and B-2a which follow table 35. In these tables, "housing units with one or more allocations" are stated as percentages of year-round housing units or occupied housing units. In some instances, these tables show percentages of a specific group of units. Percentages are not shown if the item is not published for the specified areas.

## Appendix D.—Accuracy of the Data

**Table A. Unadjusted Standard Errors for Estimated Totals**

[Based on a 1-in-6 simple random sample]

Estimated Total <sup>1</sup>	Size of publication area <sup>2</sup>											
	500	1 000	2 500	5 000	10 000	25 000	50 000	100 000	250 000	500 000	1 000 000	4 000 000
50.....	16	16	16	16	16	16	16	16	16	16	16	16
100.....	20	21	22	22	22	22	22	22	22	22	22	22
250.....	25	30	35	35	35	35	35	35	35	35	35	35
500.....	-	35	45	45	50	50	50	50	50	50	50	50
1 000.....	-	-	55	65	65	70	70	70	70	70	70	70
2 500.....	-	-	-	80	95	110	110	110	110	110	110	110
5 000.....	-	-	-	-	110	140	150	150	160	160	160	160
10 000.....	-	-	-	-	-	170	200	210	220	220	220	220
15 000.....	-	-	-	-	-	170	230	250	270	270	270	270
25 000.....	-	-	-	-	-	-	250	310	340	350	350	350
75 000.....	-	-	-	-	-	-	-	310	510	570	590	610
100 000.....	-	-	-	-	-	-	-	-	550	630	670	700
250 000.....	-	-	-	-	-	-	-	-	-	790	970	1 080
500 000.....	-	-	-	-	-	-	-	-	-	-	1 120	1 480
1 000 000.....	-	-	-	-	-	-	-	-	-	-	-	1 940

<sup>1</sup>/ For estimated totals larger than 1 000 000, the standard error is somewhat larger than the table values. The formula given below should be used to calculate the standard error.

$$se(\hat{Y}) = \sqrt{5\hat{Y}(1 - \frac{\hat{Y}}{N})}$$

N = Size of area

$\hat{Y}$  = Estimate of characteristic total

<sup>2</sup>/ The total count of persons in the area if the estimated total is a person characteristic, or the total count of housing units in the area if the estimated total is a housing unit characteristic.

**Table B. Unadjusted Standard Error in Percentage Points for Estimated Percentages**

[Based on a 1-in-6 simple random sample]

Estimated Percentage	Base of percentage <sup>1</sup>									
	500	750	1 000	1 500	2 500	5 000	7 500	10 000	25 000	50 000
2 or 98.....	1.4	1.1	1.0	0.8	0.6	0.4	0.4	0.3	0.2	0.1
5 or 95.....	2.2	1.8	1.5	1.3	1.0	0.7	0.6	0.5	0.3	0.2
10 or 90.....	3.0	2.4	2.1	1.7	1.3	0.9	0.8	0.7	0.4	0.3
15 or 85.....	3.6	2.9	2.5	2.1	1.6	1.1	0.9	0.8	0.5	0.4
20 or 80.....	4.0	3.3	2.8	2.3	1.8	1.3	1.0	0.9	0.6	0.4
25 or 75.....	4.3	3.5	3.1	2.5	1.9	1.4	1.1	1.0	0.6	0.4
30 or 70.....	4.6	3.7	3.2	2.6	2.0	1.4	1.2	1.0	0.6	0.5
35 or 65.....	4.8	3.9	3.4	2.8	2.1	1.5	1.2	1.1	0.7	0.5
50.....	5.0	4.1	3.5	2.9	2.2	1.6	1.3	1.1	0.7	0.5

<sup>1</sup>/ For a percentage and/or base of percentage not shown in the table, the formula given below may be used to calculate the standard error.

$$se(\hat{p}) = \sqrt{\frac{5}{B} \hat{p}(100 - \hat{p})}$$

B = Base of estimated percentage

$\hat{p}$  = Estimated percentage

Table C. **Standard Error Adjustment Factors**

Characteristic	Adjustment Factor
Occupancy and vacancy status.....	1.0
Tenure.....	1.1
Units in structure.....	1.2
Source of water.....	1.0
Sewage disposal.....	1.0
Year structure built.....	1.0
Year householder moved into housing unit.....	1.1
Kitchen facilities.....	1.0
Number of bedrooms or bathrooms.....	1.1
Telephone in housing unit.....	1.2

# 1980 Census of Puerto Rico

DO	A1	A2	A4	A5	A6
L					

**A message from the Director,  
U.S. Bureau of the Census . . .**

We must, from time to time, take stock of ourselves as a people if our Nation is to meet successfully the many national and local challenges we face. This is the purpose of the 1980 census.

The essential need for a population census was recognized almost 200 years ago when the Constitution of the United States was written. As provided by article 1, population censuses of the United States have been taken every 10 years. As part of the 1980 Census of Population and Housing, as required by title 13, United States Code, the U.S. Bureau of the Census is conducting the census of Puerto Rico as of April 1, 1980.

The law under which the census is taken protects the confidentiality of your answers. For the next 72 years — or until April 1, 2052 — only sworn census workers have access to the individual records, and no one else may see them.

Your answers, when combined with the answers from other people, will provide the statistical figures needed by public and private groups, schools, business and industry, and Federal, Commonwealth, and municipal governments. These figures will increase the understanding of how the Puerto Rican population and housing are changing. In this way, today's problems can be dealt with more effectively.

The census is a vitally important activity for Puerto Rico. Please do your part by filling out this census form accurately and completely. A census taker will visit your household to pick up the form; please keep it in a safe, convenient place until then.

Thank you for your cooperation.

## Your answers are confidential

By law (title 13, U.S. Code), census employees are subject to fine and/or imprisonment for any disclosure of your answers. Only after 72 years does your information become available to other government agencies or the public. The same law requires that you answer the questions to the best of your knowledge.

**NOTE:** Responses to long-form questionnaires were obtained by personal interview, therefore no English or Spanish respondent instructions were printed.

**Please continue**

CENSUS USE ONLY	A I N O

**H1. Did you leave anyone out of Question 1 because you were not sure if the person should be listed — for example, a new baby still in the hospital, a lodger who also has another home, or a person who stays here once in a while and has no other home?**

- ☐ Yes — Determine whether to add person.  
☐ No

**H2. Did you list anyone in Question 1 who is away from home now — for example, on a vacation or in a hospital?**

- ☐ Yes — Determine whether person should remain listed.  
☐ No

**H3. Is anyone visiting here who is not already listed?**

- ☐ Yes — Determine whether to add person.  
☐ No

**H4. Do you enter your living quarters —**

- ☐ Directly from the outside or through a common or public hall?  
☐ Through someone else's living quarters?

**H5a. Is there hot and cold piped water in this building?**

- ☐ Yes, hot and cold piped water in this building  
☐ No, only cold piped water in this building  
☐ No piped water in this building

**b. Is there a bathtub or shower in this building?**

- ☐ Yes, for this household only  
☐ Yes, but also used by another household  
☐ No bathtub or shower

**c. Is there a flush toilet in this building?**

- ☐ Yes, for this household only  
☐ Yes, but also used by another household  
☐ No — If "No," what type of toilet? ☐ Privy ☐ Other or none

**H6. How many rooms do you have in your living quarters?**

*Count living rooms, dining rooms, kitchens, and bedrooms, but do not count bathrooms, balconies, foyers, or halls.*

- ☐ 1 room ☐ 4 rooms ☐ 7 rooms  
☐ 2 rooms ☐ 5 rooms ☐ 8 rooms  
☐ 3 rooms ☐ 6 rooms ☐ 9 or more rooms

**H7. Are your living quarters —**

- ☐ Owned or being bought by someone in this household?  
☐ Rented for cash rent?  
☐ Occupied without payment of cash rent?

**H8. Is this apartment (house) part of a condominium?**

- ☐ No ☐ Yes, a condominium

**FOR CENSUS USE ONLY**

A4. Block number	A6. Serial number	B. Type of unit or quarters	For Vacant Units
		Occupied	<b>C1. Is this unit for —</b>
		<input type="radio"/> First form	<input type="radio"/> Year round use?
		<input type="radio"/> Continuation	<input type="radio"/> Seasonal use? — Skip C2, C3, and D.
		Vacant	<b>C2. Vacancy status</b>
		<input type="radio"/> Regular	<input type="radio"/> For rent
		<input type="radio"/> Usual home elsewhere	<input type="radio"/> For sale only
		Group quarters	<input type="radio"/> Rented or sold, not occupied
		<input type="radio"/> First form	<input type="radio"/> Held for occasional use
		<input type="radio"/> Continuation	<input type="radio"/> Other vacant
			<b>C3. Is this unit boarded up?</b>
			<input type="radio"/> Yes <input type="radio"/> No

**H9. Which best describes this building?**

*Include all apartments, flats, etc., even if vacant.*

- ☐ A mobile home or trailer  
☐ A one-family house detached from any other house  
☐ A one-family house attached to one or more houses  
☐ A building for 2 families  
☐ A building for 3 or 4 families  
☐ A building for 5 to 9 families  
☐ A building for 10 to 19 families  
☐ A building for 20 to 49 families  
☐ A building for 50 or more families  
☐ A boat, tent, van, etc.

**H10. If this is a one-family house —**

**a. Is the house on a property of 3 or more cuerdas?**

- ☐ Yes ☐ No

**b. Is any part of the property used as:**

- ☐ Yes ☐ No  
 (1) A commercial establishment?  
 (2) A medical office?  
 (3) Other type of office?

**H11. If this is a one-family house or a condominium unit which you own or are buying —**

**What is the value of this property, that is, how much do you think this property (house and lot or condominium unit) would sell for?**

- |                      |                      |
|----------------------|----------------------|
| Less than \$2,000    | \$25,000 to \$27,499 |
| \$2,000 to \$2,999   | \$27,500 to \$29,999 |
| \$3,000 to \$3,999   | \$30,000 to \$32,499 |
| \$4,000 to \$4,999   | \$32,500 to \$34,999 |
| \$5,000 to \$7,499   | \$35,000 to \$37,499 |
| \$7,500 to \$9,999   | \$37,500 to \$39,999 |
| \$10,000 to \$12,499 | \$40,000 to \$44,999 |
| \$12,500 to \$14,999 | \$45,000 to \$49,999 |
| \$15,000 to \$17,499 | \$50,000 to \$59,999 |
| \$17,500 to \$19,999 | \$60,000 to \$74,999 |
| \$20,000 to \$22,499 | \$75,000 to \$99,999 |
| \$22,500 to \$24,999 | \$100,000 or more    |

**H12. If you pay rent for your living quarters —**

**What is the monthly rent?**

*If rent is not paid by the month, see the Questionnaire Reference Book on how to figure a monthly rent.*

- |                |                |
|----------------|----------------|
| Less than \$30 | \$140 to \$149 |
| \$30 to \$39   | \$150 to \$159 |
| \$40 to \$49   | \$160 to \$169 |
| \$50 to \$59   | \$170 to \$179 |
| \$60 to \$69   | \$180 to \$189 |

Ask questions H31 and H32 if this unit is owned or being bought by a member of this household.</b> <b>H31. Is the owner of this housing unit also owner of the land or is the land being rented?</b> <input type="radio"/> Owns or is buying the land <input type="radio"/> Pays rent for the land <input checked="" type="radio"/> Does not pay cash rent for the use of the land <b>H32. If the land is being rented — What is the monthly rent for the land?</b> \$ _____ .00 (Nearest dollar)	

FOR YOUR HOUSEHOLD

Please ask H33–H35 if this is a one family house which is owned or is being bought, unless this is –

- A mobile home or trailer .....
- A house on 3 or more cuerdas .....
- A condominium unit .....
- A house with a commercial establishment or medical office on the property .....

If any of these or If the unit is being rented or this is a multi-family structure, skip H33 to H35 and turn to page 6.

H33. What were the real estate taxes on this property last year?

\$ .....00      ☐ None

H34. What is the annual premium for fire and hazard insurance on this property?

\$ .....00      ☐ None

H35a. Do you have a mortgage or similar debt on this property?

- ☐ Yes, mortgage or similar debt
- ☐ No — Skip to page 6

b. Do you have a second or junior mortgage on this property?

- ☐ Yes
- ☐ No

c. How much is your total regular monthly payment to the lender?

Also include payments to lenders holding second or junior mortgages on this property.

\$ .....00      ☐ No regular payment required — Skip to page 6

d. Does your regular monthly payment (amount entered in H35c) include payments for real estate taxes on this property?

- ☐ Yes, taxes included in payment
- ☐ No, taxes paid separately or taxes not required

e. Does your regular monthly payment (amount entered in H35c) include payments for fire and hazard insurance on this property?

- ☐ Yes, insurance included in payment
- ☐ No, insurance paid separately or no insurance

# 1980 Census of Population and Housing

## Users' Guide

---

The **Users' Guide**, a reference work on the 1980 census, is now available. It consists of:

- **Part A. Text**—Covers census data subjects; geographic considerations; reports, tapes, maps, and other products; services available to users; and many other topics.
- **Part B. Glossary**—Provides detailed definitions of population, housing, geographic, and technical terms.
- **Part C. Index to Summary Tape Files 1 to 4**—Provides an index, subject-by-subject, to the hundreds of tables in the four major summary tape series. Tells which tables have the desired data and also provides complete descriptions for all tables in these STFs.
- **Sources of Assistance**—Furnishes addresses and phone numbers of public and private sector organizations offering a variety of products and services, such as tape processing, area profiles, training, and reference assistance.
- **Updates**—Provide "Part A. Text" revisions on new developments relating to the 1980 census.

Other parts, including an index to reports, are planned for publication later.

---

Order from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Specify the stock numbers (S/N) given below and make check payable to Superintendent of Documents.

Part A. Text (S/N 003-024-03625-8)—\$5.50

Part B. Glossary; Sources of Assistance; and Updates  
(Supplement 1) (S/N 003-024-05004-8)—\$6.00

Part C. Index to Summary Tape Files 1 to 4  
(Supplement 2) (S/N 003-024-05771-9)—\$4.25

## NEGOCIADO DEL CENSO

John G. Keane, Director

C. L. Kincannon, Director Diputado

## DIVISIÓN DE VIVIENDA

Arthur F. Young, Jefe

# Reconocimiento

Muchas personas participaron en las distintas actividades del censo de 1980. Estos reconocimientos reflejan, en términos generales, los funcionarios durante los procedimientos para la publicación de los datos después del censo. El Negociado del Censo estuvo dirigido por **Bruce Chapman**, Director, y **C.L. Kincannon**, Director Diputado. La dirección principal del programa de publicación de los datos fue llevada a cabo por **William P. Butz**, Director Asociado para Áreas Demográficas, asistido por **Peter A. Bounpane**, Director Auxiliar para Censos Demográficos, en conjunto con **Barbara A. Bailar**, Directora Asociada para Normas y Metodología Estadística, **Howard N. Hamilton**, Director Asociado Interino para Tecnología Informativa, **James D. Lincoln**, entonces Director Asociado para Administración, y **Stanley D. Moore**, Director Asociado para Operaciones de Campo. El personal bajo el Director fue asistido por **Sherry L. Courtland**. La dirección de la enumeración censal y de las actividades iniciales de elaboración fue provista por **Vincent P. Barabba**, ex Director, **Daniel B. Levine**, ex Director Diputado, y **George E. Hall**, ex Director Asociado.

La responsabilidad de la planificación, coordinación, elaboración y publicación del censo de 1980 descansó en la División de Censos Decenales bajo la dirección de **Stanley D. Matchett**, Jefe, asistido por **Rachel F. Brown** y **Roger O. Lepage**, Asistentes al Jefe de la División. Los siguientes Jefes de Secciones fueron responsables de servicios de apoyo: **Donald R. Dalzell**, **Stephen E. Goldman**, **Judith A. McKay**, **Dennis W. Stoudt** y **Richard R. Warren**. La Sección de Áreas del Exterior de los Estados Unidos estuvo bajo la dirección de **Irma F. Harahush**, Jefe Interino.

La responsabilidad de desarrollar la porción de vivienda en el contenido del cuestionario del censo de 1980, de diseñar las tabulaciones y de preparar este informe descansó en la División de Vivienda, bajo la supervisión de **Arthur F. Young**, Jefe, **Leonard J. Norry**, Asistente al Jefe, y **William A. Downs**, Jefe de Sección. Este informe fue preparado por **Robert W. Bonnette**, **Sherry A. Briscoe** e **Higinio Feliciano**. Contribuciones importantes fueron hechas por **Carmina F. Young**, Asistente Especial.

El apoyo administrativo fue provisto por la División de Servicios Administrativos, **Robert L. Kirkland**, Jefe, y **William C. Fanning**, Asistente al Jefe.

La elaboración de los datos por computadora se llevó a cabo en la División de Operaciones de Computadora, **C. Thomas DiNenna**, Jefe, **James E. Steed**, **George M. Bowden** y **Joseph F. Sferrella**, Asistentes al Jefe.

Los procedimientos para la elaboración de los cuestionarios fueron desarrollados por la Oficina de Elaboración Decenal, **James S. Werking**, entonces Jefe, bajo la dirección de **Harry O'Haver**, entonces Asistente al Jefe. La Elaboración manual y microfilmación de los cuestionarios de la muestra se llevó a cabo en la Oficina de Procesamiento en Laguna Niguel, **Robert N. Scheller**, Jefe.

Los servicios a los usuarios fueron proporcionados por la División de Servicios a los Usuarios de Datos, bajo la supervisión de **Michael G. Garland**, Jefe, **Marshall L. Turner, Jr.** y **Paul T. Zeisset**, Asistentes al Jefe.

Las actividades de recopilación de datos fueron supervisadas en la División de Campo por **Lawrence T. Love**, Jefe, bajo la dirección de **Richard Blass**, **Charles Hancock** y **George T. Reiner**, Asistentes al Jefe, con el apoyo de los directores y asistentes de los directores de las oficinas regionales del Negociado del Censo.

Los programas y la planificación geográfica se desarrollaron en la División de Geografía, bajo la dirección de **Robert W. Marx**, Jefe; **Joseph J. Knott** y **Silla G. Tomasi**, Asistentes al Jefe; y **Donald I. Hirschfeld**, Asistente Especial.

La revisión, diseño, composición y obtención de la impresión de las publicaciones fueron ejecutadas por el personal de la División de Servicios de Publicaciones, **Raymond J. Koski**, Jefe, **Milton S. Andersen**, **Arlene C. Duckett** y **Gerald A. Mann**, Jefes de Sección.

La División de Métodos Estadísticos fue por la mayor parte responsable de la ponderación

de los datos de la muestra y de producir estimaciones de la varianza. Esta labor fue supervisada por **Charles D. Jones**, Jefe; **Susan M. Miskura** y **Robert T. O'Reagan**, Asistentes al Jefe. Contribuciones importantes fueron hechas por **David H. Diskin**, **Milton C. Fan**, **Thomas W. Harahush**, **Robert S. Jewett**, **J. Kim**, **Teresa A. Passalacqua**, **John H. Thompson** y **Henry F. Woltman**.

El diseño del sistema, las especificaciones técnicas, el montaje e instalación de FOSDIC y el Sistema Tecnológico de Cámaras Automatizadas fueron la responsabilidad de la División de Servicios Técnicos, **C. Thomas DiNenna**, Jefe Interino y **Robert J. Varson**, Jefe de Sección.

Muchas otras personas participaron en las diversas actividades del censo de 1980. Para una lista del personal clave, refiérase a la publicación, *History of the 1980 Census of Population and Housing*, (PHC80-R2).

Remesas de países extranjeros deberán hacerse mediante giro postal internacional o letra de cambio contra un banco en los E.U.

# Guía para la Localización de las Tablas— Temas por Tipo de Área y Número de Tabla

Esta guía lista todos los temas cubiertos en este informe pero no indica todas las clasificaciones cruzadas (e.g., por tenencia). Los datos sobre las tasas de asignación aparecen en las tablas B-1 y B-2. Véase la introducción para el significado de las abreviaturas. Véase el apéndice A para una descripción de las clasificaciones del área. Véase el apéndice B para las definiciones y explicaciones de las características de los temas.

### GENERAL

Este informe es parte de la serie *Características Detalladas de la Vivienda* y presenta datos de la muestra del Censo de Población y Vivienda de 1980 sobre características detalladas de las unidades de vivienda de Puerto Rico, clasificadas por residencia urbana y rural y por tamaño del lugar, sus municipios, lugares de 2,500 o más habitantes, áreas estadísticas consolidadas estándares, áreas estadísticas metropolitanas estándares, áreas urbanizadas y ciertas otras áreas geográficas. La identificación abreviada de este informe es HC80-1-B (i.e. Censo de Vivienda, 1980—Volumen 1—Capítulo B) seguida por el número 53 representando a Puerto Rico. La disposición legal para este censo, el cual fue levantado al primero de abril de 1980, está contenida en la Ley del Congreso del 31 de agosto de 1954 (enmendada en agosto de 1957, diciembre de 1975 y octubre de 1976), la cual codifica el Título 13 del Código de los Estados Unidos.

Una gran porción de la información sobre viviendas recopilada en el Censo de Población y Vivienda de 1980 aparecerá en el Volumen 1, *Características de las Unidades de Vivienda*, del cual este informe es parte.

Las cifras totales de unidades de vivienda y de población para las varias entidades geográficas presentadas aquí pueden ser diferentes de las que aparecen en el

*Advance Report*, PHC80-V. Las diferencias reflejan correcciones de errores encontrados después de la preparación de dicho informe. Estos cambios pueden afectar cualquier área geográfica presentada en este informe. Diferencias pequeñas también pueden resultar de las técnicas de ponderación utilizadas para inflar las cifras de la muestra presentadas en este informe a totales de 100 por ciento. Véase el apéndice D para una discusión más detallada del procedimiento de estimación.

El contenido y los procedimientos del censo de 1980 se determinaron después de la evaluación de los resultados del censo de 1970, de consultas con una gran variedad de usuarios de datos censales y de extensas pruebas en el campo. En 1980 se introdujeron un número de cambios para mejorar la utilidad de los resultados del censo. Sin embargo, tales cambios no afectan a un grado apreciable la comparabilidad entre los datos del censo de 1980 y los datos del censo de 1970 para la mayoría de las características. Información adicional sobre comparabilidad aparece en el Apéndice B, "Definiciones y Explicaciones de las Características de los Temas."

Mediante solicitud escrita al Director del Negociado del Censo en Washington, D.C., 20233 se puede obtener información más detallada sobre los asuntos técnicos y procesales que se tratan en el texto de este informe. Tal información también se incluirá en otras publicaciones del censo de 1980.

### CONTENIDO DEL INFORME

Este informe consiste de un texto (esta introducción y cinco apéndices), una tabla de contenido, 26 tablas detalladas, y 3 tablas de asignaciones.

Un mapa de Puerto Rico aparece después de la tabla de contenido y presenta los nombres y límites de los

municipios, los nombres y los límites de las áreas estadísticas consolidadas estándares (AECE) y de las áreas estadísticas metropolitanas estándares (AEME), los nombres y la localización de todos los lugares con una población de 25,000 o más, y las ciudades centrales de AEME con menos de 25,000 habitantes. Luego siguen las tablas detalladas y las tablas que incluyen las asignaciones. La primera tabla en este informe es la tabla 18; las tablas 1 a la 17 aparecen en el informe *Características Generales de la Vivienda*, HC80-1-A, para Puerto Rico.

Cada tabla se identifica por un número y título. El encabezamiento a la izquierda debajo del título define los tipos de áreas geográficas para las cuales se presentan datos en la tabla particular y se considera parte del título de la tabla.

Una guía para la localización de las tablas lista las características cubiertas en este informe y muestra las tablas en las cuales aparecen los varios tipos de estadísticas.

La cantidad de detalle presentada en este informe es generalmente mayor para lugares grandes que para lugares pequeños. La cantidad mayor de detalle se presenta para Puerto Rico y sus partes urbanas y rurales, y para AECE, AEME, áreas urbanizadas, lugares con una población de 10,000 o más, y para municipios. Información un poco menos detallada se presenta para lugares de 2,500 a 10,000 habitantes y para las áreas rurales y las fincas en áreas rurales de municipios.

Últimos en el informe se encuentran los apéndices. El apéndice A describe las varias clasificaciones del área (e.g., residencia urbana y rural, lugares designados por el censo y áreas urbanizadas). El apéndice B presenta las definiciones y explicaciones de los temas cubiertos en este informe. El apéndice C explica brevemente las reglas de residencia que se utilizaron al contar la población y describe los procedimientos de recopilación y elaboración de datos.

El apéndice D presenta información sobre las fuentes de error en los datos, los procedimientos de revisión, y una descripción de las tablas de asignación B-1, B-2 y B-2a. El apéndice E contiene facsímiles de las páginas del cuestionario del censo de 1980 que contienen las preguntas de población y vivienda.

### CIFRAS DERIVADAS (Medianas y Por Cientos)

Este informe presenta medianas y por cientos, así como ciertas proporciones. La mediana—la cual es una clase de promedio—es el valor central de una distribución; i.e., la mediana divide la distribución en dos partes iguales: la mitad de los casos cae bajo la mediana y la otra mitad de los casos excede la mediana. Los por cientos y otras medidas derivadas que redondean a menos de 0.1 no se presentan pero se indican como cero (i.e., "-").

Las medianas para número de cuartos están redondeadas a la decena más cercana; para personas a la centésima más cercana; para valor a la centena de dólares más cercana; y para ingreso, gastos mensuales seleccionados del propietario, alquiler contractual y alquiler bruto al dólar más cercano. Al computar medianas para cuartos y personas en la unidad de vivienda, se usa el número entero como el punto medio del intervalo de modo que, por ejemplo, la categoría "3 cuartos" se trata como un intervalo que se extiende desde 2.5 hasta 3.5 cuartos. Al computar la mediana para alquiler se excluyen las unidades en la categoría, "Sin pago de alquiler en efectivo."

La mediana está computada basándose en la distribución según fue tabulada, la cual es en ocasiones más detallada que la distribución que se presenta en este informe. Cuando la mediana cae en la categoría terminal inferior de una distribución con intervalos de clase

abiertos, el método de presentación es mostrar el valor inicial de la próxima categoría seguido por un signo negativo: así, por ejemplo, si la mediana cae en la categoría "Menos de \$2,000," se presenta como "\$2,000-." Cuando la mediana cae en la categoría terminal superior de una distribución con intervalos de clase abiertos, se presenta el valor inicial de la categoría terminal seguido de un signo positivo; así, por ejemplo, si la mediana cae en la categoría "\$100,000 o más," se presenta como "\$100,000+."

### SÍMBOLOS Y ABREVIATURAS GEOGRÁFICAS

Los siguientes símbolos y abreviaturas geográficas se utilizan en las tablas:

- Una raya o guión "-" representa cero, o un por ciento que redondea a menos de 0.1.
- Tres puntos "... " significa que no es aplicable o que los datos no se publican para evitar revelar información sobre unidades de vivienda individuales. (Para más información sobre la divulgación de datos, véase la sección que aparece a continuación sobre "Supresión de Datos para Mantener la Confidencialidad.")
- (NA) significa que no está disponible.
- AECE significa área estadística consolidada estándar.
- AEME significa área estadística metropolitana estándar.

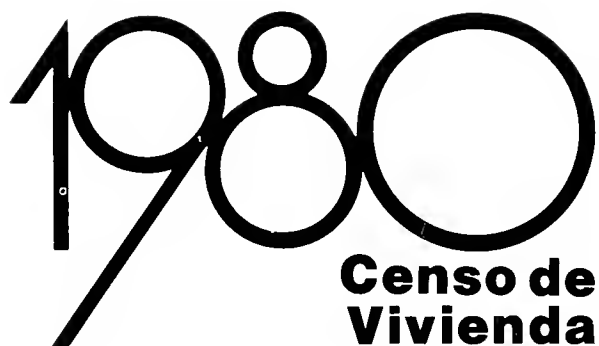

### SUPRESIÓN DE DATOS PARA MANTENER LA CONFIDENCIALIDAD

Para mantener la confidencialidad prometida a los informantes y requerida por ley, el Negociado del Censo toma precauciones para asegurarse de que los datos que se publican no revelan información sobre individuos y sobre unidades de vivienda específicas. Para lograr esto, el Negociado del Censo suprime datos

para características que están basados en un número pequeño de personas y/o unidades de vivienda en el área geográfica. Bajo ciertas condiciones se puede llevar a cabo tanto la supresión primaria como la complementaria, definidas a continuación.

Las reglas generales para la supresión primaria de los datos de la muestra son las siguientes: estimaciones de la población total nunca se suprimen; otras características para personas se presentan únicamente si hay 30 o más personas en el área geográfica; las estimaciones del total de unidades de vivienda, unidades de vivienda desocupadas, unidades de vivienda para uso todo el año, y de unidades de vivienda ocupadas nunca se suprimen; características de unidades de vivienda para uso todo el año que no son clasificadas por la condición de ocupación, se presentan únicamente cuando hay 10 o más unidades de vivienda para uso todo el año en el área geográfica; características de familias, de hogares o de unidades de vivienda ocupadas se presentan únicamente si existen por lo menos 10 unidades de vivienda ocupadas dentro del área geográfica; y distribuciones de datos para propietarios o inquilinos se presentan únicamente donde el número de propietarios es por lo menos 10 y el número de inquilinos es también por lo menos 10. Estos criterios para la supresión primaria se aplican independientemente unos de otros. Las cifras comparables para los datos del recuento completo (100 por ciento) son 15 o más personas y 5 o más unidades de vivienda del tipo especificado.

Finalmente, se aplica supresión complementaria para evitar la derivación de datos suprimidos primariamente mediante la resta. Por ejemplo, datos sobre unidades de vivienda presentados por tenencia podrían requerir supresión complementaria cuando el número de unidades de vivienda ocupadas por propietarios u ocupadas por inquilinos es menor de 10.

#### NOTA SOBRE CORRECCIONES

Se han hecho correcciones a las cifras del censo de 1980 sobre los totales de población y de unidades de vivienda para algunas de las áreas presentadas en este informe. Puede encontrar estas correcciones en la nota sobre correcciones que aparece en los informes PC80-1-B, Características Generales de la Población y HC80-1-A, Características Generales de la Vivienda, para Puerto Rico. Toda corrección adicional hecha después de imprimir dichos informes puede obtenerse mediante solicitud por escrito a Data User Services Division, Customer Services (Corrections), Bureau of the Census, Washington, D.C. 20233.

En este informe, las cifras sobre mediana de ingreso para unidades de vivienda ocupadas fueron calculadas usando interpolación lineal. Esto difiere de la metodología utilizada en otros informes del censo de 1980. En los otros informes, las cifras sobre mediana de ingreso menores de \$20,000 fueron derivadas mediante interpolación lineal y las cifras sobre mediana de ingreso de \$20,000 o más fueron derivadas utilizando la interpolación de Pareto.

**Tabla 18. Resumen de las Características Detalladas de la Vivienda: 1980**

Tabla 22a. **Características Estructurales para Ciudades: 1980**

[Los datos son estimaciones basadas en una muestra, véase la Introducción. Para el significado de los símbolos véase la Introducción. Refiérase a los apéndices A y B para las definiciones de los términos.]

**Ciudades de 50,000 o Más**

**AÑO EN QUE SE CONSTRUYÓ LA ESTRUCTURA**

Unidades de vivienda para uso todo el año ..	Ponce ciudad	San Juan ciudad
1979 a marzo de 1980 .....	34 022	136 712
1975 a 1978 .....	261	1 680
1970 a 1974 .....	2 253	8 654
1960 a 1969 .....	6 317	16 840
1950 a 1959 .....	8 970	36 435
1940 a 1949 .....	7 710	39 316
1939 a antes .....	4 601	19 151
	3 910	14 636

**Unidades de vivienda ocupadas por propietarios**

Unidades de vivienda ocupadas por propietarios .....	Ponce ciudad	San Juan ciudad
1979 a marzo de 1980 .....	19 509	62 583
1975 a 1978 .....	82	510
1970 a 1974 .....	1 586	4 059
1960 a 1969 .....	4 014	6 579
1950 a 1959 .....	5 694	17 629
1940 a 1949 .....	3 722	19 363
1939 a antes .....	2 219	8 645
	2 192	5 798

**Unidades de vivienda ocupadas por inquilinos**

Unidades de vivienda ocupadas por inquilinos ..	Ponce ciudad	San Juan ciudad
1979 a marzo de 1980 .....	11 454	58 441
1975 a 1978 .....	166	650
1970 a 1974 .....	421	3 198
1960 a 1969 .....	1 883	7 406
1950 a 1959 .....	2 443	14 604
1940 a 1949 .....	3 293	16 438
1939 a antes .....	1 935	8 863
	1 313	7 282

**DORMITORIOS**

Unidades de vivienda para uso todo el año ..	Ponce ciudad	San Juan ciudad
Ninguna .....	34 022	136 712
1 .....	529	4 106
2 .....	3 869	19 680
3 .....	7 831	34 093
4 .....	16 134	59 586
5 o más .....	4 410	14 412
	1 249	4 835

**Unidades de vivienda ocupadas por propietarios**

Unidades de vivienda ocupadas por propietarios .....	Ponce ciudad	San Juan ciudad
Ninguna .....	19 509	62 583
1 .....	159	564
2 .....	1 189	3 894

4 .....	10 655	32 982
5 o más .....	3 342	9 806
	944	3 472

**Unidades de vivienda ocupadas por inquilinos**

Unidades de vivienda ocupadas por inquilinos ..	Ponce ciudad	San Juan ciudad
Ninguna .....	11 454	58 441
1 .....	298	2 562
2 .....	2 025	12 825
3 .....	3 562	18 011
4 .....	4 401	20 060
5 o más .....	904	3 863
	264	1 120

**TIPO DE CONSTRUCCIÓN**

Unidades de vivienda para uso todo el año ..	Ponce ciudad	San Juan ciudad
Paredes de mampostería con techo de concreto ..	34 022	136 712
Paredes de mampostería con techo de armazón de madera ..	18 838	116 134
Paredes de madera con cimientos de mampostería ..	2 309	6 351
Paredes de madera con cimientos de pilotes de madera ..	4 772	7 453
Paredes de mampostería y madera ..	6 869	5 005
Otro tipo de construcción ..	926	1 392
	308	377

**UNIDADES EN LA ESTRUCTURA**

Unidades de vivienda para uso todo el año ..	Ponce ciudad	San Juan ciudad
1, separada .....	34 022	136 712
1, unida a una o más casas .....	23 364	57 988
2 .....	3 611	15 113
3 y 4 .....	573	6 400
5 a 9 .....	527	5 171
10 a 49 .....	1 178	7 457
50 o más .....	3 609	22 633
Casa móvil o remolque, etc. ....	1 149	21 901
	11	49

**Unidades de vivienda ocupadas por propietarios**

Unidades de vivienda ocupadas por propietarios .....	Ponce ciudad	San Juan ciudad
1, separada .....	19 509	62 583
1, unida a una o más casas .....	16 765	41 209
2 .....	1 905	5 890
3 y 4 .....	167	2 192
5 o más .....	37	607
Casa móvil o remolque, etc. ....	628	12 654
	7	31

**Unidades de vivienda ocupadas por inquilinos**

Unidades de vivienda ocupadas por inquilinos ..	Ponce ciudad	San Juan ciudad
1, separada .....	11 454	58 441
1, unida a una o más casas .....	4 648	12 068
2 .....	1 440	7 724
3 y 4 .....	340	3 566
5 a 9 .....	475	4 057
10 a 49 .....	1 033	5 926
50 o más .....	3 011	15 516
Casa móvil o remolque, etc. ....	503	9 566
	4	18

**UNIDADES EN LA ESTRUCTURA POR ALQUILER BRUTO**

Unidades de vivienda especificadas, ocupadas por inquilinos ..	Ponce ciudad	San Juan ciudad
1, casa móvil o remolque, etc. ....	11 433	58 309
Alquiler bruto mediano .....	6 071	19 678
2 o más .....	\$124	\$165
Alquiler bruto mediano .....	5 362	38 631
	\$65	\$108

Tabla 26. **Equipo y Facilidades Sanitarias para Lugares de 10,000 a 50,000: 1980—Con.**

[Los datos son estimaciones basadas en una muestra; véase la Introducción. Para el significado de los símbolos véase la Introducción. Refiérase a los apéndices A y B para las definiciones de los términos.]

**Lugares**

Unidades de vivienda para uso todo el año ..  
Facilidades de cocina completas .....

**CUARTOS DE BAÑO**

Ninguno .....  
Solo medios cuartos de baño .....  
1 cuarto de baño completo .....  
1 cuarto de baño completo más medios cuartos de baño .....  
2 o más cuartos de baño completos .....

**ABASTECIMIENTO DE AGUA**

Acueducto público .....  
Pozo privado .....  
Aljibe, tanques, o drones .....  
Manantial u otra fuente .....

**DISPOSICIÓN DE AGUAS NEGRAS**

Alcantarillado público .....  
Pozo séptico o pozo negro .....  
Otros medios .....

**AIRE ACONDICIONADO**

Ninguno .....  
Sistema central .....  
1 o más unidades individuales para cuarto .....

**ALUMBRADO ELÉCTRICO**

Con alumbrado eléctrico .....  
Sin alumbrado eléctrico .....

**CONDICIÓN DE LA UNIDAD DE VIVIENDA**

Unidades de vivienda para usa todo el año ..  
Construcción original adecuada .....  
Buena .....  
Deteriorándose .....  
Dilapidada .....  
Construcción original inadecuada .....

Unidades de vivienda ocupadas por  
propietarios .....

Construcción original adecuada .....  
Buena .....  
Deteriorándose .....  
Dilapidada .....  
Construcción original inadecuada .....

Unidades de vivienda ocupadas por inquilinos ..  
Construcción original adecuada .....  
Buena .....

\$260 a \$269 ..... 39  
\$270 a \$279 ..... 29  
\$280 a \$289 ..... 16  
\$290 a \$299 ..... 15  
\$300 a más ..... 32  
Sin pago de alquiler en efectivo ..... 237  
Mediana ..... 593

INGRESO DEL HOGAR EN 1979

Unidades de vivienda ocupadas ..... 8 499  
Ingreso mediano ..... \$4 975  
Unidades de vivienda ocupadas por propietarios ..... 7 228  
Ingreso mediano ..... \$6 689  
Unidades de vivienda ocupadas por inquilinos ..... 1 271  
Ingreso mediano ..... \$3 506

INGRESO EN 1979 POR DEBAJO DEL NIVEL DE  
POBREZA

Unidades de vivienda ocupadas por propietarios ..... 2 009  
Por ciento por debajo del nivel de pobreza ..... 27 8  
Con todas las facilidades sanitarias para uso exclusivo ..... 2 009  
1 01 a más personas por cuarto ..... 144  
Sin alguna a todas las facilidades sanitarias para uso  
exclusivo ..... 163  
1 01 a más personas por cuarto ..... 17  
Unidades de vivienda ocupadas por inquilinos ..... 525  
Por ciento por debajo del nivel de pobreza ..... 41 3  
Con todas las facilidades sanitarias para uso exclusivo ..... 525  
1 01 a más personas por cuarto ..... 45  
Sin alguna a todas las facilidades sanitarias para uso  
exclusivo ..... 99  
1 01 a más personas por cuarto ..... 20

Tabla 30. **Equipo y Facilidades Sanitarias para Municipios: 1980**

[Los datos son estimaciones basadas en una muestra véase la introducción Para el significado de los símbolos véase la introducción Refiérase a los apéndices A y B para las definiciones de los términos.]

**Municipios**

Unidades de vivienda para uso todo el año  
Facilidades de cocina completas

**CUARTOS DE BAÑO**

Ninguno  
Solo medias cuartos de baño  
1 cuarto de baño completo  
1 cuarto de baño completo más medias cuartos de baño  
2 o más cuartos de baño completos

**ABASTECIMIENTO DE AGUA**

Acueducto público  
Pozo privado  
Aljibe tanques, o dranes  
Manantial u otra fuente

**DISPOSICIÓN DE AGUAS NEGRAS**

Alcantarillado público  
Pozo séptico o pozo negro  
Otros medios

**AIRE ACONDICIONADO**

Ninguno  
Sistema central  
1 o más unidades individuales por cuarto

**ALUMBRADO ELÉCTRICO**

Con alumbrado eléctrico  
Sin alumbrado eléctrico

**CONDICIÓN DE LA UNIDAD DE VIVIENDA**

Unidades de vivienda para uso todo el año  
Construcción original adecuada  
Buena  
Deteriorándose  
Dilapidada  
Construcción original inadecuada

Unidades de vivienda ocupadas por propietarios  
Construcción original adecuada  
Buena  
Deteriorándose  
Dilapidada  
Construcción original inadecuada

Unidades de vivienda ocupadas por inquilinos  
Construcción original adecuada  
Buena  
Deteriorándose  
Dilapidada  
Construcción original inadecuada

Unidades de vivienda ocupadas  
Sin teléfono

**VEHÍCULOS DISPONIBLES**

Total  
Ninguno  
1  
2  
3 o más  
Automóviles  
Ninguno  
1  
2  
3 o más  
Camiones cubiertos o descubiertos  
Ninguno  
1  
2  
3 o más

**AÑO EN QUE EL JEFE DE HOGAR SE MUDÓ A LA UNIDAD**

Unidades de vivienda ocupadas por propietarios  
1979 a marzo de 1980  
1975 a 1978  
1970 a 1974  
1960 a 1969  
1950 a 1959  
1949 o antes  
Unidades de vivienda ocupadas por inquilinos  
1979 a marzo de 1980  
1975 a 1978  
1970 a 1974  
1960 a 1969  
1959 o antes

**CARACTERÍSTICAS DE LAS UNIDADES DE VIVIENDA CON JEFE DE HOGAR O CONYUGE DE 65 AÑOS O MÁS**

Unidades de vivienda ocupadas  
Unidades de vivienda ocupadas por propietarios  
Sin alguna o todas las facilidades sanitarias para uso exclusivo  
Sin facilidades de cocina completas  
Sin vehículo disponible  
Sin teléfono  
Sin alumbrado eléctrico  
Sin aire acondicionado

Tabla 30. **Equipo y Facilidades Sanitarias para Municipios: 1980—Con.**

[Los datos son estimaciones basadas en una muestra véase la introducción Para el significado de los símbolos véase la introducción Retérase a los apéndices A y B para las definiciones de los términos]

**Municipios**

Unidades de vivienda para uso toda el año  
Facilidades de cocina completas

**CUARTOS DE BAÑO**

Ninguno  
Solo medios cuartos de baño  
1 cuarto de baño completo  
1 cuarto de baño completo más medias cuartos de baño  
2 o más cuartos de baño completos

**ABASTECIMIENTO DE AGUA**

Acueducto público  
Pozo privado  
Aljibe, tanques, o drones  
Monontial u otra fuente

**DISPOSICIÓN DE AGUAS NEGRAS**

Alcantarillado público  
Pozo séptico o pozo negro  
Otras medias

**AIRE ACONDICIONADO**

Ninguno  
Sistema central  
1 o más unidades individuales para cuarto

**ALUMBRADO ELÉCTRICO**

Con alumbrado eléctrico  
Sin alumbrado eléctrico

**CONDICIÓN DE LA UNIDAD DE VIVIENDA**

Unidades de vivienda para uso toda el año  
Construcción original adecuada  
Buena  
Oeteriorándose  
Dilapidada  
Construcción original inadecuada

**Unidades de vivienda ocupadas por propietarios**

Construcción original adecuada  
Buena  
Oeteriorándose  
Dilapidada  
Construcción original inadecuada

**Unidades de vivienda ocupadas por inquilinos**

Construcción original adecuada

Tabla 30. **Equipo y Facilidades Sanitarias para Municipios: 1980—Con.**

[Los datos son estimaciones basadas en una muestra véase la Introducción Para el significado de los símbolos véase la Introducción Refiérase a los apéndices A y B para las definiciones de los términos]

**Municipios**

Unidades de vivienda para uso todo el año --  
Facilidades de cocina completas -----

**CUARTOS DE BAÑO**

Ninguna -----  
Sola medias cuartos de baño -----  
1 cuarto de baño completo -----  
1 cuarto de baño completo más medias cuartos de baño -----  
2 o más cuartos de baño completos -----

**ABASTECIMIENTO DE AGUA**

Acueducto público -----  
Pozo privado -----  
Aljibe, tanques, o drones -----  
Manantial u otra fuente -----

**DISPOSICIÓN DE AGUAS NEGRAS**

Alcantarillado público -----  
Pozo séptico o pozo negro -----  
Otros medios -----

**AIRE ACONDICIONADO**

Ninguna -----  
Sistema central -----  
1 o más unidades individuales para cuarto -----

**ALUMBRADO ELÉCTRICO**

Con alumbrado eléctrico -----  
Sin alumbrado eléctrico -----

**CONDICIÓN DE LA UNIDAD DE VIVIENDA**

Unidades de vivienda para uso todo el año --  
Construcción original adecuada -----  
Buena -----  
Deteriorándose -----  
Dilapidada -----  
Construcción original inadecuada -----

Unidades de vivienda ocupadas por propietarios -----

Construcción original adecuada -----  
Buena -----  
Deteriorándose -----  
Dilapidada -----  
Construcción original inadecuada -----

Unidades de vivienda ocupadas por inquilinos -----

Construcción original adecuada -----  
Buena -----  
Deteriorándose -----  
Dilapidada -----  
Construcción original inadecuada -----

Unidades de vivienda ocupadas -----

Sin teléfono -----

**VEHÍCULOS DISPONIBLES**

Total -----  
Ninguna -----  
1 -----  
2 -----  
3 o más -----

Automóviles -----  
Ninguna -----  
1 -----  
2 -----  
3 o más -----

Camiones cubiertos o descubiertos -----  
Ninguna -----  
1 -----  
2 -----  
3 o más -----

**AÑO EN QUE EL JEFE DE HOGAR SE MUDO A LA UNIDAD**

Unidades de vivienda ocupadas por propietarios -----

1979 o marzo de 1980 -----  
1975 a 1978 -----  
1970 a 1974 -----  
1960 a 1969 -----  
1950 a 1959 -----  
1949 o antes -----

Unidades de vivienda ocupadas por inquilinos -----

1979 o marzo de 1980 -----  
1975 a 1978 -----  
1970 a 1974 -----  
1960 a 1969 -----  
1959 o antes -----

**CARACTERÍSTICAS DE LAS UNIDADES DE VIVIENDA CON JEFE DE HOGAR O CÓNYUGE DE 65 AÑOS O MÁS**

Unidades de vivienda ocupadas -----

Unidades de vivienda ocupadas por propietarios -----  
Sin alguno o todas las facilidades sanitarias para uso exclusivo -----  
Sin facilidades de cocina completas -----  
Sin vehículo disponible -----  
Sin teléfono -----  
Sin alumbrado eléctrico -----  
Sin aire acondicionado -----

Tabla 32. **Características de la Ocupación, de la Utilización, de las Facilidades Sanitarias y Financieras de las Unidades de Vivienda en Áreas Rurales: 1980—Con.**

[Los datos son estimaciones basadas en una muestra; véase la Introducción. Para el significado de los símbolos, véase la Introducción. Refiérase a los apéndices A y B para las definiciones de los términos]

**Puerto Rico  
Municipios**

**Total de unidades de vivienda** -----  
Vacante estacional -----  
Unidades de vivienda para uso todo el año -----

**UNIDADES DE VIVIENDA PARA USO TODO EL AÑO**

**Personas**

**Total de personas** -----  
Personas en unidades de vivienda ocupadas -----  
Por unidad de vivienda ocupada -----  
Unidades de vivienda ocupadas por propietarios -----  
Unidades de vivienda ocupadas por inquilinos -----

**Tenencia**

Unidades de vivienda ocupadas por propietarios -----  
Unidades de vivienda ocupadas por inquilinos -----

**Clasificación de la Vacancia**

**Unidades de vivienda desocupadas** -----  
Para venta únicamente -----  
Desocupadas por menos de 6 meses -----  
Precia mediana solicitada -----  
Para alquiler -----  
Desocupadas por menos de 2 meses -----  
Alquiler mediana solicitada -----  
Otras vacantes -----

**Facilidades Sanitarias**

**Unidades de vivienda para uso todo el año** -----  
Todas las facilidades sanitarias para uso exclusiva -----  
Con agua por tuberías, caliente y fría -----  
Con agua por tuberías, fría únicamente -----  
Sin alguna o todas las facilidades sanitarias para uso exclusivo -----  
Todas las facilidades sanitarias, pero usadas por otro hogar -----  
Algunas, pero no todas las facilidades sanitarias -----  
Sin facilidades sanitarias -----  
**Unidades de vivienda ocupadas** -----  
Todas las facilidades sanitarias para uso exclusiva -----  
Con agua por tuberías, caliente y fría -----  
Con agua por tuberías, fría únicamente -----  
Sin alguna o todas las facilidades sanitarias para uso exclusivo -----  
Todas las facilidades sanitarias, pero usadas por otro hogar -----  
Algunas, pero no todas las facilidades sanitarias -----  
Sin facilidades sanitarias -----

**Valor**

**Unidades de vivienda especificadas, ocupadas por propietarios** -----  
Menos de \$2,000 -----  
\$2,000 a \$4,999 -----  
\$5,000 a \$9,999 -----  
\$10,000 a \$19,999 -----  
\$20,000 a \$29,999 -----  
\$30,000 a \$39,999 -----  
\$40,000 a \$49,999 -----  
\$50,000 a más -----  
Mediana -----

**Alquiler Contractual**

**Unidades de vivienda especificadas, ocupadas por inquilinos** -----  
Mediana -----

**Cuartos**

**Unidades de vivienda para uso todo el año** -----  
1 cuarto -----  
2 cuartos -----  
3 cuartos -----  
4 cuartos -----  
5 cuartos -----  
6 cuartos -----  
7 cuartos -----  
8 cuartos o más -----  
Mediana, unidades de vivienda para uso todo el año -----  
Mediana, unidades de vivienda ocupadas -----  
Mediana, unidades de vivienda ocupadas por propietarios -----  
Mediana, unidades de vivienda ocupadas por inquilinos -----

**Personas en la Unidad**

**Unidades de vivienda ocupadas** -----  
1 persona -----  
2 personas -----  
3 personas -----  
4 personas -----  
5 personas -----  
6 personas -----  
7 personas -----  
8 personas o más -----  
Mediana, unidades de vivienda ocupadas -----  
Mediana, unidades de vivienda ocupadas por propietarios -----  
Mediana, unidades de vivienda ocupadas por inquilinos -----

**Personas por Cuarto**

**Unidades de vivienda ocupadas** -----  
1.00 o menos -----  
1.01 a 1.50 -----  
1.51 o más -----

**Todas las facilidades sanitarias para uso exclusivo**

1.00 o menos -----  
1.01 a 1.50 -----  
1.51 o más -----

PUERTO RICO

Los 78 municipios son las partes componentes de Puerto Rico.

MUNICIPIOS

En Puerto Rico las divisiones primarias se conocen como municipios. Cada municipio tiene límites establecidos legalmente y constituye una entidad gubernamental. Dos municipios han sido creados desde 1970, Canóvanas y Florida, los cuales fueron separados de los Municipios de Loíza y Barceloneta respectivamente. Cada municipio con la excepción de Florida, contiene una ciudad o pueblo

en la cual se encuentra ubicada la sede de gobierno. El municipio de Florida tiene su sede de gobierno ubicada en el barrio Florida Adentro.

SUBDIVISIONES DE MUNICIPIOS

Se presentan estadísticas para subdivisiones de municipios conocidas como: ciudades y pueblos. Los barrios son las subdivisiones primarias de los municipios. Los barrios tienen límites establecidos legalmente, pero no constituyen una entidad gubernamental. "Ciudad" o "pueblo" es el nombre dado al barrio o grupo de barrios que identifican el centro de gobierno del municipio. Las ciudades, pueblos y barrios sirven esencialmente como distritos electorales y como la base para la distribución proporcional en la legislatura de Puerto Rico. Muchas subdivisiones de municipios han sido redefinidas desde el 1970 para reflejar sus límites legales, los cuales en muchos casos no fueron utilizados en los informes del censo de 1970. En Puerto Rico hay dos ciudades, Ponce y San Juan, las cuales consisten de grupos de barrios.

LUGARES

Los informes del censo de Puerto Rico reconocen un tipo de lugar, los lugares designados por el censo. Estos lugares se identifican como zonas urbanas y aldeas.

En este informe, las ciudades centrales de áreas estadísticas metropolitanas estándares se presentan sólo en las tablas designadas ". . .para Áreas y Lugares," no importa el número de habitantes. Por lo tanto, una ciudad central con una población entre 10,000 y 50,000 no aparecerá en las tablas para lugares de 10,000 a 50,000 habitantes. Lugares con una población en el 1980 de menos de 2,500

habitantes, no se presentan en este informe.

Los informes del censo de los Estados reconocen los lugares incorporados, además de los lugares designados por el censo. Los lugares incorporados reconocidos en los informes del censo de los Estados son aquéllos que se han incorporado bajo las leyes de sus respectivos Estados como ciudades, condados, pueblos y aldeas. En Puerto Rico no hay lugares incorporados. Aunque las ciudades y pueblos en Puerto Rico tienen límites establecidos legalmente, no son incorporados y para propósitos censales se reconocen como subdivisiones de municipios y no como lugares.

Lugares Designados por el Censo

Al igual que en los censos de 1950, 1960 y 1970, el Negociado del Censo, en cooperación con el gobierno de Puerto Rico, delineó límites para áreas densamente pobladas sin límites corporativos. En 1980, se refiere a dichos lugares como "lugares designados por el censo" (LDC). En Puerto Rico, los LDC se identifican como "zonas urbanas" y "aldeas". Para ser reconocidas en el censo de 1980, las aldeas deben tener una población mínima de 1,000 habitantes en 1980; sin embargo, las zonas urbanas se reconocen no importa el tamaño de la población.

Los límites de los lugares designados por el censo varían de acuerdo a los cambios en los patrones de desarrollo residencial; un lugar que tiene el mismo nombre que en censos anteriores no necesariamente tiene los mismos límites. Los contornos de los límites de los LDC se presentan en el mapa de subdivisiones del municipio que aparece en el informe HC80-1-A, *Características Generales de la Vivienda*, para Puerto Rico. El Negociado del Censo tiene mapas detallados disponibles para la venta.

**Zonas Urbanas**—Las zonas urbanas se componen de la sede del gobierno municipal y el área desarrollada adyacente. Las zonas urbanas son delineadas por la Junta de Planificación de Puerto Rico bajo la autorización de la Ley de Planificación de Puerto Rico de 1975. Se publican las cifras para todas las zonas urbanas no importa el número de habitantes. En 1970, las zonas urbanas fueron erróneamente llamadas ciudades y pueblos, y los límites legales de la ciudad/pueblo no fueron reconocidos. Las zonas urbanas no habían sido reconocidas antes del censo de 1970.

**Aldeas**—Las aldeas son núcleos densamente poblados sin límites legales definidos. Los límites de las aldeas fueron delineados por la Junta de Planificación de Puerto Rico siguiendo los procedimientos establecidos por el Negociado del Censo.

### RESIDENCIA URBANA Y RURAL

Según se define para el censo de 1980, la vivienda urbana se compone de todas las unidades de vivienda en áreas urbanizadas y en lugares de 2,500 o más habitantes fuera de áreas urbanizadas. Más específicamente, la vivienda urbana consiste de todas las unidades de vivienda en (1) lugares de 25,000 o más habitantes identificados como zonas urbanas y aldeas y (2) otros territorios incluidos en áreas urbanizadas. Las unidades de vivienda que no se clasifican como urbanas constituyen la vivienda rural. Información sobre el desarrollo histórico de la definición de residencia urbana-rural se presenta en el informe del Censo de Población de 1980, *Características de la Población, Número de Habitantes*, PC80-1-A, para Puerto Rico.

### Residencia en Fincas y No en Fincas

En áreas rurales, las unidades de vivienda ocupadas se subdividen en viviendas rurales en fincas, que consisten de todas las unidades en fincas en áreas rurales y viviendas rurales no en fincas, que consisten de las unidades restantes en áreas rurales. Las unidades de vivienda ocupadas se clasifican como unidades en fincas si se encuentran en lugares de 3 o más cuerdas en los cuales existen opera-

ciones agrícolas, o en lugares de menos de 3 cuerdas de los cuales la venta de productos agrícolas ascendió a \$100 o más durante el 1979. (Véase las preguntas H13a y H13b en el Apéndice E, "Fac-símiles de las Páginas del Cuestionario.") La definición de finca para Puerto Rico ha permanecido sin cambio desde el censo de 1970.

Las unidades ocupadas en territorio rural que no reúnen los requisitos de la definición de viviendas en fincas, se clasifican como no en fincas. Todas las unidades desocupadas en áreas rurales también se clasifican como no en fincas. La información sobre unidades de vivienda no en fincas no se presenta separadamente en este informe, sin embargo, se puede obtener restando las cifras para la vivienda en fincas en áreas rurales de las cifras para la vivienda en áreas rurales.

### ÁREAS URBANIZADAS

#### Definición

El objetivo principal del Negociado del Censo al delinear áreas urbanizadas es el de proveer una separación más adecuada entre la población y la vivienda urbana y rural en la vecindad de ciudades grandes. Un área urbanizada consiste de una ciudad o ciudades centrales y el territorio densamente poblado que la rodea, o la "franja urbana."

Los siguientes criterios se utilizan al determinar la elegibilidad y definición de áreas urbanizadas en 1980:<sup>1</sup>

Un área urbanizada consiste de un lugar y el área adyacente densamente poblada que le rodea y que juntos tienen una población mínima de 50,000 habitantes.<sup>2</sup> El área adyacente densamente poblada consiste de:

1. Lugares contiguos que tienen:
  - a. Una población de 2,500 o más habitantes; o
  - b. Una población menor de 2,500 habitantes pero con una densidad

<sup>1</sup> Todas las referencias a cifras de población y densidades poblacionales se relacionan a datos del censo de 1980.

<sup>2</sup> Para que un área urbanizada sea reconocida, tiene que incluir una población de por lo menos 25,000 habitantes que no residan en una base militar.

poblacional de 1,000 personas por milla cuadrada, un área densamente poblada que contiene un mínimo de 50 por ciento de la población, o una agrupación de por lo menos 100 unidades de vivienda.

2. Un área contigua que se conecta por carretera y tiene una densidad poblacional de por lo menos 1,000 personas por milla cuadrada.<sup>3</sup>
3. Otra área contigua con una densidad de menos de 1,000 personas por milla cuadrada siempre y cuando ésta:
  - a. Elimine un enclave de menos de 5 millas cuadradas que esté rodeado de un área desarrollada.
  - b. Cierre una indentación en los límites de un área densamente poblada que no mida más de una milla a lo ancho en la parte abierta y abarque una superficie no mayor de 5 millas cuadradas.
  - c. Conecte un área exterior de una densidad que califique, siempre que tal área esté:
    - (1) Conectada por carretera a, y no quede a más de 1½ millas de, el cuerpo principal del área urbanizada.
    - (2) Separada del cuerpo principal del área urbanizada por agua u otra área que no es desarrollable, esté conectada por carretera al cuerpo principal del área urbanizada, y quede a no más de 5 millas del cuerpo principal del área urbanizada.
4. Grandes concentraciones de áreas urbanas no residenciales (tales como parques industriales, áreas de oficinas y aeropuertos principales) que tienen por los menos una cuarta parte de sus límites contiguos a un área urbanizada.

Un mapa de cada área urbanizada en Puerto Rico aparece en el informe del Censo de Vivienda de 1980, HC80-1-A, *Características Generales de la Vivienda*, para Puerto Rico.

<sup>3</sup> Cualquier área de terreno urbano de extenso uso no residencial, tal como aeropuertos, fábricas, parques, campos de golf y cementerios, se excluye al computar la densidad poblacional.

### Títulos de Áreas Urbanizadas

1. Los títulos de áreas urbanizadas que existían antes del Censo de Población y Vivienda de 1980 se han mantenido sin cambio excepto en casos donde ha habido consolidaciones y en aquellas áreas que llenan los requisitos de la sección 4 de los criterios para la asignación de títulos.
2. Los títulos de áreas urbanizadas nuevas que califican como resultado del censo de 1980 se determinan de la manera siguiente:
  - a. El nombre del lugar de mayor población en el área urbanizada siempre se incluye en el título.
  - b. Los nombres de hasta dos lugares adicionales se pueden incluir en el título, con la elegibilidad determinada de la manera siguiente:
    - (1) Aquéllos con una población de por lo menos 250,000 habitantes.
    - (2) Aquéllos con una población de 15,000 a 250,000 habitantes, siempre que sean por lo menos una tercera parte de la población del lugar más grande en el área urbanizada.
3. Los títulos de áreas que incluyen los nombres de más de un lugar comienzan con el nombre del lugar más grande seguido por los demás en orden descendente de su población.
4. Se pueden utilizar títulos regionales para identificar áreas urbanizadas con una población de más de un millón, en cuyo caso solo la ciudad más grande del área urbanizada se incluye en el título.

### Ciudades Centrales de Áreas Urbanizadas

Las ciudades centrales de áreas urbanizadas son aquéllas mencionadas en los títulos, excepto donde se utilizan títulos regionales. En tales casos, las ciudades centrales son aquéllas que han calificado bajo las secciones 1 y 2 de los criterios para la asignación de títulos.

Las cifras y datos para ciudades centrales de áreas urbanizadas se refieren a la porción urbana de estas ciudades.

### ÁREAS ESTADÍSTICAS METROPOLITANAS ESTÁNDARES

#### Definición

El concepto general de un área metropolitana es el de un núcleo grande de población, conjuntamente con comunidades adyacentes que tienen un alto grado de integración económica y social con ese núcleo. La clasificación de área estadística metropolitana estándar (AEME) es un patrón estadístico desarrollado para uso por agencias Federales en la producción, análisis y publicación de datos sobre áreas metropolitanas. Las AEME son designadas y definidas por la Oficina de Administración y Presupuesto, siguiendo una serie de normas publicadas, oficiales, desarrolladas por el Comité Federal Interagencial sobre Áreas Estadísticas Metropolitanas Estándares.

Cada AEME en Puerto Rico tiene uno o más municipios centrales que contienen la concentración de población principal del área: un área urbanizada con una población de por lo menos 50,000 habitantes. Un AEME también puede incluir municipios cercanos que mantienen relaciones económicas y sociales estrechas con los municipios centrales. Los municipios centrales deberán tener un nivel especificado de tráfico de pasajeros a los municipios centrales y deberán, además, satisfacer ciertas normas con respecto a carácter metropolitano, tales como densidad poblacional, población urbana y crecimiento poblacional.

Las unidades de vivienda localizadas en las AEME se pueden denominar como la vivienda metropolitana. La vivienda localizada en AEME se subdivide en "dentro de la ciudad central (o ciudades centrales)" y "fuera de la ciudad central (o ciudades centrales)." Las unidades de vivienda localizadas fuera de las AEME constituyen la vivienda no metropolitana.

#### Títulos de AEME

La mayoría de las AEME tienen por lo menos una ciudad central. Los títulos de las AEME incluyen los nombres de hasta tres ciudades. Para el censo de 1980, las ciudades centrales de las AEME son aquéllas mencionadas en los títulos de las AEME. En Puerto Rico, donde no existen lugares incorporados reconocidos

por el Negociado del Censo, las zonas urbanas y las aldeas pueden ser reconocidas como ciudades centrales.

En este informe, las ciudades centrales de AEME, no importa el número de habitantes, se presentan solamente en las tablas designadas "... para Áreas y Lugares." Así, una ciudad central con una población entre 10,000 y 50,000 habitantes no aparecerá en las tablas para lugares de 10,000 a 50,000 habitantes.

### Nuevas Normas para AEME

El 3 de enero de 1980 se publicaron nuevas normas en el *Registro Federal* para designar y definir áreas estadísticas metropolitanas estándares. Las AEME reconocidas para el censo de 1980 comprenden (1) todas las áreas, incluyendo cuatro en Puerto Rico, según definidas al primero de enero de 1980, excepto por un área en los Estados Unidos que se definió provisionalmente durante la década del 70 a base de estimaciones de la población pero cuya clasificación no fue confirmada por las cifras del censo de 1980; y (2) 36 áreas nuevas, incluyendo una en Puerto Rico (Arecibo), definidas a base de las cifras del censo de 1980 y las nuevas normas que se publicaron el 3 de enero de 1980.

Las nuevas normas no se aplicarán a áreas existentes al primero de enero de 1980, hasta después que los datos sobre los patrones de tráfico de pasajeros estén disponibles de las tabulaciones del censo de 1980. En ese momento se revisarán los límites, definiciones y títulos para todas las AEME.

Para ayudar a los usuarios que quieren familiarizarse con las normas para la creación de las AEME y cómo se aplican, hay documentos disponibles en la Oficina de Administración y Presupuesto, Washington, D.C. 20503.

### ÁREAS ESTADÍSTICAS CONSOLIDADAS ESTÁNDARES

En algunas partes del país, el desarrollo metropolitano ha progresado al punto de que AEME adyacentes están interrelacionadas social y económicamente. Estas áreas se designan como áreas estadísticas consolidadas estándares (AECE) por la Oficina de Administración y Presupuesto, y se definen utilizando normas incluidas

como parte de las nuevas normas para AEME, descritas anteriormente.

### RELACIÓN ENTRE ÁREAS URBANIZADAS Y ÁREAS METROPOLITANAS

Aunque en concepto el área urbanizada y el área metropolitana están estrechamente relacionadas, existen diferencias importantes. El área urbanizada tiene una extensión de territorio más limitado. El área urbanizada consiste del territorio de desarrollo físico continuo alrededor de cada ciudad central y por lo tanto, generalmente corresponde al centro de densidad poblacional alta y mediana en el corazón del área metropolitana. En concepto, un área metropolitana es siempre más grande que su área urbanizada central; aun cuando el área metropolitana se define en términos de pequeñas manzanas de edificios, porque incluye zonas de desarrollo urbano y suburbano discontinuo más allá de la periferia del área de desarrollo continuo. El área metropolitana también puede incluir algún territorio rural cuyos residentes viajan a trabajar en la ciudad o sus inmediaciones, mientras que el área urbanizada no incluye tal territorio. En la práctica, debido a que las definiciones de AEME utilizan a los

municipios como sus partes componentes, con frecuencia se incluyen extensiones considerables de territorio rural con poco tráfico de pasajeros.

De vez en cuando una porción del área urbanizada se extiende a través del límite del AEME dentro de un municipio no metropolitano dentro de otra AEME. Sin embargo, tales porciones usualmente son muy pequeñas en área y población.

Las nuevas normas para AEME disponen que cada AEME se asocie con un área urbanizada. Sin embargo, lo opuesto no es cierto - hay algunas áreas urbanizadas que no se encuentran en ningún AEME. Esta situación ocurre cuando un área urbanizada no califica como AEME con una población de por lo menos 100,000 habitantes y el área urbanizada no tiene una ciudad con una población de por lo menos 50,000 habitantes.

Además, algunas AEME contienen más de un área urbanizada. Esto ocurre cuando:

1. Dos o más concentraciones urbanas no muy distantes entre sí y de un tamaño general similar tienen áreas urbanizadas separadas pero califican como una sola AEME. Frecuentemente, el título del AEME incluye el nombre de la ciudad más grande de

cada una de las áreas urbanizadas que las componen.

2. Un AEME muy grande incluye dentro de sus límites un área urbanizada grande y una o más áreas urbanizadas individuales más pequeñas.

### CAMBIOS EN LOS LÍMITES

Los límites de algunas de las áreas presentadas en este informe han cambiado desde un censo anterior y el primero de enero de 1980. Información sobre cambios en los límites de municipios y subdivisiones de municipios se presenta en la tabla 4 del informe del Censo de Población de 1980, *Características de la Población, Número de Habitantes, PC80-1-A* para Puerto Rico. Para información sobre cambios en los límites anteriores al 1970, véase el informe *Número de Habitantes* para cada censo.

### DIMENSIONES DE LAS ÁREAS

Las cifras sobre dimensiones del área para los municipios están disponibles en la tabla 2 del informe PC80-1-A para Puerto Rico.

### GENERAL

El Censo de Puerto Rico de 1980 se llevó a cabo mediante una combinación de autoenumeración y entrevista personal. El determinante principal para las respuestas fue, por lo tanto, el cuestionario y las instrucciones que le acompañaron. Además se les instruyó a los enumeradores que durante sus entrevistas personales leyeran las preguntas directamente del cuestionario. Las definiciones y explicaciones que se presentan a continuación para cada tema se tomaron mayormente

de varios documentos técnicos y procesales utilizados en la recopilación de los datos. Estos materiales ayudaron a los entrevistadores del censo a entender más cabalmente el objetivo de cada pregunta y a resolver problemas o casos poco usuales en forma consistente con dicho objetivo. También se incluye cierta información explicativa para ayudar al usuario en la utilización apropiada de las estadísticas.

Facsímiles de las páginas del cuestionario que contienen las preguntas de población y vivienda usadas para producir los datos que aparecen en este informe se presentan en el Apéndice E, "Facsímiles de las Páginas del Cuestionario."

### ALOJAMIENTOS

Los alojamientos se clasifican en el censo como unidades de vivienda o como alojamientos de grupo. Usualmente, los alojamientos se encuentran en estructuras destinadas para uso residencial (e.g., una casa de una familia, casa de apartamentos, hotel o motel, casa de huéspedes, casa móvil o remolque). Sin embargo, también se pueden encontrar alojamientos en estructuras destinadas para uso no residencial (e.g., los cuartos en un almacén donde vive un celador), al igual que en botes, tiendas de campaña, camiones cubiertos (vans), etc.

**Unidades de Vivienda**—Una unidad de vivienda es una casa, un apartamento, un grupo de cuartos, o un solo cuarto, ocupado como un alojamiento separado, o si desocupado, destinado a ser ocupado como un alojamiento separado. Alojamientos separados son aquellos en los cuales los ocupantes viven y comen separadamente de cualesquiera otras personas en el edificio y tienen acceso directo desde el exterior del edificio o a través de un pasillo común. Los

ocupantes pueden ser una sola familia, una persona viviendo sola, dos o más familias viviendo juntas, o cualquier otro grupo de personas emparentadas o no emparentadas, que comparten arreglos de vivienda (excepto según se describe en la próxima sección sobre Alojamientos de Grupo). Para unidades desocupadas, los criterios de separación y de acceso directo se aplican a los futuros ocupantes, siempre que sea posible. Si tal información no se puede obtener, los criterios se aplican a los ocupantes anteriores. Tanto las unidades de vivienda ocupadas como las desocupadas se incluyen en el inventario de unidades de vivienda, excepto que los botes, las tiendas de campaña, los camiones cubiertos (vans), las cuevas y otros similares se incluyen en el inventario solamente si están ocupados como el lugar habitual de residencia de alguna persona. Las casas móviles desocupadas se incluyen siempre y cuando estén destinadas a ser ocupadas en el lugar donde están localizadas. Las casas móviles desocupadas en solares de distribuidores o en almacenaje se excluyen del inventario de viviendas.

**Comparabilidad con los Datos del Censo de 1970 Sobre Unidades de Vivienda—**Aunque los datos del censo de 1980 son generalmente comparables con los datos del censo de 1970, se introdujeron ciertos cambios para el 1980. Se modificó la parte de la definición de unidad de vivienda de 1970 que requería que la unidad tuviera o (1) acceso directo o (2) facilidades de cocina para uso exclusivo. Para el 1980, fue eliminada la alternativa de facilidades de cocina para uso exclusivo, y acceso directo fue requerido de todas las unidades de vivienda. En 1970, las casas móviles desocupadas no se contaron como unidades de vivienda. Para 1980, éstas se incluyeron en el inventario de viviendas siempre que estuvieran destinadas a ser ocupadas en el lugar donde se encontraban.

**Alojamientos de Grupo—**Los alojamientos de grupo son cualesquiera alojamientos que no se clasifican como unidades de vivienda. Existen dos tipos de alojamientos de grupo: (1) alojamientos de grupo institucionales y (2) alojamientos de grupo no institucionales. Los alojamientos de grupo institucionales son alojamientos ocupados por una o más personas bajo cuidado o custodia, tales como

niños en un orfanato, personas en sanatorios privados y prisioneros en una penitenciaría. Los alojamientos de grupo no institucionales incluyen alojamientos tales como dormitorios que son propiedad de y/o se operan por una universidad, casas de fraternidades o sororidades, dormitorios para enfermeras y casas de huéspedes. Además, los alojamientos de grupo no institucionales incluyen cualesquiera alojamientos (otros que aquéllos clasificados como alojamientos de grupo institucionales) que están ocupados por 9 o más personas no emparentadas con la persona listada en la columna 1 del cuestionario censal, o por 10 o más personas no emparentadas entre sí. En el censo no se recopiló información sobre las características de vivienda de alojamientos de grupo.

**Comparabilidad con los Datos del Censo de 1970 Sobre Alojamientos de Grupo—**En 1970, una unidad se clasificó como alojamiento de grupo si se compartía por la persona a cargo y cinco o más personas no emparentadas con él o ella o, de no haber una persona a cargo, si se compartía por seis o más personas no emparentadas. Para 1980, ese requisito se aumentó a 9 o más personas no emparentadas con la persona listada en la columna 1 del cuestionario censal o 10 o más personas no emparentadas entre sí.

**Reglas para Hoteles, Casas de Huéspedes, etc.—**Los cuartos o apartamentos ocupados en hoteles, moteles, o lugares similares se clasifican como unidades de vivienda únicamente cuando están ocupados por residentes permanentes; i.e., personas quienes consideran el hotel como su lugar habitual de residencia o quienes no tienen una residencia habitual en otro lugar. Cuartos o apartamentos desocupados se clasifican como unidades de vivienda únicamente en aquellos hoteles en los cuales el 75 por ciento o más de sus facilidades están ocupadas por residentes permanentes.

Si algunos de los ocupantes en una casa de huéspedes o de pupilos viven y comen separadamente de las demás personas en el edificio y tienen acceso directo, sus habitaciones se clasifican como unidades de vivienda separadas. Las demás habitaciones se combinan. Si las habitaciones combinadas contienen ocho o menos huéspedes no emparentados con el jefe de hogar, éstas se clasifi-

can como una unidad de vivienda. Si las habitaciones combinadas contienen nueve o más huéspedes no emparentados con el jefe de hogar, o persona a cargo, éstas se clasifican como alojamientos de grupo.

**Alojamientos del Personal—**Los alojamientos ocupados por miembros del personal, dentro de cualquier alojamiento de grupo, son unidades de vivienda separadas si satisfacen los criterios para unidades de vivienda referentes a separación y acceso directo; de lo contrario, se consideran como alojamientos de grupo.

**Unidades de Vivienda para Uso Todo el Año—**Los datos sobre las características de la vivienda en los informes del censo de 1980 se limitan a las unidades de vivienda para uso todo el año; i.e., todas las unidades ocupadas más las unidades desocupadas disponibles o destinadas para uso todo el año. Las unidades desocupadas destinadas para ocupación estacional se excluyen debido a la dificultad en obtener información confiable sobre sus características.

## CARACTERÍSTICAS DE LA OCUPACIÓN Y DE LA VACANCIA

**Unidades de Vivienda Ocupadas—**Una unidad de vivienda se clasifica como ocupada si ésta es el lugar habitual de residencia de la persona o grupo de personas que viven en ella al momento de la enumeración, o si los ocupantes sólo están ausentes temporalmente; e.g., de vacaciones. Si al momento del censo, todas las personas que habitan la unidad tienen su residencia habitual en otro lugar, la unidad se clasifica como desocupada. Un hogar incluye a todas las personas que ocupan una unidad de vivienda como su residencia habitual. Por lo tanto, el número de unidades de vivienda ocupadas es, por definición, igual al número de hogares en los informes del Censo de Población de 1980. En este informe las cifras que se presentan para unidades de vivienda ocupadas son estimaciones basadas en una muestra. En algunos casos pueden haber pequeñas diferencias en las cifras para hogares que se presentan en los informes del Censo de Población. Tales diferencias pueden resultar de los procedimientos de elaboración utilizados

para inflar los datos de la muestra de la población y de las unidades de vivienda.

**Jefe de Hogar**—Se designa a una persona en cada hogar como el “jefe de hogar.” En la mayoría de los casos, ésta es la persona o una de las personas a cuyo nombre se ha comprado o se alquila la vivienda y quien aparece listada en la columna 1 del cuestionario censal. De no haber tal persona en el hogar, cualquier adulto miembro del hogar se puede designar como el “jefe de hogar.”

**Personas en Unidades de Vivienda Ocupadas**—“Personas en unidades de vivienda ocupadas” es la población total menos aquellas personas viviendo en alojamientos de grupo. “Personas por unidad de vivienda ocupada” se computa dividiendo la población viviendo en unidades de vivienda por el número de viviendas ocupadas. Los datos también se presentan separadamente para la población en unidades de vivienda ocupadas por propietarios y para la población en unidades de vivienda ocupadas por inquilinos.

**Año en que el Jefe de Hogar se Mudó a la Unidad**—Los datos presentados para esta partida se basan en la información obtenida para el jefe de hogar y se refieren al año de la última mudanza. Si el jefe de hogar se mudó a una unidad que había ocupado anteriormente, se informó el año de la última mudanza. Si el jefe de hogar se mudó de un apartamento a otro dentro del mismo edificio, se informó el año en que el jefe de hogar se mudó al apartamento actual. El propósito es establecer el año en el cual el jefe de hogar comenzó la ocupación actual. El año en el cual el jefe de hogar se mudó no es necesariamente el mismo año en el cual los demás miembros del hogar se mudaron, aunque en la mayoría de los casos, el hogar completo se mudó a la misma vez. (Véase la pregunta H17 en el Apéndice E, “Facsimiles de las Páginas del Cuestionario.”)

**Unidades de Vivienda Desocupadas**—Una unidad de vivienda está desocupada si nadie vive en ella al momento de la enumeración, a menos que sus ocupantes sólo estén ausentes temporalmente. Unidades ocupadas temporalmente al momento de la enumeración por personas que tienen una residencia habitual en otro lugar también se clasifican como desocupadas.

Las unidades nuevas que aún no han sido ocupadas se clasifican como unidades de vivienda desocupadas si la construcción ha llegado al punto en el cual todas las ventanas y puertas exteriores están instaladas y los pisos están listos para usarse. Las unidades desocupadas se excluyen si están expuestas a los elementos; i.e., el techo, las paredes, las ventanas y/o las puertas no protegen el interior de las inclemencias del tiempo, o si existe evidencia positiva (tal como un letrero en la casa o en el bloque) de que la unidad va a ser demolida o está condenada. También se excluyen alojamientos utilizados en su totalidad para propósitos no residenciales tales como una tienda o una oficina, o alojamientos utilizados para el almacenaje de suministros o inventarios de negocios, maquinaria o productos agrícolas.

**Tipo de Unidad Desocupada**—Las unidades de vivienda desocupadas se clasifican en este informe como “Estacionales” o “Para uso todo el año.” Las unidades “Estacionales” son destinadas para ocupación únicamente durante ciertas estaciones del año. Se incluyen unidades destinadas para uso de recreación, tales como cabañas en la playa y casas de veraneo, al igual que las viviendas que se le ofrecen a los veraneantes para la práctica de deportes de verano. Las unidades de vivienda desocupadas “Para uso todo el año,” están disponibles o destinadas para ocupación en cualquier momento del año. Una unidad en un área de recreo que está ocupada usualmente durante todo el año se considera como “Para uso todo el año.” Una unidad que se usa sólo ocasionalmente durante el año también se considera como “Para uso todo el año.”

**Clasificación de la Vacancia**—Los datos sobre “Clasificación de la vacancia” se tabularon de las respuestas a la partida C del cuestionario. (Véase la partida C en el Apéndice E, “Facsimiles de las Páginas del Cuestionario.”) Las unidades desocupadas para uso todo el año se subdividen, según su clasificación de la vacancia, como sigue:

*Para venta únicamente.* Unidades desocupadas para uso todo el año que están disponibles “Para venta únicamente,” incluyendo las unidades individuales en proyectos de cooperativas y de condominios si éstas se ofrecen “Para venta únicamente.”

*Para alquiler.* Unidades desocupadas para uso todo el año que se ofrecen “Para alquiler,” y unidades desocupadas que se ofrecen para alquiler o para la venta.

*Otras vacantes.* En este informe, si una unidad desocupada para uso todo el año no está “Para venta únicamente” o “Para alquiler,” se clasifica en la categoría, “Otras vacantes.” Esta categoría incluye las unidades que se mantienen desocupadas hasta que se resuelva un caso de herencia, unidades reservadas para ser ocupadas por un guardián o conserje y unidades retenidas por razones personales del dueño, así como unidades alquiladas o vendidas pero que están pendientes de ocupación y unidades retenidas para uso ocasional.

**Duración de la Vacancia**—Las estadísticas sobre duración de la vacancia se refieren al tiempo transcurrido (en meses) entre la fecha en que los últimos ocupantes se mudaron de la unidad hasta la fecha de la enumeración. (Véase la partida D en el Apéndice E, “Facsimiles de las Páginas del Cuestionario.”) Los datos, por lo tanto, no proporcionan una medida directa del tiempo total que las unidades permanecen desocupadas. Para unidades construidas recientemente que nunca han sido ocupadas, la duración de la vacancia se cuenta a partir de la fecha en que se completó la construcción. Para unidades convertidas o consolidadas recientemente, el tiempo se informa a partir de la fecha en que se completó la conversión o consolidación.

**Tenencia**—Una unidad de vivienda se clasifica como “Ocupada por propietario” si el dueño o condueño ocupa la unidad, aún cuando ésta esté hipotecada o no se haya pagado en su totalidad. Todas las demás unidades ocupadas se clasifican como “Ocupadas por inquilinos,” incluyendo unidades alquiladas por pago de alquiler en efectivo y aquellas unidades ocupadas sin pago de alquiler en efectivo. (Véase la pregunta H7 en el Apéndice E, “Facsimiles de las Páginas del Cuestionario.”)

## CARACTERÍSTICAS DE LA UTILIZACIÓN

**Personas**—Se incluyen todas las personas que ocupan la unidad de vivienda. Entre

ellas están no sólo los ocupantes emparentados con el jefe de hogar sino también cualesquiera inquilinos, huéspedes, pupilos, compañeros de cuarto, menores bajo tutela, hijos de crianza y empleados residentes que comparten el alojamiento con el jefe de hogar. Los datos sobre "Personas en la unidad" presentan el número de unidades ocupadas por el número especificado de personas.

**Cuartos**—Las estadísticas sobre "Cuartos" se presentan en términos del número de unidades de vivienda con un número especificado de cuartos. (Véase la pregunta H6 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.") La intención de esta pregunta es el contar el número de cuartos completos utilizados para propósitos de vivienda. Para cada unidad, éstos incluyen salas, comedores, cocinas, dormitorios, cuartos de recreación terminados y cuartos de huéspedes. Se excluyen facilidades de cocina que ocupan una sección dentro de otro cuarto, cuartos de baño, balcones, pasillos, lavanderías y cualquier otro espacio no terminado utilizado para almacenaje. Un cuarto parcialmente dividido se considera un cuarto separado sólo si hay un tabique desde el piso hasta el techo.

**Personas por Cuarto**—"Personas por cuarto" es una medida derivada que se obtiene dividiendo el número de personas en cada unidad de vivienda ocupada por el número de cuartos en la unidad. Por lo tanto, las cifras presentadas se refieren al número de unidades de vivienda ocupadas que tienen la razón especificada de personas por cuarto.

**Dormitorios**—El número de "Dormitorios" en la unidad es el recuento de los cuartos utilizados principalmente para dormir, aún cuando también se utilicen para otros propósitos. Cuartos reservados para dormir, tales como dormitorios de huéspedes, se cuentan como dormitorios aunque se utilicen con poca frecuencia. Por otra parte, cuartos utilizados principalmente para otros propósitos, tales como una sala con un sofá cama, no se consideran dormitorios aunque también se utilicen para dormir. Una unidad de vivienda que consiste de un solo cuarto, tal como un apartamento estudio con facilidades de cocina, se clasifica, por definición, como que no tiene dormitorio. (Véase la pregunta H23 en el

Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

### CARACTERÍSTICAS ESTRUCTURALES

**Año en que se Construyó la Estructura**—El "Año en que se construyó la estructura" se refiere al año en el cual se construyó el edificio, no cuando fue remodelado, ampliado o convertido. En el caso de una casa flotante, casa móvil, o remolque, el año de manufactura del modelo se asume que es el año en que se construyó. Las cifras que se presentan en este informe se refieren al número de unidades en estructuras construídas durante los periodos especificados, y existentes al momento de la enumeración. (Véase la pregunta H16 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Unidades en la Estructura**—Una estructura es un edificio separado que o tiene espacio abierto por todos sus lados o está separado de otras estructuras por paredes divisorias que se extienden desde el piso hasta el techo. En la determinación del número de unidades en una estructura todas las unidades de vivienda, tanto las ocupadas como las desocupadas fueron contadas. Se presentan estadísticas para el número de unidades de vivienda en estructuras del tipo y tamaño especificado, no para el número de edificios residenciales. Estructuras que contienen sólo una unidad de vivienda se clasifican, además, como separadas o unidas.

La categoría, "Casa móvil o remolque, etc.," incluye casas móviles, remolques, botes, tiendas de campaña, camiones cubiertos (vans), etc. (Véase la pregunta H9 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Tipo de Construcción**—Las unidades de vivienda se clasifican según la construcción de la parte principal de la estructura. Paredes de mampostería se refiere a paredes fabricadas de concreto armado, bloques de concreto u ornamentales, piedra, ladrillos u otro material de mampostería. Las unidades en estructuras cuyas paredes son de mampostería se clasifican según el tipo de techo sobre la mayor parte de la estructura: (1) un "Techo de concreto" o (2) un "Techo de madera." Un techo de concreto puede estar cubierto por un material para techos impermeable. Un techo de

madera puede estar cubierto por planchas de metal, madera con tejas de asfalto, u otros materiales.

En unidades con paredes de madera, el material de soporte básico de las paredes exteriores es madera, la cual puede estar cubierta con tablas de madera, madera terciada u otros materiales. Los "Cimientos de mampostería" son, con más frecuencia, de concreto armado o de bloques de concreto; pueden ser de piedra u otro material de mampostería; o postes o columnas de concreto. Los "Cimientos de pilotes de madera" comúnmente consisten de postes de madera. "Paredes de mampostería y madera" se refiere a las paredes exteriores construídas con mampostería y madera.

"Otro tipo de construcción" es cualquier otro tipo de construcción no descrito anteriormente. Incluye unidades de construcción provisional y edificios de una combinación de varios tipos de construcción. (Véase la pregunta H29 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Condición de la Unidad de Vivienda**—Esta partida sirve como un indicador de la calidad de la vivienda. Las respuestas a esta pregunta indican cuantos alojamientos puede que no proporcionen albergue adecuado y, en su presente condición, sean una amenaza a la salud, seguridad o bienestar de sus ocupantes.

Los enumeradores asignaron la clasificación de la condición mediante la observación a base de instrucciones sobre la extensión, grado y tipo de defectos visibles. Los criterios trataron principalmente con la protección que la unidad brinda contra las inclemencias del tiempo, extensión de áreas en mal estado, riesgo a la seguridad física de los ocupantes, y construcción inadecuada o provisional. Defectos que se revelarían sólo mediante una inspección más detallada que la posible durante un censo, o que se reconocerían sólo por una persona con conocimiento bastante detallado de construcción, no se incluyeron en los estándares mediante los cuales se clasificó la condición.

A los enumeradores se les instruyó que juzgaran cada unidad a base de sus propias características físicas, sin tomar en consideración el vecindario, lo atractivo o sombrío de la unidad, el grado de hacinamiento, el grado de limpieza de la unidad

u otras consideraciones no relacionadas a la condición física.

Todos los alojamientos se clasificaron como de construcción original adecuada o inadecuada. Un alojamiento se considera que es de "construcción original adecuada" si se construyó inicialmente con materiales tradicionales (madera, concreto armado, etc.), y no tenía deficiencias estructurales significativas o no ponía en peligro la seguridad de los ocupantes. Los alojamientos clasificados como de una construcción original adecuada se clasificaron, además, como de una condición buena, deteriorándose o dilapidada.

Una vivienda "buena" se definió como aquella sin defectos o sólo con defectos leves de un tipo normalmente corregido en el curso del mantenimiento regular. Estos defectos no afectan la protección que brinda la unidad contra las inclemencias del tiempo ni tampoco ponen en peligro la seguridad o salud de los ocupantes. Ejemplos de estos son: daños leves a las puertas o persianas; un techo moderadamente enmohecido; deterioro ligero de los pisos, los umbrales, los dinteles de las puertas, antepecho o marcos de las ventanas, pequeñas grietas en las paredes y falta de pintura.

Una vivienda "deteriorándose" tiene defectos intermedios que necesitan reparaciones más allá del alcance del mantenimiento regular. Los defectos intermedios indican la necesidad de que se repare la vivienda si la misma ha de seguir ofreciendo seguridad y albergue adecuado. Ejemplos incluyen material podrido, roto, o que falta en pequeñas áreas de las paredes o del techo; escalones o balcones podridos o inestables; pisos, marcos de puertas o escaleras excesivamente gastadas; techos muy enmohecidos o con filtraciones; y persianas o puertas sueltas o rotas.

Una unidad "dilapidada" ya no proporciona albergue seguro y adecuado. Tiene uno o más defectos críticos, tales como material roto o que falta sobre un área extensa de los cimientos, paredes exteriores, techo, pisos, etc.; techo, paredes o pisos hundidos o desnivelados; daño extenso causado por polilla; o tiene un gran número de defectos intermedios.

"Construcción original inadecuada" se aplica a unidades construidas mayormente de materiales provisionales o de desecho (pedazos de madera, chatarra, cajas de empaque, etc.), o unidades sin ci-

mientos y paredes que descansan directamente sobre el terreno, o que tienen pisos de tierra. El término también se aplica a chozas, casuchas, cobertizos, tiendas de campaña y edificios similares que no son apropiados para uso residencial, pero que se utilizan como un lugar de residencia. (Véase la pregunta H30 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

### CARACTERÍSTICAS DE LAS FACILIDADES SANITARIAS

**Facilidades Sanitarias**—La categoría, "Todas las facilidades sanitarias para uso exclusivo" consiste de unidades que tienen agua por tuberías (ya sea fría y caliente, o fría únicamente), un inodoro y una bañera o ducha dentro del edificio para el uso exclusivo de los ocupantes de la unidad. "Sin alguna o todas las facilidades sanitarias para uso exclusivo" incluye aquellas condiciones en las cuales (1) todas las tres facilidades sanitarias especificadas están presentes dentro del edificio, pero son utilizadas por otro hogar; (2) algunas, pero no todas las facilidades están presentes; o (3) ninguna de las tres facilidades sanitarias está presente. (Véase la pregunta H5 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Comparabilidad con los Datos del Censo de 1970 Sobre Facilidades Sanitarias**—En Puerto Rico, tanto en el 1970 como en el 1980, se hicieron preguntas separadas sobre la presencia de agua caliente y fría por tuberías, una bañera o ducha, y un inodoro. Para el 1980, al igual que en el 1970, las tabulaciones sobre facilidades sanitarias completas requerían que las facilidades estuvieran dentro del mismo edificio que la unidad que está siendo enumerada. Además, para el 1980, si la unidad no tenía un inodoro, se le pidió a los respondedores que identificaran sus facilidades sanitarias de la manera siguiente: letrina, otra o ninguna. En el 1970, sólo a una muestra de las unidades se le pidió que proporcionara esa información.

**Cuartos de Baño**—Un cuarto de baño completo es un cuarto con un inodoro, una bañera o ducha, y un lavamanos con agua caliente y fría, o sólo fría, por tuberías, para el uso exclusivo de los ocupantes de la unidad de vivienda. Un

medio cuarto de baño tiene por lo menos un inodoro o una bañera o ducha para uso exclusivo, pero no tiene todas las facilidades de un cuarto de baño completo. El equipo tiene que estar dentro del mismo edificio que la unidad que está siendo enumerada. La categoría, "Ninguno," consiste de unidades sin facilidades de un cuarto de baño y aquellas con facilidades de un cuarto de baño que también son para el uso de los ocupantes de otras unidades de vivienda. (Véase la pregunta H24 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Abastecimiento de Agua**—Las unidades de vivienda pueden recibir su abastecimiento de agua de varias fuentes. Una fuente común que abastece agua a seis o más unidades se clasifica como un "Acueducto público." En la gran mayoría de los casos en Puerto Rico, la Autoridad de Acueductos y Alcantarillados de Puerto Rico proporciona el agua, pero también se puede obtener de un pozo que le proporciona agua a seis o más unidades de vivienda. Si el agua se obtiene de un pozo que suple a cinco o menos unidades de vivienda, dichas unidades se clasifican como que reciben el agua de un "Pozo privado." Una fuente de abastecimiento de agua puede ser un "Aljibe, tanques o drones" en los cuales se recoge el agua de lluvia. La categoría, "Manantial u otra fuente," incluye agua obtenida de manantiales, arroyos, ríos, lagos, canales de riego, etc. (Véase la pregunta H14 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Disposición de Aguas Negras**—Las unidades de vivienda están o conectadas a un alcantarillado público, o a un pozo séptico o pozo negro, o disponen de las aguas negras por otros medios. En Puerto Rico, un alcantarillado público es parte del sistema de la Autoridad de Acueductos y Alcantarillados de Puerto Rico. Una unidad de vivienda se considera conectada a un pozo séptico o pozo negro cuando la unidad tiene un foso o tanque subterráneo para la disposición de las aguas negras. La categoría, "Otros medios," incluye unidades de vivienda que disponen de las aguas negras de alguna otra manera. (Véase la pregunta H15 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

## EQUIPO Y COMBUSTIBLES

**Alumbrado Eléctrico**—Una unidad de vivienda se clasifica como que tiene alumbrado eléctrico si está alambrada para dicho alumbrado, aún cuando al momento de la enumeración la corriente esté desconectada porque la unidad está desocupada o no se han pagado las facturas por consumo de electricidad. (Véase la pregunta H18 en el Apéndice E, "Facsímiles de las Páginas del Cuestionario.")

**Facilidades de Cocina**—Una unidad tiene facilidades de cocina completas si tiene todo lo siguiente: (1) un fregadero instalado con agua por tuberías, (2) una cocina o estufa, y (3) una nevera mecánica. Todas las facilidades de cocina deben estar localizadas en la estructura, pero no tienen que estar en el mismo cuarto. Los alojamientos que sólo tienen equipo de cocina portátil no se consideran como que tienen una cocina o estufa. Una nevera de hielo no se considera que es una nevera mecánica. (Véase la pregunta H22 en el Apéndice E, "Facsímiles de las Páginas del Cuestionario.")

**Aire Acondicionado**—"Aire acondicionado" se define como el enfriamiento del aire mediante una unidad de refrigeración. No se incluyen refrigeradores por evaporación, abanicos, o ventiladores que no están conectados a una unidad de refrigeración; pero se incluyen las bombas térmicas (heat pumps). Un sistema central es una instalación que enfría el aire de un número de cuartos. En un edificio de apartamentos, tal sistema podría enfriar todos los apartamentos en el edificio, cada apartamento podría tener su propio sistema central, o pueden haber varios sistemas, cada uno proporcionando aire acondicionado central a un grupo de apartamentos. Un sistema con controles individuales en cada cuarto es un sistema central. Una unidad individual para un cuarto es un acondicionador de aire individual que se instala en una ventana o pared exterior y generalmente se utiliza para enfriar un cuarto, aunque en ocasiones se puede utilizar para enfriar más de un cuarto. (Véase la pregunta H26 en el Apéndice E, "Facsímiles de las Páginas del Cuestionario.")

**Vehículos Disponibles**—Los datos para esta partida se refieren al número de hogares que tienen vehículos dis-

ponibles en el hogar para el uso de los miembros del hogar. Incluidos en esta partida están los automóviles de pasajeros, camionetas, camionetas de reparto de capacidad de una tonelada o menos, al igual que guagüitas ("station wagons"), automóviles propiedad de una compañía, y taxis mantenidos en el hogar para uso de los miembros del hogar. Los automóviles alquilados por 1 mes o más; los automóviles de la policía y del gobierno que se mantienen en el hogar; y camiones cubiertos (vans) y camiones descubiertos (trucks) de capacidad de una tonelada o menos, propiedad de una compañía, también se incluyen si se mantienen en el hogar y se utilizan para propósitos no relacionados a la ocupación o negocio. Se excluyen los carros desmantelados, los carros inmóviles utilizados como fuente de energía para alguna pieza de maquinaria, y los camiones cubiertos (vans) y camiones descubiertos (trucks) que se mantienen en el hogar pero se usan sólo para propósitos de negocio. Las estadísticas no reflejan el número de vehículos que son propiedad privada o el número de hogares que poseen vehículos. (Véase las preguntas H27 y H28 en el Apéndice E, "Facsímiles de las Páginas del Cuestionario.")

En este informe, tablas seleccionadas presentan el número de hogares con automóviles disponibles separadamente del número de hogares con camiones descubiertos (trucks) o camiones cubiertos (vans). Las cifras no suman al número total de vehículos disponibles porque un hogar se puede contar en ambas categorías. Por ejemplo, un hogar puede tener un automóvil además de un camión cubierto (van) o descubierto (truck) disponible para el uso de los miembros del hogar y, así, ser incluido en el recuento de hogares con automóviles disponibles y en el recuento de hogares con camiones cubiertos (vans) o descubiertos (trucks) disponibles.

**Comparabilidad con los Datos del Censo de 1970 Sobre Automóviles Disponibles**—En 1970, se obtuvieron datos sólo sobre el número de hogares con automóviles que eran propiedad de, o usados regularmente por los miembros del hogar. No se contaron los taxis, camionetas o camiones descubiertos (trucks) grandes. En 1980, los datos sobre automóviles disponibles incluyen taxis, si se mantienen en el hogar para el uso de los miembros

del hogar, pero se excluyen las camionetas o los camiones descubiertos (trucks) grandes. En 1980 se obtuvieron datos separados sobre el número de hogares con camiones cubiertos (vans) o camiones descubiertos (trucks) de capacidad de una tonelada o menos que se mantienen en el hogar para uso de los miembros del hogar.

**Teléfono en la Unidad de Vivienda**—Una unidad se clasifica como que tiene teléfono si hay un teléfono en el alojamiento. Unidades en las cuales el respondedor utiliza un teléfono localizado dentro del edificio pero no dentro del alojamiento del respondedor, se clasifican como que no tienen teléfono. (Véase la pregunta H25 en el Apéndice E, "Facsímiles de las Páginas del Cuestionario.")

**Comparabilidad con los Datos del Censo de 1970 Sobre Teléfono Disponible**—En 1970, la contestación a la pregunta sobre disponibilidad de un teléfono se recopiló en una base de 100 por ciento. Una unidad de vivienda se clasificó como que tenía teléfono si el hogar tenía un teléfono al cual se le podía llamar, aunque estuviera en otra unidad, en un pasillo común, en otro edificio, o se compartiera con otro hogar. En 1980, para que una unidad de vivienda se clasificara como que tenía un teléfono, el teléfono tenía que estar dentro del alojamiento del respondedor.

**Energía Utilizada por Calentador de Agua Tipo Tanque**—Los datos que se presentan para esta partida se refieren al tipo principal de energía utilizada por un calentador de agua tipo tanque. Las categorías, para los tipos de energía utilizada son: (1) "Electricidad;" (2) "Energía solar," si la fuente principal de energía es un sistema que utiliza la energía disponible en la luz del sol para adquirir y almacenar calor; o (3) "Otros combustibles," tales como gas, aceite combustible, etc. La categoría, "Sin calentador de agua tipo tanque," incluye unidades de vivienda que no tienen un calentador de agua tipo tanque, unidades en edificios sin agua caliente por tuberías, unidades que tienen agua caliente proporcionada por un aditamento eléctrico conectado al grifo del agua en un fregadero o un aditamento eléctrico conectado a una ducha, y unidades en edificios sin agua por tuberías.

(Véase la pregunta H19 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Combustibles Utilizados para Cocinar**—"Gas por tuberías subterráneas" es gas que pasa por tuberías subterráneas de un sistema central que supe el gas a la comunidad. "Gas en cilindros, tanques o petróleo líquido" es gas que se almacena en tanques o botellas, que se llenan o se cambian cuando se vacían. La categoría, "Otro," incluye aceite combustible, queroseno, gasolina, alcohol, carbón vegetal, leña, así como polvo de hulla y briquetas de carbón, etc. (Véase la pregunta H20 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

### CARACTERÍSTICAS FINANCIERAS

**Valor**—Valor es la estimación que hace el respondedor sobre la cantidad por la cual la propiedad (casa y solar) se vendería, si estuviera a la venta. (Véase la pregunta H11 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

Las estadísticas sobre valor se presentan para unidades de vivienda "Especificadas, ocupadas por propietarios." Estas unidades de vivienda "especificadas" sólo incluyen casas de una familia en solares de menos de 3 cuerdas (una cuerda es aproximadamente 0.97 acres) sin un establecimiento comercial u oficina médica en la propiedad. Los datos excluyen las unidades de vivienda en condominio ocupadas por propietarios, casas móviles, remolques, botes, tiendas de campaña o camiones cubiertos (vans) ocupados como residencia habitual, al igual que unidades no en condominio ocupadas por propietarios en edificios multifamiliares. Los universos para unidades de vivienda "Especificadas, ocupadas por propietarios" son los mismos para las tabulaciones sobre valor y para las tabulaciones sobre estado hipotecario y gastos mensuales seleccionados del propietario.

**Estado Hipotecario y Gastos Mensuales Seleccionados del Propietario**—Los datos se presentan para unidades de vivienda "Especificadas, ocupadas por propietarios." Estas unidades de vivienda "especificadas" sólo incluyen casas de una sola familia localizadas en solares de menos

de 3 cuerdas (una cuerda es aproximadamente 0.97 acres) sin un establecimiento comercial u oficina médica en la propiedad. Los datos excluyen unidades de vivienda en condominio ocupadas por propietarios, casas móviles, remolques, botes, tiendas de campaña o camiones cubiertos (vans) ocupados como residencia habitual; al igual que unidades no en condominio, ocupadas por propietarios en edificios multifamiliares. Se presentan distribuciones separadas para unidades "Hipotecadas" y para unidades "No hipotecadas." La cifras de gastos mensuales seleccionados del propietario es la suma de los pagos de hipotecas, escrituras de fideicomiso, o deudas similares sobre la propiedad; impuestos sobre bienes raíces; seguros contra incendios y riesgos en la propiedad; costos por servicios públicos (electricidad, gas y agua); y combustibles (aceite combustible, carbón vegetal, queroseno, leña, etc.) (Véase las preguntas H33, H34 y H35 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Alquiler**—Este informe presenta estadísticas sobre alquiler para unidades de vivienda "Especificadas ocupadas por inquilinos," que incluyen unidades de vivienda ocupadas por inquilinos excepto casas de una sola familia localizadas en solares de 3 o más cuerdas (una cuerda es aproximadamente 0.97 acres). Se le pidió a los respondedores que informaran el alquiler sólo para la unidad de vivienda enumerada y que excluyeran cualquier alquiler pagado por unidades adicionales o por locales de negocios.

**Alquiler Contractual.** En este informe, sólo se presenta el alquiler contractual mediano para unidades de vivienda especificadas, ocupadas por inquilinos en áreas rurales. Alquiler contractual es el alquiler mensual que se ha acordado pagar, o que se ha estipulado en un contrato, sin tomar en consideración el mobiliario, costos por servicios públicos, o servicios que puedan estar incluidos. (Véase la pregunta H12 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Alquiler Bruto.** El alquiler computado conocido como "Alquiler bruto" es el alquiler contractual más el costo promedio mensual estimado de servicios públicos (electricidad, gas y agua) y

combustibles (aceite combustible, carbón vegetal, queroseno, leña, etc.) si estos gastos los paga el inquilino (o los paga alguna otra persona para el inquilino) además del alquiler. El alquiler bruto se utiliza con la intención de eliminar los diferenciales que resultan de prácticas variables con respecto a la inclusión de servicios públicos y combustibles como parte del pago de alquiler. El costo estimado de los combustibles se informa en términos de costo anual pero se convierte a una cifra mensual durante el procedimiento de cómputo. Unidades de inquilinos que ocupan la unidad sin pago de alquiler en efectivo se presentan separadamente en las tabulaciones en la categoría, "Sin pago de alquiler en efectivo." (Véase las preguntas H12 y H21 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Tenencia del Solar**—Esta partida se tabula para unidades de vivienda ocupadas por propietarios, según la tenencia del solar en el cual está situada la unidad. "Solar propio" es cuando el propietario de la unidad de vivienda es también el propietario del solar o lo está comprando aunque no se haya pagado en su totalidad. "Solar alquilado" es cuando el dueño de la unidad paga o ha acordado pagar alguna cantidad de dinero por el uso del solar. "Solar sin pago de alquiler" es cuando el solar no es propiedad de, ni está siendo comprado por el dueño de la unidad y no se ha contratado o acordado el pago de dinero por el alquiler del solar. El dueño de la unidad de vivienda puede tener uso autorizado o no autorizado del solar. (Véase la pregunta H31 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Alquiler Mensual del Solar**—Esta partida se tabuló para unidades de vivienda ocupadas por propietarios en solares alquilados. (Véase la pregunta H32 en el Apéndice E, "Facsimiles de las Páginas del Cuestionario.")

**Ingreso en 1979**—En este informe, sólo se presentan datos sobre el ingreso mediano de los hogares. El ingreso mediano es la cantidad que divide la distribución en dos grupos iguales, uno con ingresos sobre la mediana y el otro con ingresos por debajo de la mediana. El ingreso mediano se basa en la distribución

del número total de hogares, incluyendo aquellos sin ingreso. En este informe, todas las cifras de ingreso mediano se calculan utilizando la interpolación lineal. En otros informes del censo de 1980 para Puerto Rico las cifras de ingreso mediano de \$20,000 o menos generalmente se calculan utilizando la interpolación lineal; todas las demás cantidades de ingreso mediano se derivan mediante la interpolación de Pareto.

Los datos sobre ingreso en 1979 se derivaron de las respuestas a las preguntas 32 y 33. Se solicitó información sobre ingreso monetario recibido durante el año calendario 1979 de todas las personas de 15 años o más de edad. "Ingreso total" es la suma algebraica de las cantidades informadas separadamente como ingreso de jornales y salarios; ingreso neto de empleo propio no agrícola; ingreso neto de empleo propio agrícola; intereses, dividendos, ingreso neto de alquileres o regalías; ingreso del Seguro Social o Retiro del Ferrocarril; ingreso de asistencia o bienestar público; y todo otro ingreso. Las cifras representan la cantidad del ingreso recibido regularmente antes de las deducciones por contribuciones sobre ingreso personal, Seguro Social, compra de bonos, cuotas de unión y deducciones por "medicare," etc.

Cantidades recibidas de las siguientes fuentes no se incluyen como ingreso: dinero recibido de la venta de propiedades (a menos que la persona se dedicara al negocio de venta de tales propiedades); el valor de ingreso "en especie" de fuentes tales como cupones para alimentos, subsidios para vivienda pública, cuidado médico, aportaciones hechas por

patronos a los fondos de pensiones, etc.; retiro de depósitos bancarios; préstamos; reembolsos de impuestos; intercambio de dinero entre parientes que viven en el mismo hogar; regalos y herencias de sumas globales, pagos de pólizas de seguros u otros tipos de ingresos de sumas globales.

Aunque las estadísticas sobre ingresos se refieren al año calendario 1979, las características de las personas y la composición de los hogares y familias se refieren al momento de la enumeración (lro de abril de 1980). Sin embargo, la composición de la mayoría de las familias durante el 1979 era la misma que en abril de 1980.

Pueden haber diferencias entre los datos sobre ingreso del hogar en 1979 en este informe y datos similares presentados en el informe PHC80-3, *Resumen de las Características para Unidades Gubernamentales y Áreas Estadísticas Metropolitanas Estándares*. Cualesquiera diferencias son el resultado de errores corregidos después de la publicación del informe PHC80-3.

**Comparabilidad con los Datos del Censo de 1970 Sobre Ingreso**—En 1970, las estadísticas sobre ingreso se referían al ingreso de la familia o del individuo primario que ocupaba la unidad de vivienda; esto es, la suma de los ingresos del jefe de familia y de todos los demás miembros de la familia de 14 o más años de edad, o el ingreso del individuo primario. El ingreso de las personas que vivían en la unidad pero que no estaban emparentadas con el jefe de hogar no se incluyó. En 1980, las estadísticas sobre ingreso se refieren al ingreso del hogar; esto es, la suma de los ingresos de todas las personas de 15 o más

años de edad que ocupaban la unidad, incluyendo personas no emparentadas al jefe de hogar.

Una discusión sobre la comparabilidad con los datos sobre ingreso publicados en otras fuentes, incluyendo censos anteriores, puede obtenerse en el informe del Censo de Población de 1980, *Características Sociales y Económicas Generales*, PC80-1-C.

**Condición de Pobreza en 1979**—Los hogares se clasifican por debajo del nivel de pobreza cuando el ingreso total de la familia o del jefe de hogar no en familia para 1979 está por debajo del umbral de pobreza apropiado. El ingreso de personas viviendo en el hogar, quienes no están emparentadas con el jefe de hogar, no se considera al determinar la condición de pobreza de un hogar. Los umbrales de pobreza varían según el tamaño de la familia, número de hijos y edad del jefe de hogar o individuo no emparentado. Los umbrales de pobreza utilizados en el censo de 1980 varían ligeramente de aquellos utilizados en el censo de 1970, que tomaron en consideración los mismos tres factores al igual que el sexo del jefe de hogar en familia o individuo no emparentado y residencia en finca o no en finca. Además, para el censo de 1980, los umbrales por tamaño de familia se extendieron de 7 o más personas a 9 o más personas. Los límites de ingreso se ponen al día todos los años para reflejar el cambio en el Índice de Precios al Consumidor. Una explicación más detallada de la definición de pobreza se puede encontrar en el informe del Censo de Población de 1980, *Características Sociales y Económicas Generales*, PC80-1-C.

PROCEDIMIENTOS PARA LA RECOPIACIÓN DE DATOS...	C-2
PROCEDIMIENTOS PARA LA ELABORACIÓN DE DATOS...	C-2

LUGAR HABITUAL DE RESIDENCIA

De acuerdo con los procedimientos censales que se originaron con el primer censo de los Estados Unidos en el 1790, cada persona enumerada en el censo de 1980 se contó como habitante de su "lugar habitual de residencia," que generalmente significa aquel lugar en el cual la persona vive y duerme la mayor parte del tiempo. Este lugar no es necesariamente el mismo que la residencia legal de la persona ni su residencia para efectos electorales. Sin embargo, en la gran mayoría de los casos, el uso de estas diferentes bases de clasificación produciría substancialmente las mismas estadísticas, aunque podrían haber diferencias apreciables para algunas áreas.

La implementación de esta práctica ha resultado en el establecimiento de reglas de residencia para ciertas categorías de personas cuyo lugar habitual de residencia no es inmediatamente aparente. Además, esta práctica significa que las personas no siempre fueron contadas como residentes del lugar en el cual se estaban quedando el Día del

Censo (1ro de abril). Las personas sin un lugar habitual de residencia, sin embargo, se contaron en el lugar donde se encontraban.

Fuerzas Armadas de los Estados Unidos

Los miembros de las Fuerzas Armadas de los Estados Unidos que vivían en una instalación militar se contaron, al igual que en todos los censos anteriores, como residentes del área en la cual estaba localizada dicha instalación; los miembros de las Fuerzas Armadas de los Estados Unidos que no vivían en una instalación militar se contaron como residentes de las áreas en las cuales vivían. Personas en familias con miembros en las Fuerzas Armadas de los Estados Unidos se contaron donde estaban viviendo el Día del Censo (i.e., la instalación militar o "fuera de la base," según fuera el caso).

Cada barco de la Marina se atribuyó a la localización que el Departamento de la Marina de Guerra de los Estados Unidos designó como su puerto de origen, excepto aquellos barcos que estaban desplegados a la 6ta o 7ma Flota el Día del Censo. El personal naval a bordo de barcos desplegados se definió como parte de la población de ultramar en el censo de 1980, ya que la designación a la 6ta o 7ma Flota implica una asignación en ultramar por un largo periodo.

En puertos de origen donde el personal naval asignado a barcos era menos de 1,000, la tripulación se contó a bordo del barco. En puertos de origen cuyo personal naval asignado a barcos era de 1,000 o más, el personal que indicó que tenía un lugar habitual de residencia dentro de 50 millas del puerto de origen del barco se atribuyó a esa residencia.

Cuando un puerto de origen designado por el Departamento de la Marina de

Guerra de los Estados Unidos quedaba en más de una entidad geográfica, los barcos anclados allí el Día del Censo se asignaron por el Negociado del Censo a la entidad en la cual estaba localizado el terreno inmediatamente adyacente al muelle o desembarcadero. Otros barcos atribuidos por la Marina de Guerra a ese puerto de origen pero que no estaban físicamente presentes y no estaban desplegados a la 6ta o 7ma Flota el Día del Censo, se atribuyeron a la localidad que aparecía en la lista de puertos de origen de la Marina de Guerra.

Tripulaciones de Barcos de la Marina Mercante

Se enviaron "Shipboard Census Reports" a las tripulaciones de barcos de la Marina Mercante de los Estados Unidos a través de sus dueños u operadores, basándose en listas de la Marina Mercante de los Estados Unidos obtenidas de la Administración Marítima del Departamento de Comercio de los Estados Unidos.

Si el barco estaba anclado en un puerto de los Estados Unidos, incluyendo a Puerto Rico, el Día del Censo, la tripulación fue enumerada como de ese puerto. Si el barco no estaba anclado en un puerto de los Estados Unidos pero estaba dentro de las aguas territoriales de los Estados Unidos, la tripulación fue enumerada como de (a) el puerto de destino, si ese puerto quedaba dentro de los Estados Unidos, incluyendo a Puerto Rico, o (b) el puerto de origen del barco, incluyendo a Puerto Rico, si su puerto de destino quedaba fuera de los Estados Unidos.

Tripulaciones de barcos de los Estados Unidos que se encontraban fuera de las aguas territoriales de los Estados Unidos el Día del Censo y tripulaciones de barcos con bandera extranjera no fueron enumeradas en el Censo de 1980.

### Personas Fuera del Hogar en Escuelas

Los estudiantes universitarios se contaron como residentes del área en la cual estaban viviendo mientras asistían a la universidad, al igual que se ha hecho desde 1950. Sin embargo, niños en escuelas de internos por debajo del nivel universitario se contaron en el hogar de sus padres.

### Personas en Instituciones

Personas internas en instituciones, quienes ordinariamente viven allí por periodos de tiempo considerables, se contaron como residentes del área en la cual la institución estaba localizada. Pacientes en salas (generales, de maternidad, etc.) de hospitales en las cuales éstos permanecen cortos periodos de tiempo se contaron en su lugar habitual de residencia; si no tenían un lugar habitual de residencia, se contaron en el hospital.

### Personas Fuera de su Residencia el Día del Censo

A las personas que se encontraban en hoteles, moteles, etc., durante la noche del 31 de marzo de 1980, se les pidió que llenaran un formulario censal para adjudicar su información censal a sus hogares si éstas indicaron que no había nadie en sus casas que pudiera dar la información al censo. Un procedimiento similar se utilizó para personas que estaban de visita en residencias privadas, al igual que para personas que salieron de Puerto Rico durante marzo de 1980 mediante líneas aéreas o navieras intercontinentales para viajar temporalmente en el extranjero. Además, la información sobre personas que estaban fuera de su lugar habitual de residencia se obtuvo de otros miembros de sus familias, administradores de edificios, vecinos etc. Si todos los miembros de una familia iban a estar fuera durante el periodo total de enumeración, la información sobre ese hogar se obtuvo de los vecinos. Se utilizó un procedimiento de pareo para eliminar informes duplicados de personas que habían llenado el cuestionario ellos mismos mientras estaban fuera de su lugar habitual de residencia y quienes a la vez fueron informados en su residencia habitual por otra persona.

Durante la noche del 8 de abril de 1980, se llevó a cabo una enumeración especial en facilidades tales como misiones, cárceles, centros de detención, etc., y las personas allí enumeradas se contaron como residentes del área en la cual el establecimiento estaba localizado.

### Residentes en el Extranjero

Residentes de Puerto Rico que se encontraban en el extranjero por un periodo de tiempo extenso (en las Fuerzas Armadas de los E.U., trabajando como empleados civiles, estudiando en universidades, etc.) no fueron incluidos en la población de Puerto Rico. Por otro lado, residentes de Puerto Rico que se encontraban temporalmente en el extranjero de vacaciones, en viajes de negocios u otros propósitos semejantes, se contaron en su lugar habitual de residencia en Puerto Rico.

### Ciudadanos de Otros Países

Ciudadanos de otros países con residencia habitual (legal o ilegal) en Puerto Rico el Día del Censo, incluyendo aquéllos que estaban trabajando aquí o asistiendo a la escuela (pero que no vivían en una cancellería o consulado) fueron incluidos en la enumeración, al igual que miembros de sus familias viviendo con ellos. Sin embargo, ciudadanos de otros países visitando o viajando temporalmente en Puerto Rico o viviendo en los predios de una cancellería o consulado no fueron enumerados en el censo de 1980.

### PROCEDIMIENTOS PARA LA RECOPIACIÓN DE DATOS

El Censo de Puerto Rico de 1980 se llevó a cabo mediante una combinación de autoenumeración y entrevista personal. Varios días antes del Día del Censo, el 1ro de abril de 1980, en áreas con servicio de entrega postal, el cartero repartió a cada unidad de vivienda en su ruta de entrega un cuestionario anticipado del censo que contenía información explicativa y las mismas preguntas que el cuestionario corto. Se solicitó que el jefe de hogar completara el cuestionario y se lo entregara al enumerador cuando él o ella visitara el hogar. Cuestionarios incompletos, inconsistentes o sin llenar

se completaron mediante entrevista durante la visita del enumerador. En áreas donde no había servicio de entrega postal, los cuestionarios estaban disponibles en aquellos lugares donde las personas recogían su correspondencia. Todas las unidades de vivienda se enumeraron mediante entrevista personal. La información sobre unidades de vivienda desocupadas se obtuvo mediante entrevista personal y observación.

La información para cada unidad de vivienda en Puerto Rico se obtuvo utilizando una de dos versiones del cuestionario censal: un cuestionario corto que contenía un número limitado de preguntas básicas de población y vivienda o un cuestionario largo que contenía estas preguntas básicas al igual que un número de preguntas adicionales. Se utilizó un procedimiento de muestreo para determinar aquellas unidades de vivienda que recibirían el cuestionario largo al momento de la visita del enumerador. Una de cada seis unidades de vivienda (aproximadamente 17 por ciento) recibió el cuestionario largo o cuestionario de muestra. Los cuestionarios del censo estaban disponibles en español y en inglés. Se utilizaron cuestionarios especiales para la enumeración de personas en alojamientos de grupo tales como colegios y universidades, hospitales, prisiones, instalaciones militares y barcos. Estos cuestionarios contenían las preguntas sobre población pero no incluían las preguntas sobre la vivienda.

### PROCEDIMIENTOS PARA LA ELABORACIÓN DE DATOS

Los cuestionarios del Censo de Puerto Rico de 1980 fueron elaborados de manera similar a la utilizada para el censo de 1970. Los cuestionarios fueron diseñados para ser elaborados electrónicamente por FOSDIC (Film Optical Sensing Device for Input to Computer). Para la mayoría de las preguntas en el cuestionario, la información proporcionada por la persona u obtenida por el enumerador se indicaba marcando las respuestas en las posiciones predesignadas que serían "leídas" por FOSDIC de una copia en microfilm del cuestionario y transferidas a cintas de computadora sin procedimiento de elaboración manual intermedio. La cinta de computadora no incluyó información sobre nombres ni direcciones de individuos.

La elaboración de los datos se llevó a cabo en dos etapas. En la elaboración de los datos de 100 por ciento, todos los cuestionarios cortos, y las páginas 2 y 3 de los cuestionarios largos (que contenían las mismas preguntas que el cuestionario corto), fueron microfilmados, "leídos" por FOSDIC y transferidos a cintas de computadora para tabulación. Para los datos de muestra, los cuestionarios largos (o de muestra) fueron elaborados mediante operaciones de codificación manuales debido a que algunas preguntas requerían que el respondedor pro-

porcionara respuestas escritas que no podían ser leídas por FOSDIC. A las respuestas escritas en cada cuestionario, los codificadores del Negociado del Censo le asignaron códigos alfabéticos o numéricos en encasillados de codificación legibles por FOSDIC. Después de completarse toda la codificación, los cuestionarios largos fueron microfilmados, y el microfilm fue "leído" por FOSDIC y transferido a cintas de computadora.

La cinta que contenía la información de los cuestionarios se elaboró en las computadoras del Negociado del Censo

mediante un número de pasos de revisión y tabulación. Entre los productos de esta operación se encuentran cintas de computadora de las cuales se prepararon las tablas en este informe (y la mayoría de las otras tablas en las publicaciones del censo de 1980), utilizando equipo de composición fototipográfica en la Imprenta del Gobierno de los Estados Unidos.

Una descripción más detallada de los procedimientos de recopilación y elaboración de datos puede obtenerse del *Users' Guide*, PHC80-R1, del Censo de Población y Vivienda de 1980.

### INTRODUCCIÓN

Las cifras presentadas en esta publicación se basan en la muestra censal para 1980. Los datos son estimaciones de las cifras que hubiesen resultado de un recuento completo. Es de esperarse que las estimaciones varíen del resultado del recuento completo, ya que éstas están sujetas a dos tipos de errores básicos—errores de muestreo y errores ajenos al muestreo. El error de muestreo en los datos surge de la selección de personas y unidades de vivienda a ser incluidas en la muestra. El error ajeno al muestreo es el resultado de todos los demás errores que pueden ocurrir durante las fases de recopilación y elaboración de los datos del censo. Por consiguiente, el error ajeno al muestreo afecta los datos en esta publicación. Una discusión más detallada sobre los errores de muestreo y errores ajenos al muestreo, y una descripción del procedimiento de estimación se presentan en este apéndice.

### DISEÑO DE LA MUESTRA

Mientras cada persona y unidad de vivienda en Puerto Rico fue enumerada en un cuestionario que solicitaba cierta información demográfica básica (e.g., edad, número de cuartos en alojamientos, alquiler mensual), una muestra de personas y unidades de vivienda fue enumerada en un cuestionario que solicitaba información adicional. La unidad de muestreo básica para el censo de 1980 fue la unidad de vivienda, incluyendo a todos sus ocupantes. Para personas viviendo en alojamientos de grupo, la unidad de muestreo fue la persona. Una de cada seis unidades de vivienda o personas en alojamientos de grupo se incluyó en la muestra.

El Censo de Puerto Rico se llevó a cabo mediante una combinación de autoenumeración y entrevista personal. Varios días antes del Día del Censo, en áreas con servicio de entrega postal, el cartero repartió a cada hogar en su ruta de entrega, un cuestionario anticipado del censo que contenía información explicativa y las mismas preguntas que el cuestionario corto.

En áreas donde no había servicio de entrega postal, los cuestionarios estaban disponibles en aquellos lugares en que las personas recogían su correspondencia. Para cada enumerador se preparó un libro de listado en blanco que identificaba las líneas designadas para la muestra (cada sexta línea). Comenzando el Día del Censo, los enumeradores recorrieron el área sistemáticamente y anotaron en el libro de listado todas las unidades de vivienda en el mismo orden en el cual las encontraron. Se obtuvieron cuestionarios llenos, incluyendo la información de la muestra para cualquier unidad de vivienda anotada en una línea designada para la muestra.

Un enumerador era responsable de una pequeña área geográfica conocida como un distrito de enumeración. Un distrito

de enumeración usualmente representaba el área de trabajo promedio para un enumerador.

### ERRORES EN LOS DATOS

Debido a que los datos en esta publicación se basan en una muestra, pueden diferir un poco de las cifras que se hubieran obtenido de un recuento completo donde todas las unidades de vivienda, personas en esas unidades de vivienda y personas viviendo en alojamientos de grupo se hubieran enumerado utilizando los mismos cuestionarios, las mismas instrucciones, los mismos enumeradores, etc. La desviación entre la estadística muestral y el promedio de las estadísticas de todas las muestras posibles se llama error de muestreo. El error estándar de una estadística muestral es una medida de la variación entre los estimados de todas las muestras posibles y por lo tanto es una medida de la precisión con la cual una estadística muestral particular se aproxima al resultado promedio de todas las muestras posibles. La estadística muestral y su respectivo error estándar estimado permiten la construcción de estimaciones de intervalos con cierto nivel de confianza prescrita de que el intervalo incluye el resultado promedio de todas las posibles muestras. El método para calcular los errores estándares e intervalos de confianza para los datos en este informe aparece a continuación.

Además de la variabilidad que surge de los procedimientos de muestreo, tanto los datos obtenidos de la muestra como los datos obtenidos en el recuento total están sujetos a errores ajenos al muestreo. El error ajeno al muestreo se puede introducir durante cada una de las muchas extensas y complejas operaciones utilizadas para recopilar y elaborar los datos censales. Por ejemplo, operaciones tales como la corrección, revisión o

manejo de los cuestionarios pueden introducir errores en los datos. Una discusión más detallada de las fuentes de errores ajenos al muestreo se presenta en la sección sobre "Control de Errores Ajenos al Muestreo" en este apéndice.

Los errores ajenos al muestreo pueden afectar los datos en dos formas. Los errores que se introducen al azar aumentan la variabilidad de los datos y por lo tanto se deben reflejar en el error estándar. Los errores que tienden a ser consistentes en una dirección sesgan los datos de la muestra y del recuento total en esa dirección. Por ejemplo, si los respondedores consistentemente tienden a sobrestimar los gastos mensuales del propietario, entonces las estimaciones que resultan para hogares por categorías de gastos mensuales del propietario estarán sesgadas hacia las categorías de gastos mensuales del propietario más altas. Tales tipos de sesgos no se reflejan en el error estándar.

## Cómputo de Errores Estándares

**Totales y Porcentajes**—Las tablas A a la C de este apéndice contienen la información necesaria para computar los errores estándares de las estadísticas muestrales en este informe. Para hacer este cálculo es necesario conocer, para la característica, el error estándar no ajustado presentado en la tabla A o B que resultaría de un diseño de muestra aleatoria simple (de personas, familias, o unidades de vivienda), y una técnica de estimación simple; y el factor de ajuste para la característica particular estimada, presentado en la tabla C. Los factores de ajuste reflejan los efectos del diseño muestral actual y del procedimiento complejo de estimación por proporciones utilizado en el censo de 1980.

Para calcular el error estándar aproximado de una estadística para un área geográfica, siga los pasos que aparecen a continuación:

- Obtenga el error estándar no ajustado de la tabla A o B (o de la fórmula que aparece bajo la tabla) para el total o porcentaje estimado, respectivamente.
- Utilice la tabla C para obtener el factor para la característica (e.g., aire acondicionado, año en que se construyó la estructura) con la cual está trabajando. Si la estadística es

una tabulación cruzada de más de una característica, use el factor más grande. Multiplique el error estándar no ajustado por este factor.

Como indica la fórmula que aparece debajo de las tablas A y B, los errores estándares no ajustados de las estimaciones de cero, o de totales o porcentajes estimados muy pequeños, se aproximan a cero. Este también es el caso para porcentajes o totales estimados muy grandes que se aproximan al tamaño de las áreas de tabulación a las cuales corresponden. Sin embargo, estas estimaciones de totales y porcentajes todavía están sujetas a variabilidades de muestreo y a variabilidades ajenas al muestreo, y un error estándar estimado de cero (o un error estándar muy pequeño) no es apropiado.

Para por cientos estimados menores de 2 o mayores de 98, utilice los errores estándares *no ajustados* en la tabla B que aparecen en la línea "2 ó 98." Para un total estimado menor de 50 o que difiera del tamaño total del área de tabulación por 50 o menos, utilice un error estándar *no ajustado* de 16.

Una ilustración del uso de las tablas se presenta en una sección subsiguiente de este apéndice.

**Diferencias**—Los errores estándares estimados en estas tablas no son directamente aplicables a diferencias entre dos estadísticas muestrales. Para poder estimar el error estándar de una diferencia, las tablas se utilizan de una manera un tanto diferente en las siguientes tres situaciones:

- Para la diferencia entre una estadística muestral y un valor obtenido de un recuento total, utilice el error estándar de la estadística muestral.
- Para la diferencia entre (o la suma de) dos estadísticas muestrales, el error estándar apropiado es aproximadamente la raíz cuadrada de la suma de los cuadrados de los dos errores estándares individuales; o sea, para los errores estándares  $Ee_x$  y  $Ee_y$  de las estadísticas "x" y "y":

$$Ee_{(x+y)} = Ee_{(x-y)} = \sqrt{(Ee_x)^2 + (Ee_y)^2}$$

Este método, sin embargo, subestimaré (sobrestimaré) el error estándar si existe una alta correlación positiva (negativa) entre los dos términos en una suma o una alta correlación negativa (positiva) entre los dos términos en una diferencia. Este método también se puede utilizar para determinar la diferencia entre (o la suma de) estadísticas muestrales de dos censos o entre una muestra censal y otra encuesta. El error estándar para estadísticas no basadas en la muestra del censo de 1980 se debe obtener de una fuente apropiada fuera de esta publicación.

- Para la diferencia entre dos estadísticas muestrales, una de las cuales es una subclase de la otra, utilice las tablas directamente cuando la diferencia calculada es la estimación que interesa.

**Medianas**—Para obtener el error estándar de la mediana de una característica, es necesario examinar la distribución de la cual se deriva la mediana ya que el tamaño de la base y la distribución misma afectan el error estándar. Aquí se presenta un método aproximado. Como primer paso, calcule la mitad del número en el cual se basa la mediana (refiérase a este resultado como  $N/2$ ). Trate a  $N/2$  como si fuera una estimación cualquiera y obtenga su error estándar según se indicó en la sección anterior utilizando las tablas A y C. Calcule el intervalo de confianza deseado para  $N/2$ . Comenzando con el valor más bajo de la característica, acumule las frecuencias en cada categoría de la característica hasta que la suma sea igual o por primera vez exceda el límite inferior del intervalo de confianza para  $N/2$ . Mediante interpolación lineal, obtenga un valor de la característica correspondiente a esta suma. Este es el valor inferior del intervalo de confianza de la mediana. De manera similar, acumule las frecuencias comenzando con el valor más alto de la característica hasta que la suma sea igual o exceda el recuento del límite superior del intervalo para  $N/2$ . Interpole como se hizo anteriormente para obtener el límite superior del intervalo de confianza de la mediana estimada.

## Intervalos de Confianza

Una estadística muestral y su error estándar estimado se pueden utilizar para construir intervalos de confianza para la estadística. Estos intervalos son las amplitudes que contendrán el valor promedio de la característica estimada que resulta de todas las muestras posibles, con una probabilidad conocida. Por ejemplo, si todas las muestras posibles que puedan resultar del diseño muestral del censo de 1980 fueran seleccionadas independientemente y examinadas bajo las mismas condiciones, y si la estadística y su error estándar estimado fueran calculados para cada una de estas muestras, entonces:

- (1) Aproximadamente el 68 por ciento de los intervalos entre un error estándar estimado por debajo de la estimación y un error estándar estimado sobre la estimación contendrán el resultado promedio de todas las muestras posibles; y
- (2) Aproximadamente el 95 por ciento de los intervalos dentro de dos errores estándares estimados por debajo de la estimación y dos errores estándares estimados sobre la estimación contendrán el resultado promedio de todas las muestras posibles.

Estos intervalos se conocen como intervalos de confianza de 68 y 95 por ciento, respectivamente.

El valor promedio de la característica estimada que se puede derivar de todas las muestras posibles está o no contenido dentro de cualquier intervalo particular computado. Por lo tanto, no se puede aseverar que el valor promedio tiene cierta probabilidad de caer entre los límites del intervalo de confianza calculado. Más bien, se puede aseverar, con una probabilidad o confianza especificada, que el intervalo de confianza calculado incluye la estimación promedio de todas las muestras posibles (aproximadamente el valor del recuento total).

También se pueden construir intervalos de confianza para la diferencia entre dos cifras muestrales. Esto se hace calculando la diferencia entre estas cifras, obteniendo el error estándar de la diferencia (utilizando la fórmula presentada anterior-

mente), y formulando luego un intervalo de confianza para esa diferencia estimada como se hizo anteriormente. Se puede entonces decir, con confianza especificada, que este intervalo incluye la diferencia que se hubiera obtenido al promediar los resultados de todas las muestras posibles.

Los errores estándares estimados presentados en este informe no incluyen todas las porciones de la variabilidad resultante de errores ajenos al muestreo que puedan estar presentes en los datos. Los errores estándares reflejan el efecto de variaciones simples en las respuestas, pero no el efecto de errores correlacionados introducidos por enumeradores, codificadores, u otros empleados de campo o de elaboración. Por lo tanto, los errores estándares calculados representan un límite inferior del error total. Como resultado de esto, los intervalos de confianza contruidos utilizando estos errores estándares estimados pueden no alcanzar los niveles de confianza establecidos (i.e., 68 ó 95 por ciento). Por esto, se debe ejercer cautela en la interpretación de los datos en esta publicación basados en errores estándares estimados.

Para más información sobre intervalos de confianza y errores ajenos al muestreo, refiérase a cualquier texto sobre teoría de muestreo.

## Uso de las Tablas para Computar Errores Estándares

La tabla 23 indica que en la zona urbana de Carolina, 27,746 unidades de vivienda de un total de 46,989 unidades de vivienda para uso todo el año no tenían aire acondicionado. La tabla C presenta el factor de ajuste de 1.0 para la característica "Aire acondicionado."

El error estándar no-ajustado para el total estimado de 27,746 se obtiene de la tabla A o de la fórmula que se presenta bajo la tabla A. Para evitar hacer interpolaciones, el uso de la fórmula se demostrará aquí. La fórmula para obtener el error estándar no-ajustado,  $E_e$ , es:

$$E_e = \sqrt{5(27,746) \left(1 - \frac{27,746}{47,758}\right)} =$$

241 unidades de vivienda.

Nota: El recuento total de unidades de vivienda en la zona urbana de Carolina es 47,758.

El error estándar de la estimación de 27,746 unidades de vivienda para uso todo el año sin aire acondicionado se obtiene multiplicando el error estándar no ajustado de 241 por el factor de ajuste, que se determinó ser 1.0. Esto resulta en el error estándar estimado de 241 para el total de unidades de vivienda para uso todo el año sin aire acondicionado en la zona urbana de Carolina.

El por ciento estimado de unidades de vivienda para uso todo el año sin aire acondicionado es 59.0. De la tabla B, se obtiene un error estándar no ajustado de 0.52. Por lo tanto, el error estándar para el 59.0 por ciento estimado de unidades de vivienda para uso todo el año sin aire acondicionado es  $0.52 \times 1.0 = 0.52$ .

Una nota de cautela con relación a los valores numéricos es necesaria. Los errores estándares de los porcentajes que se calculan de esta manera son aproximaciones. Los cálculos se pueden expresar hasta varios lugares decimales, pero el hacer eso indicaría más precisión en los datos de la que es justificable. Los resultados finales no deben tener más de un punto decimal cuando el error estándar estimado es de un punto porcentual (i.e., 1.0) o más.

En el ejemplo anterior, el error estándar de las 27,746 unidades de vivienda para uso todo el año sin aire acondicionado en la zona urbana de Carolina, resultó ser 241. Por lo tanto, un intervalo de confianza de 95 por ciento para este total estimado resulta ser:

$$[27,746 - 2(241)] \text{ a } [27,746 + 2(241)]$$

ó

27,264 a 28,228.

El cómputo de errores estándares e intervalos de confianza se ilustra cuando se obtiene la diferencia entre dos estadísticas muestrales. Por ejemplo, en la tabla 23, el número de unidades de vivienda para uso todo el año sin aire acondicionado en la zona urbana de Ponce era 37,828, y el número total de unidades de vivienda para uso todo el año era 47,035. Por lo tanto, el porcentaje de unidades de vivienda para uso todo el año sin aire acondicionado era 80.4 por ciento. El error estándar no ajustado de la tabla B es 0.42 por ciento. La tabla C presenta el factor de ajuste de 1.0 para "Aire acondicionado." Por

lo tanto, el error estándar aproximado del porcentaje (80.4 por ciento) es  $0.42 \times 1.0 = 0.42$ .

Supongamos que se desea obtener el error estándar de la diferencia entre los porcentajes de las unidades de vivienda para uso todo el año sin aire acondicionado en las zonas urbanas de Carolina y de Ponce. La diferencia en los porcentajes de interés para las dos zonas urbanas es:

$$80.4 - 59.0 = 21.4 \text{ por ciento.}$$

Utilizando los resultados del ejemplo anterior

$$\begin{aligned} Ee(21.4) &= \sqrt{(Ee(80.4))^2 + (Ee(59.0))^2} \\ &= \sqrt{(0.42)^2 + (0.52)^2} \\ &= 0.67 \text{ por ciento.} \end{aligned}$$

El intervalo de confianza de 95 por ciento para la diferencia se calcula como se hizo anteriormente:

$$\begin{aligned} &[21.4 - 2(0.67)] \text{ a } [21.4 + 2(0.67)] \\ &\quad \quad \quad 6 \\ &20.1 \text{ a } 22.7. \end{aligned}$$

## PROCEDIMIENTO DE ESTIMACIÓN

Las estimaciones que se presentan en esta publicación se obtuvieron mediante el uso de un procedimiento repetitivo de estimaciones por proporciones que resultó en la asignación de una ponderación al récord de cada persona o unidad de vivienda en la muestra. Para cualquier área de tabulación determinada, se estimó el total de una característica sumando las ponderaciones asignadas a las personas o unidades de vivienda que poseían la característica en el área de tabulación. Las estimaciones de las características de las familias se basaron en las ponderaciones que le fueron asignadas a los miembros de las familias designados como jefes de hogar. Al récord de cada persona o unidad de vivienda en la muestra se le asignó exactamente una ponderación que se utilizó para producir las estimaciones de todas las características. Por ejemplo, si la ponderación dada al récord de una persona o unidad de vivienda en la muestra tenía el valor de cinco, todas las características de esa persona o unidad

de vivienda serían tabuladas con una ponderación de cinco. Sin embargo, el procedimiento de estimación asignó ponderaciones que varían de una persona a otra y de una unidad de vivienda a otra.

El procedimiento de estimación utilizado para asignar las ponderaciones se llevó a cabo en "áreas de ponderación" definidas geográficamente. Las áreas de ponderación se formaban generalmente de porciones geográficas adyacentes, las cuales coincidían estrechamente con áreas censales de tabulación que estaban localizadas dentro de los municipios. A las áreas de ponderación se les requería un mínimo de 400 personas en la muestra. Nunca se permitió que las áreas de ponderación cruzaran los límites municipales. En municipios pequeños con un recuento muestral menor de 400 personas, el requisito mínimo en la muestra se cambió para así permitir que el municipio completo se convirtiera en un área de ponderación.

Dentro de un área de ponderación, el procedimiento de estimación por proporciones para las personas se llevó a cabo en tres etapas. Para personas, la primera etapa utilizó 17 grupos de tipo de hogar. La segunda etapa utilizó dos grupos: jefes de hogar y personas que no eran jefes de hogar. La tercera etapa potencialmente podría haber utilizado 16 grupos por edad y sexo. Las etapas fueron las siguientes:

## PERSONAS

### Etapas 1—Tipo de Hogar

Grupo	Personas en Unidades de Vivienda con una Familia con Hijos Propios Menores de 18 Años
1	2 personas en la unidad de vivienda
2	3 personas en la unidad de vivienda
3	4 personas en la unidad de vivienda
4	5 a 7 personas en la unidad de vivienda
5	8 o más personas en la unidad de vivienda

*Personas en Unidades de Vivienda con una Familia sin Hijos Propios Menores de 18 Años*

6-10 2 personas en la unidad de vivienda hasta 8 o más personas en la unidad de vivienda

### Personas en Todas las Demás Unidades de Vivienda

11 1 persona en la unidad de vivienda  
12-16 2 personas en la unidad de vivienda hasta 8 o más personas en la unidad de vivienda

17 *Personas en alojamientos de grupo*

### Etapas II—Jefe de Hogar/No es Jefe de Hogar

#### Grupo

1 Jefe de hogar  
2 No es jefe de hogar (incluyendo a personas en alojamientos de grupo.)

### Etapas III—Edad/Sexo

Grupo	Varones
1	0 a 4 años de edad
2	5 a 14 años de edad
3	15 a 19 años de edad
4	20 a 24 años de edad
5	25 a 34 años de edad
6	35 a 44 años de edad
7	45 a 64 años de edad
8	65 años de edad o más

#### Hembras

9-16 Las mismas categorías de edad que para los grupos 1 al 8

Dentro de un área de ponderación, el primer paso en el procedimiento de estimación fue el de asignar una ponderación inicial al récord de cada persona en la muestra. Esta ponderación era aproximadamente equivalente al inverso de la probabilidad de seleccionar a una persona para la muestra censal.

El próximo paso en el procedimiento de estimación fue el de combinar, de ser necesario, los grupos en cada una de las tres etapas anteriores al procedimiento repetitivo de estimación por proporciones para así aumentar la confiabilidad de dicho procedimiento. Para cada etapa, cualquier grupo que no cumplía con ciertos criterios relacionados al recuento muestral no ponderado o a la proporción

entre el recuento total y el recuento muestral ponderado inicialmente, fue combinado o agregado a otro grupo en la misma etapa según un patrón especificado.

Como paso final, las ponderaciones iniciales pasaron por tres etapas de ajuste por proporciones en las cuales se utilizaron los grupos presentados anteriormente. En la primera etapa, la proporción entre el recuento censal total a la suma de las ponderaciones iniciales para cada persona en la muestra se computó para cada grupo de la etapa I. La ponderación inicial asignada a cada persona en un grupo se multiplicó por la proporción del grupo de la etapa I para así obtener una ponderación ajustada. En la segunda etapa, las ponderaciones ajustadas de la primera etapa fueron nuevamente ajustadas por la proporción del recuento censal total a la suma de las ponderaciones de la primera etapa para personas en la muestra en cada grupo de la etapa II. Finalmente, las ponderaciones de la segunda etapa se ajustaron, en la tercera etapa, por la proporción del recuento censal total a la suma de las ponderaciones de la segunda etapa para las personas en la muestra en cada grupo de la etapa III. Las tres etapas de ajuste se llevaron a cabo dos veces (dos repeticiones) en el orden presentado anteriormente. Las ponderaciones obtenidas de la segunda repetición de la tercera etapa fueron asignadas a los récords de las personas en la muestra. Sin embargo, para evitar complicaciones al redondear los datos tabulados, solamente se asignaron ponderaciones en números enteros. Por ejemplo, si la ponderación final para las personas en un grupo particular era 7.2, entonces a una quinta parte de las personas en la muestra en este grupo se le asignó, al azar, la ponderación de 8 y las restantes cuatro quintas partes recibieron una ponderación de 7.

El procedimiento de estimación por proporciones para las unidades de vivienda fue esencialmente el mismo que se utilizó para las personas. La diferencia principal fue que el procedimiento de estimación por proporciones de las unidades de vivienda ocupadas se hizo en dos etapas y el procedimiento de estimación por proporciones de las unidades de vivienda desocupadas se hizo en una etapa. La primera etapa, para unidades de vivienda ocupadas, utilizó 16 categorías de tipo de

hogar, y la segunda, potencialmente, podría haber utilizado 19 grupos de tenencia/valor o alquiler. Para unidades de vivienda desocupadas, se utilizaron tres grupos. Las etapas del procedimiento de estimación por proporciones para unidades de vivienda fueron las siguientes:

### UNIDADES DE VIVIENDA OCUPADAS

#### Etapla I—Tipo de Hogar

#### Grupo Unidades de Vivienda con una Familia con Hijos Propios Menores de 18 Años

1	2 personas en la unidad de vivienda
2	3 personas en la unidad de vivienda
3	4 personas en la unidad de vivienda
4	5 a 7 personas en la unidad de vivienda
5	8 o más personas en la unidad de vivienda

#### Unidades de Vivienda con una Familia Sin Hijos Propios Menores de 18 Años

6-10	2 personas en la unidad de vivienda hasta 8 o más personas en la unidad de vivienda
------	---

#### Todas las Demás Unidades de Vivienda

11	1 persona en la unidad de vivienda
12-16	2 personas en la unidad de vivienda hasta 8 o más personas en la unidad de vivienda

#### Etapla II—Tenencia/Valor o Alquiler

Grupo	Propietario
	Valor de la Casa
1	\$0 a \$1,999
2	\$2,000 a \$4,999
3	\$5,000 a \$9,999
4	\$10,000 a \$19,999
5	\$20,000 a \$49,999
6	\$50,000 a \$74,999
7	\$75,000+
8	Otros Propietarios

#### Inquilino

#### Categorías de Alquiler

9	\$1 a \$29
10	\$30 a \$59
11	\$60 a \$99
12	\$100 a \$149
13	\$150 a \$199
14	\$200 a \$249
15	\$250 a \$299
16	\$300 a \$399
17	\$400+
18	Otros Inquilinos
19	Sin Pago en Efectivo

### UNIDADES DE VIVIENDA DESOCUPADAS

#### Grupo

1	Desocupadas para Alquiler
2	Desocupadas para la Venta
3	Otras Unidades Desocupadas

Las estimaciones producidas por este procedimiento logran algunos de los beneficios de eficiencia muestral que hubieran resultado si la población hubiera sido estratificada en los grupos de estimación por proporciones antes del muestreo, y la tasa de muestreo se hubiera aplicado a cada grupo independientemente. El efecto neto es una reducción tanto en el error estándar como en el posible sesgo de la mayoría de las características estimadas a niveles por debajo de los que hubieran resultado del simple uso de la ponderación inicial (no-ajustada). Un subproducto de este procedimiento de estimación es que las estimaciones de la muestra serán, en la mayoría de los casos, consistentes con las cifras del recuento total para los grupos de población y unidades de vivienda utilizados en el procedimiento de estimación.

### CONTROL DE ERRORES AJENOS AL MUESTREO

Como se discutió anteriormente, el error ajeno al muestreo está presente tanto en los datos de la muestra como en los datos del recuento total. Si se deja sin controlar, este tipo de error podría introducir sesgo grave en los datos, cuya variabilidad podría aumentar dramáticamente sobre aquella que resultaría exclusivamente del muestreo. Mientras que es imposible eliminar completamente el error ajeno al muestreo de una operación tan grande

y compleja como el Censo de Puerto Rico de 1980, el Negociado del Censo intentó controlar las fuentes de los errores ajenos al muestreo durante las operaciones de recopilación y elaboración de datos. Las fuentes primarias del error ajeno al muestreo y los programas establecidos para controlar este tipo de error se describen a continuación. El éxito de estos programas, sin embargo, dependió del grado hasta el cual se siguieron las instrucciones durante la toma del censo. Hasta donde sea posible, tanto los efectos de estos programas como la cantidad de error que permaneció después de su aplicación serán evaluados.

**Subcobertura**—Es posible que algunas unidades de vivienda o personas hayan sido omitidas completamente por el censo. Esta subcobertura de personas y unidades de vivienda puede introducir sesgos en los datos. A continuación se explican dos programas que fueron desarrollados para enfocar este problema importante.

- Los enumeradores llenaron una tarjeta de dirección para cada unidad de vivienda que anotaron. Las tarjetas fueron entregadas a las oficinas postales donde los carteros las revisaron y anotaron aquellas direcciones para las cuales había entrega de correo pero no había tarjeta. Las direcciones que faltaban se añadieron al listado censal de unidades de vivienda y luego fueron enumeradas.
- Para reducir aún más la subcobertura de las personas, se hizo una segunda revisión de las unidades de vivienda que inicialmente fueron clasificadas como desocupadas o inexistentes.

Se publicarán discusiones más extensas sobre los programas desarrollados para reducir la subcobertura según se completen los análisis de dichos programas.

**Error del Respondedor y del Enumerador**—La persona que llena el cuestionario o que contesta las preguntas hechas por el enumerador puede introducir errores al ofrecer información incorrecta o incompleta. Para reducir esta fuente de error, las preguntas se frasearon lo más claramente posible, a base de los resultados de las pruebas censales hechas con anterioridad al censo y se le proporcionó

a cada unidad de vivienda instrucciones detalladas sobre cómo contestar el cuestionario corto. Además, las respuestas del respondedor se revisaron para asegurar que fueran completas y consistentes, y se llevó a cabo un seguimiento según fue necesario. Por ejemplo, si la respuesta sobre abastecimiento de agua para una unidad de vivienda estaba incompleta, los procedimientos de revisión de campo de los cuestionarios largos reconocían la situación y se hacía un intento de obtener la información.

El enumerador pudo haber malinterpretado o anotado incorrectamente la información proporcionada por el respondedor, pudo no haber obtenido parte de la información para una persona o unidad de vivienda o haber recopilado información para unidades de vivienda que no habrían sido designadas como parte de la muestra. Para controlar estos problemas, el trabajo de los enumeradores fue verificado cuidadosamente. El personal a cargo de las operaciones de campo fue adiestrado mediante el uso de un adiestramiento uniforme que incluyó ejercicios prácticos en el uso de materiales censales. Además, el procedimiento de estimación se diseñó para controlar los sesgos que podrían resultar de la recopilación de datos de unidades de vivienda que no habrían sido designadas como parte de la muestra.

**Error de Elaboración**—Las muchas fases en la elaboración del censo representan fuentes potenciales para la introducción de errores ajenos al muestreo. La elaboración de los cuestionarios censales incluye la revisión en el campo, el seguimiento y el envío de los cuestionarios completados; la codificación manual de las respuestas escritas y la elaboración electrónica de los datos. Las diversas operaciones de campo, codificación y de computadora pasan por una serie de revisiones de control de calidad para asegurar que fueron llevadas a cabo correctamente.

**Falta de Respuesta**—La falta de respuestas a preguntas particulares en el cuestionario censal permite la introducción de sesgo en los datos, ya que las características de las personas que no respondieron no se han observado y pueden diferir de aquellas informadas por las personas que respondieron. Como resultado de esto, cualquier procedimiento de asignación

utilizando datos de los respondedores podría no reflejar esta diferencia completamente ya sea al nivel de elemento (la persona o unidad de vivienda particular) o en el promedio. El minimizar la falta de respuesta proporciona alguna protección contra la introducción de sesgos grandes. Durante el censo, la falta de respuesta se redujo substancialmente durante las operaciones de campo mediante las varias operaciones de revisión y seguimiento dirigidas a obtener una respuesta para cada pregunta. Las características para las faltas de respuesta restantes después de esta operación fueron asignadas por la computadora utilizando datos informados sobre una persona o unidad de vivienda con características similares. El procedimiento de asignación se describe a continuación.

### REVISIÓN DE DATOS INACEPTABLES

El objetivo de la operación de elaboración es producir una serie de estadísticas que describan el inventario de vivienda de Puerto Rico lo más correcta y claramente posible. Para lograr este objetivo, ciertas anotaciones inaceptables fueron revisadas.

En el campo, los cuestionarios se revisaron por un empleado de oficina o enumerador para corregir omisiones o inconsistencias y, de ser necesario, se llevó a cabo un seguimiento para obtener la información que faltaba. Además, se llevó a cabo una revisión similar de los cuestionarios en la oficina central de elaboración. Sin embargo, como regla general, la revisión se llevó a cabo manualmente sólo cuando no podía ser hecha eficazmente por máquina.

Como uno de los primeros pasos en la revisión por computadora, la configuración de las marcas en el cuestionario fue examinada electrónicamente para determinar si contenía información para una persona o una unidad de vivienda o meramente marcas espurias. Si aún faltaba alguna característica cuando los cuestionarios llegaron a la oficina central de elaboración, ésta fue proporcionada mediante la asignación de respuestas. La asignación de códigos aceptables en lugar de respuestas inaceptables fue necesaria con mayor frecuencia cuando faltaba la respuesta para cierta pregunta o cuando la información obtenida para una pregunta particular era inconsistente con otra

pregunta para la misma unidad de vivienda. Al igual que en censos anteriores, el procedimiento general para cambiar anotaciones inaceptables fue el de asignar una anotación para una unidad de vivienda que fuera consistente con anotaciones para otras unidades de vivienda con características similares. Por ejemplo, si la unidad fue informada como alquilada pero faltaba la cantidad para el alquiler, la computadora automáticamente asignó el alquiler que fue informado para la unidad anterior ocupada por un inquilino. La asignación de códigos aceptables en lugar de espacios en blanco o anotaciones

inaceptables está diseñada para aumentar la utilidad de los datos.

Se establecieron tolerancias específicas para el número de asignaciones y substituciones por computadora que se permitirían. Si el número de correcciones estaba por encima de la tolerancia, los cuestionarios en los cuales ocurrieron los errores se revisaban manualmente. Si se encontraba que los errores resultaron de cuestionarios dañados, microfilmación incorrecta, de una lectura errónea por FOSDIC de cuestionarios intactos, o de otros tipos de falla mecánica, los cuestionarios se elaboraron nuevamente.

**TABLAS DE ASIGNACIÓN**

La extensión de las asignaciones en el proceso de revisión y su efecto en cada uno de los temas, se presenta en las tablas B-1, B-2 y B-2a que siguen a la tabla 35. En estas tablas, "unidades de vivienda con una o más asignaciones" se presentan como porcentajes de unidades de vivienda para uso todo el año o unidades de vivienda ocupadas. En ciertos casos, estas tablas presentan porcentajes de un grupo específico de unidades. Los porcentajes no se presentan si la partida no se publica para las áreas especificadas.

## Apéndice D.—Exactitud de los Datos

Tabla A. Errores Estándares No Ajustados para Totales Estimados

[Basado en una muestra aleatoria simple de 1-en-6]

Total Estimado <sup>1/</sup>	Tamaño del área de publicación <sup>2/</sup>											
	500	1 000	2 500	5 000	10 000	25 000	50 000	100 000	250 000	500 000	1 000 000	4 000 000
50.....	16	16	16	16	16	16	16	16	16	16	16	16
100.....	20	21	22	22	22	22	22	22	22	22	22	22

500.....	-	35	45	45	50	50	50	50	50	50	50	50
1 000.....	-	-	55	65	65	70	70	70	70	70	70	70
2 500.....	-	-	-	80	95	110	110	110	110	110	110	110
5 000.....	-	-	-	-	110	140	150	150	160	160	160	160
10 000.....	-	-	-	-	-	170	200	210	220	220	220	220
15 000.....	-	-	-	-	-	170	230	250	270	270	270	270
25 000.....	-	-	-	-	-	-	250	310	340	350	350	350
75 000.....	-	-	-	-	-	-	-	310	510	570	590	610
100 000.....	-	-	-	-	-	-	-	-	550	630	670	700
250 000.....	-	-	-	-	-	-	-	-	-	790	970	1 080
500 000.....	-	-	-	-	-	-	-	-	-	-	1 120	1 480
1 000 000.....	-	-	-	-	-	-	-	-	-	-	-	1 940

<sup>1/</sup> Para estimaciones mayores de 1,000,000, el error estándar es un tanto mayor que los valores en la tabla. La fórmula presentada a continuación se debe utilizar al calcular el error estándar.

$$Ee(\hat{Y}) = \sqrt{5Y(1 - \frac{\hat{Y}}{N})}$$

N = Tamaño del área

$\hat{Y}$  = Estimación del total de la característica

<sup>2/</sup> El recuento total de personas en el área si la estimación es una característica de la persona, o el recuento total de las unidades de vivienda en el área si la estimación es una característica de una unidad de vivienda.

Tabla B. Error Estándar No Ajustado en Puntos Porcentuales para Porcentajes Estimados

[Basado en una muestra aleatoria simple de 1-en-6]

Porcentaje Estimado	Base porcentual <sup>1/</sup>												
	500	750	1 000	1 500	2 500	5 000	7 500	10 000	25 000	50 000	100 000	250 000	500 000
2 o 98.....	1.4	1.1	1.0	0.8	0.6	0.4	0.4	0.3	0.2	0.1	0.1	0.1	0.1
5 o 95.....	2.2	1.8	1.5	1.3	1.0	0.7	0.6	0.5	0.3	0.2	0.2	0.1	0.1
10 o 90.....	3.0	2.4	2.1	1.7	1.3	0.9	0.8	0.7	0.4	0.3	0.2	0.1	0.1
15 u 85.....	3.6	2.9	2.5	2.1	1.6	1.1	0.9	0.8	0.5	0.4	0.3	0.2	0.1
20 u 80.....	4.0	3.3	2.8	2.3	1.8	1.3	1.0	0.9	0.6	0.4	0.3	0.2	0.1
25 o 75.....	4.3	3.5	3.1	2.5	1.9	1.4	1.1	1.0	0.6	0.4	0.3	0.2	0.1
30 o 70.....	4.6	3.7	3.2	2.6	2.0	1.4	1.2	1.0	0.6	0.5	0.3	0.2	0.1
35 o 65.....	4.8	3.9	3.4	2.8	2.1	1.5	1.2	1.1	0.7	0.5	0.3	0.2	0.2
50.....	5.0	4.1	3.5	2.9	2.2	1.6	1.3	1.1	0.7	0.5	0.4	0.2	0.2

<sup>1/</sup> Para un porcentaje y/o base porcentual no presentado en la tabla, la fórmula que se presenta a continuación se puede utilizar para calcular el error estándar.

$$Ee(\hat{p}) = \sqrt{\frac{5}{B} \hat{p}(100-\hat{p})}$$

B = La base de la estimación porcentual

$\hat{p}$  = Estimación porcentual

Tabla C. Factores de Ajuste para Errores Estándares

Característica	Factor de Ajuste
Clasificación de la ocupación y de la vacancia.....	1.0
Tenencia.....	1.1
Unidades en la estructura.....	1.2
Abastecimiento de agua.....	1.0
Disposición de aguas negras.....	1.0
Año en que se construyó la estructura.....	1.0
Año en que el jefe de hogar se mudó a la unidad de vivienda.....	1.1

## Sus respuestas son confidenciales

Por ley (título 13, Código de los Estados Unidos), los empleados del censo están sujetos a multa y/o prisión por cualquier divulgación de sus respuestas. Solamente después de los próximos 72 años es que su información está disponible a otras agencias del gobierno o al público. La misma ley requiere que usted conteste las preguntas según su mejor saber y entender.

**NOTA:** Las respuestas al cuestionario largo se obtuvieron mediante entrevista personal, por tanto no se imprimieron instrucciones al respondedor ni en inglés ni en español.

Departamento de Comercio de los Estados Unidos  
Negociado del Censo  
Forma D-2 PR

### Un mensaje del Director del Negociado del Censo de los Estados Unidos . . .

Si nuestra Nación ha de hacer frente con éxito a los muchos retos nacionales y locales que afrontamos, debemos, de tiempo en tiempo, hacer un inventario de nosotros mismos como pueblo. Este es el propósito del censo de 1980.

La necesidad esencial de un censo poblacional se reconoció casi 200 años atrás cuando se redactó la Constitución de los Estados Unidos. Según estipula el artículo 1, se han efectuado censos de la población de los Estados Unidos cada 10 años. Dentro del programa del Censo de Población y Vivienda de 1980, y de acuerdo al título 13, Código de los Estados Unidos, el Negociado del Censo de los Estados Unidos está llevando a cabo el censo de la población de Puerto Rico al día 1 de abril de 1980.

La ley bajo la cual se toma el censo protege la confidencialidad de sus respuestas. Por los próximos 72 años, o hasta el 1 de abril del año 2052, únicamente empleados juramentados del censo tienen acceso a los informes individuales y ninguna otra persona puede verlos.

Sus respuestas, al ser combinadas con las de otras personas, proveerán las estadísticas que necesitan los sectores públicos y privados, las escuelas, el comercio y la industria, el Gobierno Federal, el Gobierno de Puerto Rico y el Gobierno Municipal. Estas cifras aumentarán el entendimiento de cómo está cambiando la población y la vivienda puertorriqueña. De esta forma, podemos enfrentar más eficientemente los problemas del presente.

El censo es una actividad de vital importancia para Puerto Rico. Por favor, coopere contestando el cuestionario del censo correcta y completamente. Un enumerador del censo visitará su hogar dentro de varios días para recoger el cuestionario completado. Haga el favor de retener el cuestionario en un sitio seguro y conveniente hasta que el enumerador lo visite.

Gracias por su cooperación.

CONTESTE AHORA LAS PREGUNTAS H1—H12  
CON REFERENCIA A SU VIVIENDA

Página 3

Si usted anotó más de 7  
personas en la Pregunta 1,  
favor de leer la nota en la página 20.

PERSONA en la columna 7	
Apellidos	
Nombre	Inicial
Pariente de persona en la columna 1:	
Esposo (a)	Padre/madre
Hijo (a)	Otro pariente
Hermano (a)	
No es pariente de persona en la columna 1:	
Pupilo, huésped	Otro que no es pariente
Compañero de cuarto	
Empleado	
Masculino	Femenino
a. Edad cumplida	
c. Año de nacimiento	
b. Mes de nacimiento	
Ene.—Mar.	
Abr.—Jun.	
Jul.—Sep.	
Oct.—Dic.	
Actualmente casado (a)	Divorciado (a)
Unión consensual	Separado (a)
Viudo (a)	Nunca se ha casado
Nació en:	
Puerto Rico	Municipio
Estados Unidos	Estado
Cuba	
España	
República Dominicana	
Otro país	
No, no ha asistido desde el 1 de febrero	
Sí, escuela o universidad pública	
Sí, privada, relacionada a iglesia	
Sí, privada, no relacionada a iglesia	
Grado más alto al cual ha asistido:	
Pre-kindergarten Kindergarten	
Escuela elemental hasta escuela superior	
1 2 3 4 5 6 7 8 9 10 11 12	
Universidad 1 2 3 4 5 6 o más	
(año académico)	
Nunca asistió a la escuela — No pregunte la 9	
Actualmente asiste a este grado (a año)	
Terminó este grado (a año)	
No terminó este grado (a año)	
PARA USO DEL CENSO SOLAMENTE	
A.	N

H1. ¿Excluyó a alguien en la Pregunta 1 por no saber si debía anotarse — ej: un bebé aún en el hospital, un huésped que tiene otro hogar a alguien que permanece aquí de vez en cuando y no tiene otro hogar?

Sí — Determine si se debe incluir.  
No

H2. ¿Incluyó usted en la Pregunta 1 a alguien que está ahora ausente del hogar — por ejemplo, de vacaciones u hospitalizado?

Sí — Determine si debe permanecer en la lista.  
No

H3. ¿Hay alguien aquí de visita que no ha sido anotado?

Sí — Determine si se debe incluir.  
No

H4. ¿Entra usted a su vivienda —

- Directamente del exterior o por un pasillo común o público?
- Pasando a través de la vivienda de otra persona?

H5a. ¿Hay agua caliente y fría por tuberías en este edificio?

- Sí, hay agua caliente y fría por tuberías
- No, sólo hay agua fría por tuberías
- No hay agua por tuberías

b. ¿Hay una bañera o ducha en este edificio?

- Sí, para uso exclusivo de este hogar
- Sí, pero usada también por otro hogar
- No hay bañera ni ducha

c. ¿Hay un inodoro en este edificio?

- Sí, para uso exclusivo de este hogar
- Sí, pero usado también por otro hogar
- No — Si "No," ¿qué tipo de servicio sanitario hay?

Letrina  
Otro o ninguno

H6. ¿Cuántos cuartos tiene su vivienda?

Cuente salas, comedores, cocinas y dormitorios, pero no cuente cuartos de baño, balcones, vestíbulos ni pasillos.

- 1 cuarto 4 cuartos 7 cuartos
- 2 cuartos 5 cuartos 8 cuartos
- 3 cuartos 6 cuartos 9 cuartos o más

H7. ¿Es esta vivienda —

- Propia o la está comprando algún miembro de este hogar?
- Alquilada por pago en efectivo?
- Ocupada gratis?

H8. ¿Es este apartamento (casa) parte de un condominio?

No Sí, un condominio

PARA USO DEL CENSO ÚNICAMENTE

A4. Bloque número	A6. Número de serie	B. Tipo de vivienda	Para viviendas desocupadas
		Ocupada	C1. ¿Vivienda para uso
		Primer cuestionario	Todo el año?
		Continuación	Estacional? — No conteste C2, C3 y D.
		Desocupada	C2. Clasificación
		Regular	Para alquiler
		Residencia habitual en otro lugar	Para venta únicamente
		Alojamiento de grupo	Alquilada o vendida pero desocupada
		Primer cuestionario	Para uso ocasional
		Continuación	Otra vacante
			C3. ¿Está entablada (boarded up) esta vivienda?
			Sí No

H9. ¿Qué describe mejor este edificio? Incluya todos los apartamentos aunque estén desocupados.

- Casa móvil o remolque (trailer)
- Casa de una familia, separada de cualquiera otra casa
- Casa de una familia, unida a una o más casas
- Un edificio para 2 familias
- Un edificio para 3 ó 4 familias
- Un edificio para 5 a 9 familias
- Un edificio para 10 a 19 familias
- Un edificio para 20 a 49 familias
- Un edificio para 50 familias o más
- Bote, tienda de campaña, camión cubierto (van) etc.

H10. Si ésta es una casa de una familia —

a. ¿Está la casa en una propiedad de 3 cuerdas o más?

Sí No

b. ¿Se usa alguna parte de la propiedad como:

Sí No

- (1) Establecimiento comercial?
- (2) Oficina médica?
- (3) Otro tipo de oficina?

H11. Si ésta es una casa de una familia o una unidad en un condominio la cual usted posee o está comprando —

¿Cuál es el valor de esta propiedad, es decir, por cuánto cree usted que esta propiedad (casa y terreno o unidad en un condominio) se vendería?

- Menos de \$2,000 \$25,000 a \$27,499
- \$2,000 a \$2,999 \$27,500 a \$29,999
- \$3,000 a \$3,999 \$30,000 a \$32,499
- \$4,000 a \$4,999 \$32,500 a \$34,999
- \$5,000 a \$7,499 \$35,000 a \$37,499
- \$7,500 a \$9,999 \$37,500 a \$39,999
- \$10,000 a \$12,499 \$40,000 a \$44,999
- \$12,500 a \$14,999 \$45,000 a \$49,999
- \$15,000 a \$17,499 \$50,000 a \$59,999
- \$17,500 a \$19,999 \$60,000 a \$74,999
- \$20,000 a \$22,499 \$75,000 a \$99,999
- \$22,500 a \$24,999 \$100,000 o más

H12. Si usted paga alquiler por su vivienda — ¿Cuál es el alquiler mensual?

Si no paga el alquiler mensualmente, vea en el manual de referencia cómo calcular el alquiler mensual.

- Menos de \$30 \$140 a \$149
- \$30 a \$39 \$150 a \$159
- \$40 a \$49 \$160 a \$169
- \$50 a \$59 \$170 a \$179
- \$60 a \$69 \$180 a \$189
- \$70 a \$79 \$190 a \$199
- \$80 a \$89 \$200 a \$224
- \$90 a \$99 \$225 a \$249
- \$100 a \$109 \$250 a \$299
- \$110 a \$119 \$300 a \$349
- \$120 a \$129 \$350 a \$399
- \$130 a \$139 \$400 o más

PARA USO DEL CENSO ÚNICAMENTE

D. Tiempo desocupada	E. Total de personas
Menos de 1 mes	
De 1 a 2 meses

CON REFERENCIA A SU VIVIENDA

Favor de hacer las preguntas H33 a H35 si ésta es una casa de una familia, que es propiedad o está siendo comprada, a menos que sea —

- Una casa móvil o remolque (trailer) .....
- Una casa ubicada en un predio de 3 cuerdas o más .....
- Una unidad en un condominio .....
- Una casa con establecimiento comercial u oficina médica en la propiedad .....

Si se trata de una de éstas, o si la unidad de vivienda es alquilada, o si ésta es una estructura multifamiliar, no haga las preguntas H33 a H35 y continúe en la página 6.

H33. ¿Cuánto fueron las contribuciones o impuestos sobre bienes raíces en esta propiedad el año pasado?

\$ .....00      Nada ☐

H34. ¿Cuál es la prima anual por concepto de seguro contra incendio y riesgos en esta propiedad?

\$ .....00      Nada ☐

H35a. ¿Tiene usted alguna hipoteca o deuda semejante sobre esta propiedad?

Sí, hipoteca o deuda semejante ☐

No — Pase a la página 6. ☐

b. ¿Tiene usted una segunda hipoteca u otro gravamen sobre esta propiedad?

☐ Sí      ☐ No

c. ¿Cuánto es su pago total mensual regular al prestamista?

Incluya también pagos de una segunda hipoteca u otros gravámenes sobre esta propiedad.

\$ .....00      No se requieren pagos regulares — Pase a la página 6. ☐

d. ¿Incluye su pago mensual regular (la cantidad anotada en la pregunta H35c) pagos por concepto de contribuciones o impuestos sobre bienes raíces en esta propiedad?

Sí, están incluidos en el pago mensual ☐

No, se pagan separadamente o no se pagan contribuciones ☐

e. ¿Incluye su pago mensual regular (la cantidad anotada en la pregunta H35c) pagos por concepto de seguro contra incendio y riesgos en esta propiedad?

Sí, están incluidos en el pago mensual ☐

No, se pagan separadamente o no tiene seguro ☐

Favor de pasar a la página 6. →

# 1980 Census of Population and Housing

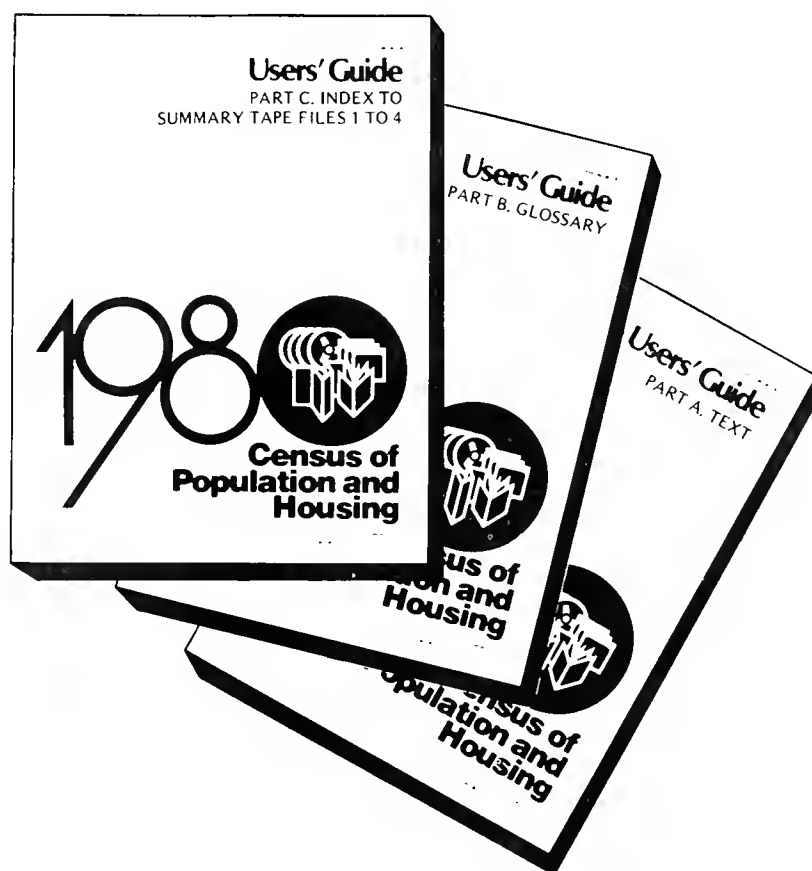

## Users' Guide

---

The Users' Guide, a reference work on the 1980 census, is now available. It consists of:

- **Part A. Text**—Covers census data subjects; geographic considerations; reports, tapes, maps, and other products; services available to users; and many other topics.
- **Part B. Glossary**—Provides detailed definitions of population, housing, geographic, and technical terms.
- **Part C. Index to Summary Tape Files 1 to 4**—Provides an index, subject-by-subject, to the hundreds of tables in the four major summary tape series. Tells which tables have the desired data and also provides complete descriptions for all tables in these STFs.
- **Sources of Assistance**—Furnishes addresses and phone numbers of public and private sector organizations offering a variety of products and services, such as tape processing, area profiles, training, and reference assistance.
- **Updates**—Provide "Part A. Text" revisions on new developments relating to the 1980 census.

Other parts, including an index to reports, are planned for publication later.

---

Order from Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Specify the stock numbers (S/N) given below and make check payable to Superintendent of Documents.

Part A. Text (S/N 003-024-03625-8)—\$5.50
